Table 7 - CVEnumPubsCommDataType Values

CVEnumPubsCommDataType Values	
Value	Documentation
IPv4	Internet Protocol version 4 'address'
IPv6	Internet Protocol version 6 'address'
WebAddress	The 'address' of a resource on the Internet or an intranet. Usually starts with the protocol (http://, https://, or other protocol), a domain name (sometimes called server name), file path, and resource name. (ex: http://www.qwert.com/local/daily/news.html).
Protocol	Protocol used for communication
Email	E-Mail address. Includes the group or individual address, the '@' separator, and mail domain. (ex. noone@qwert.com)
Port	Network port numbers
MobilePhone	Specialized type of dialed communications CommData object (specific type of 'Telephone'). Used for Cellular and other mobile devices (ex: satellite phones) that use dialing conventions, not landline phones that have 'wireless' handsets).
Telephone	For all references to telephone numbers when they appear in the narrative of a report as intelligence (not for contact or POC Information). Includes all 'parts' of a phone number: country code, area code, exchange, local number, extension, (etc). Requires the use of 'commDataNormalized' attribute to elaborate on a 'local' or 'national' structure and its international equivalent. 'Telephone' is used for all 'dialed' CommData objects unless they can be more specifically identified.

CVEnumPubsCommDataType Values	
Value	Documentation
Fax	Specialized type of dialed communications CommData object (specific type of 'Telephone'). A device/CommData object used primarily for facsimile, but can also have the capability of being used for voice communications. (A person's or organization's 'phone' number that is answered by a fax device, not by a person.)
Telex	Telex addresses
MalFile	Identification of various malicious files such as virus, 'bad' cookies, trojans, etc.

Chapter 8 - CVEnumPubsCountryISO3166Trigraph for PUBS

8.1 - Descriptive information

- Description: All ISO-3166 trigraphs that have ever been valid(up to ISO update newsletter VI-11). The number of terms in this CVE is greater than the number of terms in the ISO Country digraph and numeric code CVEs because those codes were frequently reused when a country entry became obsolete and no duplicate term values are included in any CVEs. Since each CVE term corresponds to a single CV entry, not all countries, which use identical codes, are named in the descriptions of these CVEs.
