Workbook
Introduction

The Privacy and Civil Liberties Implementation Workbook (the Workbook) is an additional tool designed to complement the Information Sharing Environment (ISE) Privacy and Civil Liberties Implementation Guide (the Guide). While the Guide provides an overall process for agencies to follow in implementing the ISE Privacy Guidelines, the Workbook provides practical, step-by-step assistance to individuals within federal agencies who will be tasked with implementing the Guidelines. It is also intended to serve as a “one-stop shop” of key guidance documents and tools for ISE Privacy Officials and privacy and civil liberties officers, providing important references in one convenient location.

The Workbook covers the implementation process from start to finish. However, much like the Guide, it is flexible in its application. It can be used in any order—in whole or in part—depending on where an agency is in its implementation of the Guidelines.

After completing the Workbook, an agency should have a written, complete ISE privacy protection policy. The Workbook will also help identify ongoing compliance and implementation issues for an agency to consider.

The Workbook is divided into five sections: Get Your Bearings; Identify What Your Agency Is Doing; Assemble Your Toolkit; Identify—Assess—Protect x 2; and Ongoing Implementation and Compliance. It also includes key guidance documents and tools, which are conveniently gathered together for ease of reference:

- Appendix A—ISE Privacy Guidelines
- Appendix C—Policy Development Tool
- Appendix D—Key Issues Guidance
- Appendix E—ISE Privacy Policy Outline
- Appendix F—Steps for Assessing Federal Agency Systems of Records
- Appendix G—Chart of Publicly Available Federal Privacy Policies
- Appendix H—ISE Privacy Guidelines Definitions
- Appendix I—ISE Privacy Guidelines Frequently Asked Questions
- Appendix J—Civil Rights and Civil Liberties Protection Guidance
- Appendix K—Resources Available on the ISE Web Site

Before starting, review the entire Workbook to become familiar with its organization and structure, and determine where your agency should begin. The review should help map out the steps, tasks, and

---

1 All references herein to federal agencies or federal departments and agencies are limited to federal executive branch departments and agencies.
decisions that still need to be undertaken, as well as the available resources which might be used to assist your agency’s implementation efforts. Agencies will most likely be at different starting points and stages/steps of implementation. Some agencies may be at the beginning, while other agencies may have already completed many of the tasks. Agencies should not feel the need to repeat or duplicate any activity that may satisfy a task or step.

Below is an overview of the resources and tools associated with the steps, tasks, and decision points in each section.

Section 1—Get Your Bearings. This section assists agency officials and personnel in understanding the ISE, the ISE Privacy Guidelines, and the requirement to implement them in order to enhance privacy and civil liberties protections in the sharing of terrorism-related information. One training presentation and two short documents are available to assist an agency in undertaking this section.

- **ISE 101**—This presentation provides a basic overview of the ISE, a discussion of the ISE Privacy Guidelines requirements, and the requirement to implement the Guidelines. This presentation could be part of a briefing for key stakeholders, including senior leadership, system administrators, operational personnel, and privacy/civil rights/civil liberties officials. Currently under development, it will contain a PowerPoint presentation and speaker notes.

- **How the ISE Privacy Guidelines Help Senior Leadership**—This document could be used as part of a briefing on the ISE and the Privacy Guidelines when an in-depth discussion on the topic is not needed. In addition, the companion piece for federal employees could also be used. Both documents are already posted on [www.ise.gov](http://www.ise.gov).

Section 2—Identify What Your Agency Is Doing. This section begins the process of identifying what a federal agency is currently doing within the ISE and identifying key personnel and program offices that may manage terrorism-related information. In addition, this section identifies several key decision points that an agency will need to consider before it moves forward. The determinations an agency makes will help map out how an agency proceeds.

Section 3—Assemble Your Toolkit. This section identifies tools and resources that will be needed in Section 4. These tools include:

- **ISE Privacy Guidelines**
- **ISE Privacy and Civil Liberties Implementation Manual**, including the **Implementation Guide** and the **Key Issues Guidance**

Section 4—Identify—Assess—Protect x 2. This section walks the user through the methodology outlined in the Implementation Guide. It provides practical additional information or suggestions and identifies where help is available, either through additional tools or via the information@AskPGC.org feature. As previously discussed in the Guide, STAGE I focuses on privacy/civil liberties officials and legal advisors, while STAGE II is oriented toward operational groups applying the ISE privacy policy to systems and sharing arrangements in the ISE.

STAGE I tools
- **2006 Interagency Compilation of Federal Privacy and Civil Liberties Policies That Impact Information Sharing**
- **Policy Development Tool**
ISE Privacy Policy Outline
Chart of Publicly Available Federal Privacy Policies

STAGE II tools
Steps for Assessing Federal Agency Systems of Records (Definitional Scope for the ISE Privacy Guidelines)

Section 5—Ongoing Implementation and Compliance. The final section addresses the continuing cycle of training on ISE issues and the ISE Privacy Guidelines, reviewing policies, applying the Guidelines to new systems, and tracking performance measures.

Appendices. Key guidance and tools have been included in the appendices so that important references are easily accessible.

Appendix A—I SE Privacy Guidelines: Issued in December 2006, the Guidelines provide the framework for enabling information sharing while protecting privacy and other legal rights.

Appendix B—2006 Interagency Compilation of Federal Privacy and Civil Liberties Policies That Impact Information Sharing: This compilation is the result of the initial data call for privacy and civil liberties laws, Executive Orders, policies, and procedures. This should not be viewed as an exhaustive list but as a starting point for agencies.

Appendix C—Policy Development Tool: This tool is designed to assist agencies conducting a review of existing policies and procedures compared to the ISE Privacy Guidelines requirements and to identify any gaps in policy coverage.

Appendix D—Key Issues Guidance: Developed and approved by the Privacy Guidelines Committee, this document offers guidance in interpreting certain ISE Privacy Guidelines requirements and outlines possible methods to assist agencies in implementing those requirements.

Appendix E—I SE Privacy Policy Outline: This tool is designed to assist agencies in developing their ISE privacy protection policy.

Appendix F—Steps for Assessing Federal Agency Systems of Records: Initially approved by the Privacy Guidelines Committee in May 2007, this definitional scope document provides federal agencies with a workable approach for applying the ISE Privacy Guidelines to systems of records that contain information within the scope of the ISE.

Appendix G—Chart of Publicly Available Federal Privacy Policies: This tool is a reference to existing published federal agency privacy policies.

Appendix J—Civil Rights and Civil Liberties Protection Guidance: Provides guidance on interpreting the ISE Privacy Guidelines requirements, considers how ISE participants’ information collection and subsequent use and sharing activities may implicate a person’s civil rights and civil liberties, and provides guidance on and examples of common civil rights and civil liberties issues that might be encountered by both federal and state, local, and tribal (SLT) ISE participants.

Appendix K—Resources Available on the ISE Web Site: A list of links to resources found on the various pages of the ISE Web site as of November 2008.

If at any point during this process a privacy official has questions or needs assistance, he or she should send an e-mail to information@AskPGC.org or call (202) 429-2712.

</table>
|           | Task—Understand the Information Sharing Environment (ISE) definition/concept. | - The ISE is an approach.  
- It is the policies, process/protocols, and technology that enable the sharing of terrorism-related information among federal, state, local, tribal, and private sector entities, as well as foreign partners, by federal agencies.  
- If you have questions,  
  o Consult the "ISE Privacy Guidelines Frequently Asked Questions" (FAQs), Appendix I.  
  o Consult your agency's representative on the Information Sharing Council (ISC).  
- Situational awareness:  
  o Information is being shared for counterterrorism and law enforcement purposes.  
  o Policies, process/protocols, and technology enable sharing.  
  o Do not wait for "a place or information system" to be built. |
|           | Task—Understand the requirements of the ISE Privacy Guidelines. | - Issued in December 2006.  
- Apply to existing and new or planned terrorism-related information sharing systems and sharing arrangements by federal agencies. |

### HELP AVAILABLE

<th>TASKS/DECISION POINTS</th>
<th>ADDITIONAL INFORMATION</th>
</tr>
</thead>
</table>
|           | Task—Identify who in your agency is key to implementing the ISE Privacy Guidelines. | • Representatives assigned to ISE bodies.  
• Program offices charged with sharing terrorism-related information.  
• Operators, analysts, managers, and others who deal with terrorism information.  
• Agency counsel who deal with civil liberties or civil rights issues raised by agency action.  
• If your agency has a compliance or complaint handling unit, consider a representative who might be able to identify any civil liberties/civil rights issues raised or complaints made by members of the public. |
|           | Task—Identify your agency's terrorism-related information sharing activities. | • Existing and planned.  
• However labeled ("ISE" or otherwise).  
Examples:  
MOUs  
Routine uses  
Bulk sharing  
Individualized requests |
|           | Task—Identify steps your agency already has taken toward establishing and implementing a privacy protection policy. | • Has an agency privacy protection policy been issued?  
• Does it extend to the ISE? |
<table>

</tbody>
</table>
|           | **Decision Point**—Determine whether your agency will have a single ISE privacy policy for the entire organization or whether each component will develop its own. | Agencies have several options:  
- Issue a global agency policy that is department-/agency-wide.  
- Issue a directive ordering all components to develop ISE-compliant policies specific to their organizations.  
  o An agency may have individual policies for various components.  
  ▪ Agencies may have a policy for components that do not significantly engage in ISE work, while directing other components that do engage in ISE work, to develop their own privacy policies. |
|           | **Decision Point**—Determine whether your agency will involve nongovernmental organizations, privacy advocates, an advisory board, or an internal working group in the policy development process. | While not required by the ISE Privacy Guidelines, agencies may choose to include others in their development or review process. It is useful to know this at the outset so appropriate interaction may be obtained at each stage of policy development.  
Agencies should be aware that consultation with elements outside the federal government may require compliance with the Federal Advisory Committee Act (FACA). |
|           | **Decision Point**—Determine how your agency will address public awareness of your ISE privacy protection policy. | Section 10 of the ISE Privacy Guidelines states: “Each agency shall take steps to facilitate appropriate public awareness of its policies and procedures for implementing these Guidelines.”  
Agencies may satisfy this requirement in any manner. Some may choose to post the policy on their Web site. Others may make it available upon request.  
Keep in mind that whatever mechanism is chosen may affect the format of the policy. |

<th>TASKS/DECISION POINTS</th>
<th>ADDITIONAL INFORMATION</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td><strong>1)</strong> Identify your agency process for approving/adopting a written ISE privacy protection policy.</td>
<td>This process may depend on how your agency decides to issue the policy; i.e., whether it is a new issuance (new content) versus a compilation of (incorporation by reference to) existing policies or a combination of approaches.</td>
</tr>
</tbody>
</table>
|           | **2)** Identify preparations that can be made at this stage to help the approval/adoption process move smoothly. | Examples of preparatory activities:  
- Meet with appropriate senior leadership and key stakeholders to ensure they understand the ISE, the Privacy Guidelines, and the requirement to implement an ISE privacy protection policy.  
- Obtain agreement on scope of policy to be issued: agency-wide, component-specific.  
- Develop an implementation plan outlining the process for developing the policy, identifying key components/stakeholders involved, and establishing a timeline for completion. |

### Task—Determining Format of Policy

<table>
<thead>
<tr>
<th>COMPLETED</th>
<th>TASKS/DECISION POINTS</th>
<th>ADDITIONAL INFORMATION</th>
</tr>
</thead>
</table>
|           | **1)** Determine how your agency will produce the policy.  
- Will it be a new policy?  
- Will it cross-reference existing policies?  
- Both? | From a format perspective, an agency must consider how to most effectively present the policy—to its employees and to the public.  
The written ISE privacy protection policy may cross-reference existing policies, reproduce existing policies, articulate new or revised policy provisions that fill gaps, or combine any or all of these approaches.  
Agencies should not rely on ISE processes for policies that require vetting and approval by another agency or body; e.g., policies implementing the requirements of Executive Order 12333. |

</tr>
</tbody>
</table>
| 1) Determine how your agency will produce the policy.  
  • Will it be a new policy?  
  • Will it cross-reference existing policies?  
  • Both? |  |
As noted in the Workbook Introduction and in the Guide, steps underlying the Identify—Assess—Protect methodology can be accomplished sequentially or concurrently.

Step 1 of STAGE I and Step 1 of STAGE II can be performed simultaneously, or STAGE II, Step 1 could be performed before STAGE I, Step 1. While the order is less important than the individual steps, it is not possible to complete STAGE II, Steps 2 and 3 without having completed the initial steps in each stage.

An agency may have already completed these activities—possibly as part of a different effort. If that is the case, the agency does not need to repeat or duplicate activities that will suffice to satisfy a step. If a part of a step has already been accomplished, only the remaining part of the step needs to be completed. How an agency produces a written ISE privacy protection policy and implements the Information Sharing Environment (ISE) Privacy Guidelines depends on its unique environment and circumstances. As long as a policy is developed, it is not mandatory that agencies follow the framework provided here or in the Guide.

Note: With each new system or sharing arrangement, STAGE II will need to be repeated to ensure the agency’s ISE privacy protection policy is met and the requirements incorporated into terrorism-related sharing activities. If new laws or Executive Orders are issued, STAGE I and STAGE II would need to be reviewed to ensure the new provisions are fully integrated into the policy and its application.

</tr>
</tbody>
</table>

This is the list of rules you will assess and compare to the ISE Privacy Guidelines to determine whether existing policies satisfy the ISE requirements or whether there are gaps to be filled.
### COMPLETED TASKS/DECISION POINTS

**STAGE I—Step 2: Assess existing protections and protections identified in the ISE Privacy Guidelines and identify gaps to be filled.**

1) To assess the adequacy of your agency's policies, compare the current policies with the requirements in the ISE Privacy Guidelines.

<table>
<thead>
<tr>
<th>TASKS/DECISION POINTS</th>
<th>ADDITIONAL INFORMATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Consider asking the following questions as part of the assessment process.</td>
<td></td>
</tr>
<tr>
<td>1) What legal authorities are controlling or relevant?</td>
<td></td>
</tr>
<tr>
<td>2) What information may or may not be collected?</td>
<td></td>
</tr>
<tr>
<td>3) How can information be collected?</td>
<td></td>
</tr>
<tr>
<td>4) Who is eligible to receive information that is collected?</td>
<td></td>
</tr>
<tr>
<td>a) Internally</td>
<td></td>
</tr>
<tr>
<td>b) Externally</td>
<td></td>
</tr>
<tr>
<td>5) What are the agency's transparency policies?</td>
<td></td>

<td>1) Determine whether your existing privacy protection policy extends to the sharing of protected information in the ISE.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>2) Determine whether your agency’s policies, protocols, and guidelines for information sharing do the following:</td>
<td></td>
</tr>
<tr>
<td></td>
<td>a) Define categories of information that may be shared.</td>
<td>For example—law enforcement agencies, intelligence agencies, private sector entities, and individuals who are the subjects of records.</td>
</tr>
<tr>
<td></td>
<td>b) Categorize entities or individuals with which/whom data may be shared, with appropriate restrictions for each.</td>
<td>Information sharing sources include systems of records/databases.</td>
</tr>
<tr>
<td></td>
<td>c) Identify information sources.</td>
<td>For example—software applications or other media, such as telephone, e-mail, etc.</td>
</tr>
<tr>
<td></td>
<td>d) Identify information sharing methods.</td>
<td>See above.</td>
</tr>
<tr>
<td></td>
<td>e) Describe how sharing requests may be received.</td>
<td>For example—review, redaction, formatting.</td>
</tr>
<tr>
<td></td>
<td>f) Describe what processing must be conducted prior to sharing.</td>
<td>For example—encryption, deidentification/anonymization, documentation of disclosures, and auditing of releases.</td>
</tr>
<tr>
<td></td>
<td>g) Describe information sharing-related protocols.</td>
<td></td>
</tr>
</tbody>
</table>
### TASKS/DECISION POINTS | STILL TO DO
--- | ---

**STAGE I—Step 3: Develop or document an agency ISE privacy protection policy.**

1) Determine whether your existing privacy protection policy extends to the sharing of protected information in the ISE.

2) Determine whether your agency’s policies, protocols, and guidelines for information sharing do the following:
   - **a)** Define categories of information that may be shared.
   - **b)** Categorize entities or individuals with which/whom data may be shared, with appropriate restrictions for each.
   - **c)** Identify information sources.
   - **d)** Identify information sharing methods.
   - **e)** Describe how sharing requests may be received.
   - **f)** Describe what processing must be conducted prior to sharing.
   - **g)** Describe information sharing-related protocols.

<td><strong>Stage I</strong>—Step 3: Develop or document an agency ISE privacy protection policy.</td>
<td>Consider whether the agreement addresses the following elements in order to determine whether existing policy meets ISE Privacy Guidelines requirements. Does the agreement:</td>
<td></td>
</tr>
<tr>
<td>3)</td>
<td>Determine whether your agency information sharing policy is reflected in your information sharing arrangements.</td>
<td>a) Identify the parties to the agreement and their authorities (e.g., requester/receiver and sender)?</td>
</tr>
<tr>
<td></td>
<td>• Does the memorandum of understanding (MOU) or other agreement give effect to the ISE privacy protection policy?</td>
<td>b) Require privacy and civil liberties protections (e.g., encryption, limited use, data retention, notice and consent of data subjects where applicable, minimum necessary disclosure, and redress, including corrective measures, such as notice to receiving agencies, for erroneous or defective classified or other protected materials)?</td>
</tr>
<tr>
<td></td>
<td></td>
<td>c) Require security protections (e.g., firewalls, intrusion detection systems, physical security, training and awareness of staff, and personnel authorization and authentication)?</td>
</tr>
<tr>
<td></td>
<td></td>
<td>d) Specify applicable laws and regulations (including exemptions therefrom)?</td>
</tr>
<tr>
<td></td>
<td></td>
<td>e) Provide notice regarding the nature of the information, including limitations on reliability and accuracy?</td>
</tr>
<tr>
<td></td>
<td></td>
<td>f) Provide for monitoring/auditing responsibilities of sender and receiver (e.g., methods, frequency, roles and responsibilities, and remediation of deficiencies)?</td>
</tr>
<tr>
<td></td>
<td></td>
<td>g) Address any potential intersection with state law?</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Sunshine laws</td>
</tr>

</tr>
</tbody>
</table>
### STAGE I—Step 3: Develop or document an agency ISE privacy protection policy.

(continued)

#### 4) Determine whether your policy provides for:

- **a)** Inspection/audit of compliance with privacy and civil liberties policies and procedures.
- **b)** Prompt reporting of noncompliance with ISE privacy and civil liberties procedures.
- **c)** A mechanism to respond to incidents of noncompliance, including sanctions for individuals who negligently or willfully violate policy.

#### Example:

1) **Review of computer matching and other data merges for implications under the Privacy Act; e.g., to identify needed systems of records notices and ensure application of data accuracy, completeness, and timeliness controls, as necessary.**

2) **Review of complaint processing procedures to ensure that:**
   - Erroneous, deficient, or court-expunged information is being addressed properly.
   - The redress procedure is publicly known.
   - Civil rights/civil liberties (CR/CL) complaints are recognized and properly addressed.

Examples of potential CR/CL complaints based on inaccurate or erroneous information include issues such as:

- Individuals being denied benefits and privileges such as restrictions on travel.
- Access to certain facilities.
- Loss of a job.
- Being stopped and searched based on incorrect information submitted to law enforcement agencies.

3) **Review of policies and procedures to determine whether there are triggers for effective notice to receiving agencies when protected information is discovered to be inaccurate or deficient and may cause harm to the individual if not corrected or deleted.**

<tbody>
<tr>
<td></td>
<td><strong>STAGE I—Step 3: Develop or document an agency ISE privacy protection policy.</strong> (continued)</td>
<td>See Appendix E of the Workbook; the ISE Privacy Policy Outline provides a format to assist an agency in formulating its ISE privacy protection policy.</td>
</tr>
<tr>
<td></td>
<td>5) If your agency has developed new policies to fill identified gaps, determine whether the new policies and/or procedures identify:</td>
<td></td>
</tr>
<tr>
<td></td>
<td>a) The relevant federal laws, regulations, guidelines, interagency agreements or rules, policies, or other agency-specific directives driving each requirement, especially those restricting data sharing.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>b) The specific mandate action or end state.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>c) Any exemptions to each requirement that the agency may invoke or has invoked, if applicable.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>d) The specific officials and personnel affected by the requirement and those responsible for implementing and overseeing the requirement.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>e) The particular detailed procedures to be followed by each category of affected staff, including enforcement and assurance responsibilities.</td>
<td></td>
</tr>
</tbody>
</table>

After completing this stage, you will have produced a written ISE privacy protection policy. Remember, an agency may complete this stage by ensuring that existing policies or procedures are sufficient to meet the requirements of the ISE Privacy Guidelines, by developing new policies to fill any gaps between existing policies and the requirements of the Guidelines, or by some combination of existing or new policies.
### TASKS/DECISION POINTS

#### STAGE I—Step 3: Develop or document an agency ISE privacy protection policy.

(continued)

5) If your agency has developed new policies to fill identified gaps, determine whether the new policies and/or procedures identify:
   - a) The relevant federal laws, regulations, guidelines, interagency agreements or rules, policies, or other agency-specific directives driving each requirement, especially those restricting data sharing.
   - b) The specific mandate action or end state.
   - c) Any exemptions to each requirement that the agency may invoke or has invoked, if applicable.
   - d) The specific officials and personnel affected by the requirement and those responsible for implementing and overseeing the requirement.
   - e) The particular detailed procedures to be followed by each category of affected staff, including enforcement and assurance responsibilities.

### STILL TO DO

After completing this stage, you will have produced a written ISE privacy protection policy. Remember, an agency may complete this stage by ensuring that existing policies or procedures are sufficient to meet the requirements of the ISE Privacy Guidelines, by developing new policies to fill any gaps between existing policies and the requirements of the Guidelines, or by some combination of existing or new policies.
### STAGE II—Step 1: Identify systems and sharing arrangements in the ISE.

<th>TASKS/DECISION POINTS</th>
<th>ADDITIONAL INFORMATION</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td><strong>1)</strong> Determine whether your agency has identified the systems and sharing arrangements that contain protected information that is or will be shared through the ISE.</td>
<td>For Information Sharing Council/Privacy Guidelines Committee member agencies, consider using the Green Pages as a starting point. The Green Pages are a self-identified list, initially requested by the Program Manager's Office (PM) in an effort to determine the scope of systems of records, databases, or data sets (herein referred to as systems) that contain terrorism information that would be shared in the Information Sharing Environment.</td>
</tr>
<tr>
<td></td>
<td><strong>2)</strong> Determine whether your agency has categorized its information systems/data sets, identifying which systems/data sets contain terrorism-related information? Did your agency use the PGC-approved Definitional Scope scheme, which categorizes information according to the adjacent column? If not, how is it categorized?</td>
<td>“Suggested Initial Steps for Applying the Information Sharing Environment Privacy Guidelines—Assessing Federal Agency Systems of Records”: Found in Appendix F of this Workbook, this definitional scope paper suggests steps for applying the ISE Privacy Guidelines to agency systems (&quot;systems&quot; used herein refers to information systems, databases, and data sets, as appropriate) containing protected information within the scope of the ISE (also available at <a href="http://www.ise.gov">www.ise.gov</a>). TRI is terrorism-related information as defined by the ISE Privacy Guidelines. For specific definitions, see the “ISE Privacy Guidelines Definitions,” Appendix H.</td>
</tr>
</tbody>
</table>
### TASKS/DECISION POINTS

**STAGE II—Step 1: Identify systems and sharing arrangements in the ISE.**

<table>
<thead>
<tr>
<th>STILL TO DO</th>
</tr>
</thead>
<tbody>
<tr>
<td>1) Determine whether your agency has identified the systems and sharing arrangements that contain protected information that is or will be shared through the ISE.</td>

<tr>
<td>-----------</td>
</tr>
</tbody>
</table>
|           | 3) Determine whether your agency has identified the risk environment and associated risk-based protections that are warranted in the sharing of the information through the ISE. | Risk environment questions might include the following:
|           |                       | a) Does the system/database contain sensitive information that is subject to specialized protections (e.g., personally identifiable information that reveals medical, financial, or religious information)?
|           |                       | b) What specific protections must each category of information receive under legal, regulatory, or contractual obligations?
|           |                       | c) What information privacy policies and practices are applied?
|           |                       | d) Do exemptions from privacy protections that otherwise might apply continue to apply if the information is shared through the ISE?
|           |                       | e) What is the likelihood that the data will be shared through the ISE?
|           |                       | f) How could each category of information under consideration be exploited if it were inappropriately disclosed, accessed, or intercepted?
|           |                       | g) What harms would result to an individual if protected information were inappropriately disclosed, accessed, or intercepted?
|           |                       | h) What is the magnitude of the harm that could result from misuse of the information, whether the harm is to an individual, an organization, or larger interests, such as those of the United States?
|           |                       | i) Who might be interested in inappropriately accessing, transmitting, or receiving each type of information, both inside and outside the agency maintaining it?
|           |                       | j) If the information is shared with state agencies subject to state freedom of information or sunshine laws, might this information be made public?
|           |                       | k) What harm might result from the inclusion or sharing of erroneous, misleading, or deficient information—to the individuals who are the subject of the information—to the agency? |

This is the list of systems/sharing arrangements to be assessed using your agency’s ISE privacy policy to determine whether all the requirements are addressed or whether gaps need to be filled. The information in systems subject to the identified sharing arrangements should be handled consistently with all policies and procedures set forth by the agency’s new/consolidated privacy policy. Where procedures do not satisfy the policy requirements, new measures must be implemented.
### STAGE II—Step 1: Identify systems and sharing arrangements in the ISE.

3) Determine whether your agency has identified the risk environment and associated risk-based protections that are warranted in the sharing of the information through the ISE.

This is the list of systems/sharing arrangements to be assessed using your agency’s ISE privacy policy to determine whether all the requirements are addressed or whether gaps need to be filled. The information in systems subject to the identified sharing arrangements should be handled consistently with all policies and procedures set forth by the agency’s new/consolidated privacy policy. <td><strong>STAGE II—Step 2: Assess identified systems to ensure that the protected information is covered by the ISE privacy protection policy.</strong> (continued)</td>
<td></td>
</tr>
<tr>
<td></td>
<td>3) Your agency should examine practices relating to each system and sharing arrangement to determine whether they are consistent with the agency’s written ISE privacy protection policy. Where procedures do not satisfy the policy requirements, new measures must be implemented.</td>
<td>In each case, evaluate whether:</td>
</tr>
<tr>
<td></td>
<td></td>
<td>a) The notice mechanisms to ensure that information is handled in accordance with applicable legal requirements are applied to each system/sharing arrangement.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>b) The agency’s data-quality procedures designed to ensure accuracy, timely correction (including court-expunged information), and appropriate retention of data are applied to each system/sharing arrangement, consistent with agency authorities.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>c) The agency’s data security procedures designed to safeguard protected information are applied to each system/sharing arrangement, as appropriate.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>d) The agency’s enforcement procedures designed to hold personnel accountable, ensure that staff are trained, and conduct compliance reviews and audits are applied to each system/sharing arrangement.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>e) The agency’s transparency and redress procedures designed to inform the public of agency policies for addressing complaints regarding information under agency control are in place for each system/sharing arrangement and the procedures are effective.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>f) The agency has a procedure to trigger corrective procedures, including effective notice to receiving agencies upon discovery that protected information is erroneous or deficient and may cause harm if not corrected or deleted.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>g) If a terrorism-related information system contains state arrest records, does the agency have a procedure in place that defines how a federal agency recipient of information that is subject to court-ordered expungement will be notified of that order, to ensure that the information was deleted, and will notify any other ISE participants with which it has shared that information.</td>
</tr>
</tbody>
</table>

Completing this step ensures that the agency’s ISE privacy protection policy is applied to each system and sharing arrangement identified in the ISE.

</tr>
</tbody>
</table>

Completing this step ensures that the agency’s ISE privacy protection policy is applied to each system and the sharing arrangement identified in the ISE.
### STAGE II—Step 3: Protect systems and information shared in the ISE by conducting and documenting an agency’s actions.

1. Your agency may consider putting in place a policy that implements required protections for the system.

2. Your agency may consider putting in place procedures that address reporting, investigating, and responding to violations of privacy protection policies. Having a reporting/notification procedure in place for violations of agency protection policies is expected to be a performance measurement for FY09.3

3. Your agency may consider putting in place audit and enforcement mechanisms for systems implicated by the ISE. The number of audits and enforcement actions is expected to be a performance measurement in FY09.4

4. Your agency may consider providing ISE training to personnel authorized to access protected information; training should include procedures for reporting violations of agency privacy and civil liberties protection policies. The number of personnel trained in the agency’s ISE privacy protection policy is expected to be a performance measurement in FY09.5

5. Your agency may consider establishing procedures to facilitate compliance with audits and review of agency ISE-related activities.

6. Your agency should designate an ISE privacy official6 to receive reports (or copies) regarding alleged errors in protected information that originates from the agency.

Completion of this step should allow an agency to demonstrate its implementation and compliance with the ISE Privacy Guidelines.

---

3 Anticipated OMB requirement.
4 Anticipated OMB requirement.
5 Anticipated OMB requirement.
6 Defined by section 12a of the ISE Privacy Guidelines to be the designated senior agency official with overall agency-wide responsibility for information privacy issues. An agency may decide to identify both a privacy official and a civil rights/civil liberties official.

*The ISE Privacy Guidelines were released on December 4, 2006.*
Guidelines to Ensure that the Information Privacy and Other Legal Rights of Americans are Protected in the Development and Use of the Information Sharing Environment

1. Background and Applicability.

   a. Background. Section 1016(d) of the Intelligence Reform and Terrorism Prevention Act of 2004 (IRTPA) calls for the issuance of guidelines to protect privacy and civil liberties in the development and use of the “information sharing environment” (ISE). Section 1 of Executive Order 13388, Further Strengthening the Sharing of Terrorism Information to Protect Americans, provides that, “[t]o the maximum extent consistent with applicable law, agencies shall … give the highest priority to … the interchange of terrorism information among agencies … [and shall] protect the freedom, information privacy, and other legal rights of Americans in the conduct of [such] activities ....” These Guidelines implement the requirements under the IRTPA and EO 13388 to protect information privacy rights and provide other legal protections relating to civil liberties and the legal rights of Americans in the development and use of the ISE.

   b. Applicability. These Guidelines apply to information about United States citizens and lawful permanent residents that is subject to information privacy or other legal protections under the Constitution and Federal laws of the United States (“protected information”). For the intelligence community, protected information includes information about “United States persons” as defined in Executive Order 12333. Protected information may also include other information that the U.S. Government expressly determines by Executive Order, international agreement, or other similar instrument, should be covered by these Guidelines.

2. Compliance with Laws.

   a. General. In the development and use of the ISE, all agencies shall, without exception, comply with the Constitution and all applicable laws and Executive Orders relating to protected information.

   b. Rules Assessment. Each agency shall implement an ongoing process for identifying and assessing the laws, Executive Orders, policies, and procedures that apply to the protected information that it will make available or access through the ISE. Each agency shall identify, document, and comply with any legal restrictions applicable to such information. Each agency shall adopt internal policies and procedures requiring it to:
(i) only seek or retain protected information that is legally permissible for the agency to seek or retain under the laws, regulations, policies, and executive orders applicable to the agency; and

(ii) ensure that the protected information that the agency makes available through the ISE has been lawfully obtained by the agency and may be lawfully made available through the ISE.

c. Changes. If, as part of its rules assessment process, an agency:

(i) identifies an issue that poses a significant risk to information privacy rights or other legal protections, it shall as appropriate develop policies and procedures to provide protections that address that issue;

(ii) identifies a restriction on sharing protected information imposed by internal agency policy, that significantly impedes the sharing of terrorism information, homeland security information, or law enforcement information (as defined in Section 13 below) in a manner that does not appear to be required by applicable laws or to protect information privacy rights or provide other legal protections, it shall review the advisability of maintaining such restriction;

(iii) identifies a restriction on sharing protected information, other than one imposed by internal agency policy, that significantly impedes the sharing of information in a manner that does not appear to be required to protect information privacy rights or provide other legal protections, it shall review such restriction with the ISE Privacy Guidelines Committee (described in Section 12 below), and if an appropriate internal resolution cannot be developed, bring such restriction to the attention of the Attorney General and the Director of National Intelligence (DNI). The Attorney General and the DNI shall review any such restriction and jointly submit any recommendations for changes to such restriction to the Assistant to the President for Homeland Security and Counterterrorism, the Assistant to the President for National Security Affairs, and the Director of the Office of Management and Budget for further review.

Protected information should be shared through the ISE only if it is terrorism information, homeland security information, or law enforcement information (as defined in Section 13 below). Each agency shall adopt internal policies and procedures requiring it to ensure that the agency’s access to and use of protected
information available through the ISE is consistent with the authorized purpose of the ISE.

4. Identification of Protected Information to be Shared through the ISE.

a. Identification and Prior Review. In order to facilitate compliance with these Guidelines, particularly Section 2 (Compliance with Laws) and Section 3 (Purpose Specification), each agency shall identify its data holdings that contain protected information to be shared through the ISE, and shall put in place such mechanisms as may be reasonably feasible to ensure that protected information has been reviewed pursuant to these Guidelines before it is made available to the ISE.

b. Notice Mechanisms. Consistent with guidance and standards to be issued for the ISE, each agency shall put in place a mechanism for enabling ISE participants to determine the nature of the protected information that the agency is making available to the ISE, so that such participants can handle the information in accordance with applicable legal requirements. Specifically, such a mechanism will, to the extent reasonably feasible and consistent with the agency’s legal authorities and mission requirements, allow for ISE participants to determine whether:

(i) the information pertains to a United States citizen or lawful permanent resident;

(ii) the information is subject to specific information privacy or other similar restrictions on access, use or disclosure, and if so, the nature of such restrictions; and

(iii) there are limitations on the reliability or accuracy of the information.

5. Data Quality.

a. Accuracy. Each agency shall adopt and implement procedures, as appropriate, to facilitate the prevention, identification, and correction of any errors in protected information with the objective of ensuring that such information is accurate and has not erroneously been shared through the ISE.

b. Notice of Errors. Each agency, consistent with its legal authorities and mission requirements, shall ensure that when it determines that protected information originating from another agency may be erroneous, includes incorrectly merged information, or lacks adequate context such that the rights of the individual may be affected, the potential error or deficiency will be communicated in writing to
the other agency’s ISE privacy official (the ISE privacy officials are described in section 12 below).

c. Procedures. Each agency, consistent with its legal authorities and mission requirements, shall adopt and implement policies and procedures with respect to the ISE requiring the agency to:

(i) take appropriate steps, when merging protected information about an individual from two or more sources, to ensure that the information is about the same individual;

(ii) investigate in a timely manner alleged errors and deficiencies and correct, delete, or refrain from using protected information found to be erroneous or deficient; and

(iii) retain protected information only so long as it is relevant and timely for appropriate use by the agency, and update, delete, or refrain from using protected information that is outdated or otherwise irrelevant for such use.

Each agency shall use appropriate physical, technical, and administrative measures to safeguard protected information shared through the ISE from unauthorized access, disclosure, modification, use, or destruction.

7. Accountability, Enforcement and Audit.

a. Procedures. Each agency shall modify existing policies and procedures or adopt new ones as appropriate, requiring the agency to:

(i) have and enforce policies for reporting, investigating, and responding to violations of agency policies relating to protected information, including taking appropriate action when violations are found;

(ii) provide training to personnel authorized to share protected information through the ISE regarding the agency’s requirements and policies for collection, use, and disclosure of protected information, and, as appropriate, for reporting violations of agency privacy-protection policies;

(iii) cooperate with audits and reviews by officials with responsibility for providing oversight with respect to the ISE; and
(iv) designate each agency’s ISE privacy official to receive reports (or copies thereof if the agency already has a designated recipient of such reports) regarding alleged errors in protected information that originate from that agency.

b. Audit. Each agency shall implement adequate review and audit mechanisms to enable the agency’s ISE privacy official and other authorized officials to verify that the agency and its personnel are complying with these Guidelines in the development and use of the ISE.

8. Redress.

To the extent consistent with its legal authorities and mission requirements, each agency shall, with respect to its participation in the development and use of the ISE, put in place internal procedures to address complaints from persons regarding protected information about them that is under the agency’s control.

a. Execution. The ISE privacy official shall be responsible for ensuring that protections are implemented as appropriate through efforts such as training, business process changes, and system designs.

b. Training. Each agency shall develop an ongoing training program in the implementation of these Guidelines, and shall provide such training to agency personnel participating in the development and use of the ISE.

c. Technology. Where reasonably feasible, and consistent with standards and procedures established for the ISE, each agency shall consider and implement, as appropriate, privacy enhancing technologies including, but not limited to, permissioning systems, hashing, data anonymization, immutable audit logs, and authentication.

10. Awareness.

Each agency shall take steps to facilitate appropriate public awareness of its policies and procedures for implementing these Guidelines.

Consistent with any standards and procedures that may be issued to govern participation in the ISE by State, tribal, and local governments and private sector entities, the agencies and the PM-ISE will work with non-Federal entities seeking to
access protected information through the ISE to ensure that such non-Federal entities develop and implement appropriate policies and procedures that provide protections that are at least as comprehensive as those contained in these Guidelines.

a. ISE Privacy Officials. Each agency’s senior official with overall agency-wide responsibility for information privacy issues (as designated by statute or executive order, or as otherwise identified in response to OMB Memorandum M-05-08 dated February 11, 2005), shall directly oversee the agency’s implementation of and compliance with these Guidelines (the “ISE privacy official”). If a different official would be better situated to perform this role, he or she may be so designated by the head of the agency. The ISE privacy official role may be delegated to separate components within an agency, such that there could be multiple ISE privacy officials within one executive department. The ISE privacy official shall be responsible for ensuring that (i) the agency’s policies, procedures, and systems are appropriately designed and executed in compliance with these Guidelines, and (ii) changes are made as necessary. The ISE privacy official should be familiar with the agency’s activities as they relate to the ISE, possess all necessary security clearances, and be granted the authority and resources, as appropriate, to identify and address privacy and other legal issues arising out of the agency’s participation in the ISE. Such authority should be exercised in coordination with the agency’s senior ISE official.

b. ISE Privacy Guidelines Committee. All agencies will abide by these Guidelines in their participation in the ISE. The PM shall establish a standing “ISE Privacy Guidelines Committee” to provide ongoing guidance on the implementation of these Guidelines, so that, among other things, agencies follow consistent interpretations of applicable legal requirements, avoid duplication of effort, share best practices, and have a forum for resolving issues on an inter-agency basis. The ISE Privacy Guidelines Committee is not intended to replace legal or policy guidance mechanisms established by law, executive order, or as part of the ISE, and will as appropriate work through or in consultation with such other mechanisms. The ISE Privacy Guidelines Committee shall be chaired by the PM or a senior official designated by the PM, and will consist of the ISE privacy officials of each member of the Information Sharing Council. If an issue cannot be resolved by the ISE Privacy Guidelines Committee, the PM will address the issue through the established ISE governance process. The ISE Privacy Guidelines Committee should request legal or policy guidance on questions relating to the implementation of these Guidelines from those agencies having responsibility or authorities for issuing guidance on such questions; any such requested guidance shall be provided promptly by the appropriate agencies. As the ISE governance process evolves, if a different entity is established or identified that could more
effectively perform the functions of the ISE Privacy Guidelines Committee, the ISE Privacy Guidelines Committee structure shall be modified by the PM through such consultation and coordination as may be required by the ISE governance process, to ensure the functions and responsibilities of the ISE Privacy Guidelines Committee remain priorities fully integrated into the overall ISE governance process.

c. Privacy and Civil Liberties Oversight Board. The Privacy and Civil Liberties Oversight Board (PCLOB) should be consulted for ongoing advice regarding the protection of privacy and civil liberties in agencies’ development and use of the ISE. To facilitate the performance of the PCLOB’s duties, the ISE Privacy Guidelines Committee will serve as a mechanism for the PCLOB to obtain information from agencies and to provide advice and guidance consistent with the PCLOB’s statutory responsibilities. Accordingly, the ISE Privacy Guidelines Committee should work in consultation with the PCLOB, whose members may attend Committee meetings, provide advice, and review and comment on guidance as appropriate.

d. ISE Privacy Protection Policy. Each agency shall develop and implement a written ISE privacy protection policy that sets forth the mechanisms, policies, and procedures its personnel will follow in implementing these Guidelines. Agencies should consult with the ISE Privacy Guidelines Committee as appropriate in the development and implementation of such policy.

a. Definitions.

(i) The term “agency” has the meaning set forth for the term “executive agency” in section 105 of title 5, United States Code, but includes the Postal Rate Commission and the United States Postal Service and excludes the Government Accountability Office.

(ii) The term “protected information” has the meaning set forth for such term in paragraph 1(b) of these Guidelines.

(iii) The terms “terrorism information,” “homeland security information,” and “law enforcement information” are defined as follows:

“Terrorism information,” consistent with section 1016(a)(4) of IRTPA means all relating to (A) the existence, organization, capabilities, plans, intentions, vulnerabilities, means of finance or material support, or activities of foreign or international terrorist groups or individuals, or of
domestic groups or individuals involved in transnational terrorism, (B) threats posed by such groups or individuals to the United States, United States persons, or United States interests, or to those of other nations, (C) communications of or by such groups or individuals, or (D) groups or individuals reasonably believed to be assisting or associated with such groups or individuals.

“Homeland security information,” as derived from section 482(f)(1) of the Homeland Security Act of 2002, means any information possessed by a Federal, State, local, or tribal agency that relates to (A) a threat of terrorist activity, (B) the ability to prevent, interdict, or disrupt terrorist activity, (C) the identification or investigation of a suspected terrorist or terrorist organization or any person, group, or entity associated with or assisting a suspected terrorist or terrorist organization, or (D) a planned or actual response to a terrorist act.

“Law enforcement information” for the purposes of the ISE means any information obtained by or of interest to a law enforcement agency or official that is (A) related to terrorism or the security of our homeland and (B) relevant to a law enforcement mission, including but not limited to information pertaining to an actual or potential criminal, civil, or administrative investigation or a foreign intelligence, counterintelligence, or counterterrorism investigation; assessment of or response to criminal threats and vulnerabilities; the existence, organization, capabilities, plans, intentions, vulnerabilities, means, methods, or activities of individuals or groups involved or suspected of involvement in criminal or unlawful conduct or assisting or associated with criminal or unlawful conduct; the existence, identification, detection, prevention, interdiction, or disruption of, or response to, criminal acts and violations of the law; identification, apprehension, prosecution, release, detention, adjudication, supervision, or rehabilitation of accused persons or criminal offenders; and victim/witness assistance.

b. The treatment of information as “protected information” under these Guidelines does not by itself establish that the individual or entity to which such information pertains does in fact have information privacy or other legal rights with respect to such information.

c. Heads of executive departments and agencies shall, to the extent permitted by law and subject to the availability of appropriations, provide the cooperation, assistance, and information necessary for the implementation of these Guidelines.
d. These Guidelines:

(i) shall be implemented in a manner consistent with applicable laws and executive orders, including Federal laws protecting the information privacy rights and other legal rights of Americans, and subject to the availability of appropriations;

(ii) shall be implemented in a manner consistent with the statutory authority of the principal officers of executive departments and agencies as heads of their respective departments or agencies;

(iii) shall not be construed to impair or otherwise affect the functions of the Director of the Office of Management and Budget relating to budget, administrative, and legislative proposals; and

(iv) are intended only to improve the internal management of the Federal Government and are not intended to, and do not, create any rights or benefits, substantive or procedural, enforceable at law or in equity by a party against the United States, its departments, agencies, or entities, its officers, employees, or agencies, or any other person.
Page is intentionally left blank.
*This document was prepared by the Interagency Working Group tasked with preparing the ISE Privacy Guidelines. The research identified 109 sets of rules set forth herein. This list is not exhaustive but may serve as a starting point for agencies to identify the laws and policies applicable to ISE information.

<td>Statute</td>
<td>Prohibits disclosure of tax return or return information (very broad definition) by any officer or employee of the United States, state or local law enforcement agency, local child support enforcement agency, or &quot;other person&quot; as defined, except as provided by the provision.</td>
<td>Two of the exceptions apply to the release of terrorist-related information to federal intelligence agencies. Pursuant to section 6103(i)(7)(B), the Secretary of the Treasury may, upon written request, disclose return information (other than information furnished by or on behalf of the taxpayer directly) to federal intelligence agencies that are engaged in the collection or analysis of intelligence and counterintelligence information or investigation concerning any terrorist incident, threat, or activity. In addition, section 6103(i)(7)(C) permits the disclosure of returns and return information to federal intelligence agencies pursuant to an ex parte order by a federal judge. The unauthorized disclosure of returns and return information is subject to civil and criminal sanctions under IRC sections 7431 and 7213. Section 6103 does not differentiate between U.S. and non-U.S. persons with respect to the sharing or release of taxpayer information.</td>

<td>Guidelines for FBI National Security Investigations and Foreign Intelligence Collection</td>
<td>Guidelines state as a “general principle” that “the FBI shall provide information expeditiously to other agencies in the Intelligence Community, so that these agencies can take action in a timely manner to protect the national security in accordance with their lawful functions.” AG Guidelines also state that consistent with this overriding priority, the FBI shall act in a manner to protect, to the greatest extent possible . . . other significant interests, including the protection of intelligence and sensitive law enforcement sources and methods, other classified information, and sensitive operational and prosecutorial information. Affirms the MOU on Homeland Security Information Sharing. Authorizes sharing with foreign authorities when in the national security interest but requires that the FBI consider the reasonably expected effect on any identifiable U.S. person.</td>
<td>Yes—FBI counterintelligence and foreign intelligence information collected under the AG Guidelines, including information acquired in “National Security Investigations” concerning U.S. persons, may be shared with other IC components so they can determine relevance to their responsibilities. However, sharing may be limited to protect security, operational, and prosecutorial interests. In addition, sharing with foreign authorities requires considering the effect on any identifiable U.S. person.</td>

Appendix C
Policy Development Tool
Information Sharing Environment (ISE) Policy Development Tool

Background: The ISE Privacy Guidelines require federal agencies to develop and implement a written ISE privacy protection policy that sets forth agency mechanisms, policies, and procedures for implementing the ISE Privacy Guidelines.7

Purpose: The purpose of this tool is to provide federal agencies with a resource to utilize when developing their ISE privacy protection policy. This tool is associated with STAGE I, Step 2 and Step 3 of the Privacy and Civil Liberties Implementation Guide. It is designed to assist agencies in assessing existing policies and procedures compared to the ISE Privacy Guidelines requirements and, from that assessment, identify gaps in policy. Upon completion, the Development Tool should assist agencies in writing their ISE privacy protection policy by (1) having existing policies—references and text—that can be “pasted” into the new policy, (2) knowing what gaps in policy need to be filled, and (3) knowing what is necessary to meet a particular ISE Privacy Guidelines requirement, thereby helping the agency to write a new policy that meets the particular requirement.

Instructions:

- The first column identifies the ISE Privacy Guidelines requirement and required agency policy and procedure responsibilities, as specified in the Guidelines. The requirements are bolded to clearly identify what is required by agencies.

- The second column provides core policy and procedure elements that, if implemented by an agency, demonstrate compliance with the associated Guidelines requirement. If the column has an “N/A,” there is no associated core element. Agencies should refer to Appendix D—Key Issues Guidance for additional guidance in complying with the associated core element.

- The third column is for agencies to cite to a document(s) in which the Guidelines requirement is fulfilled, in whole or in part, by preexisting agency policies and procedures. It is recommended that the policy and procedure language and reference be reproduced in this column to ensure a comprehensive and accurate ISE privacy protection policy. If the policy cited or set forth in this column wholly meets the ISE Privacy Guidelines requirements, then the next column should be blank.

- The last column is for agencies to “fill in” with new, revised, or additional policies and procedures that adhere to the corresponding ISE Privacy Guidelines requirement, if the agency does not have a preexisting agency policy in place.

- Once the Policy Development Tool is complete, transfer the information to Appendix E—ISE Privacy Policy Outline to produce the written ISE privacy protection policy. An agency should utilize its normal process for obtaining agency approval for the issuance of the policy.

<td><strong>12a. ISE Privacy Officials.</strong> Each agency’s senior official with overall agency-wide responsibility for information privacy issues (as designated by statute or executive order, or as otherwise identified in response to OMB Memorandum M-05-08 dated February 11, 2005), shall directly oversee the agency’s implementation of and compliance with the Guidelines (the “ISE privacy official”). If a different official would be better situated to perform this role, he or she may be so designated by the head of the agency. The ISE privacy official role may be delegated to separate components within an agency, such that there could be multiple ISE privacy officials within one executive department. The ISE privacy official shall be responsible for ensuring that (i) the agency’s policies, procedures, and systems are appropriately designed and executed in compliance with these Guidelines, and (ii) changes are made as necessary. The ISE privacy official should be familiar with the agency’s activities as they relate to the ISE, possess all necessary security clearances, and be granted the authority and resources, as appropriate, to identify and address privacy and other legal issues arising out of the agency’s participation in the ISE. Such authority should be exercised in coordination with the agency’s senior ISE official.</td>

Guidance Papers Outline

Background
- The guidance papers in these sections provide additional in-depth guidance on selected areas of the ISE Privacy Guidelines. They were developed through extensive review and coordination by interagency working groups consisting of Federal privacy and civil liberties officials and attorneys and were reviewed and approved by the ISE Privacy Guidelines Committee and the Information Sharing Council.

Purpose
- The purpose of the guidance papers is to provide guidance in interpreting certain ISE Privacy Guidelines requirements and to outline possible methods or “best practices” to assist agencies in implementing those requirements. These guidance papers do not create new or modify existing policy.

Policy Guidance
- The policy guidance section identifies the core, or basic, elements that an agency must address in order to comply with key requirements of the ISE Privacy Guidelines that are the subject of a guidance paper. It also identifies optional suggested elements that contribute to the formulation of an exemplary privacy, civil rights, and civil liberties protection policy.

Background and Commentary
- The background and commentary section provides additional background information on the subject area, including its relationship to the Federal Information Processing Standards (FIPS), the background rationale for the ISE Privacy Guidelines provision, and a discussion of some of the key issues in that subject area. This section also cites resource documents and provides appropriate links.

Resources and Tools
- The resources and tools section provides helpful checklists, guidelines, documents, and best-practices information designed to assist agencies in formulating and implementing sound privacy, civil rights, and civil liberties policies.

Note on ISE Privacy and Civil Liberties Implementation Guidance

The ISE Privacy Guidelines contain references to requirements that agencies put in place—policies and procedures—as appropriate and consistent with their legal authorities and missions. Such references are not intended to imply that agencies are required to adopt policies and procedures that would impair the agencies’ abilities to exercise their statutory authorities and responsibilities, including the ability to claim exemptions under the Privacy Act of 1974 or to comply with the requirements of any other law, or that would negatively affect their position in
litigation or administrative proceedings. As noted in Section 13 (d)(iv) of the ISE Privacy Guidelines: “These Guidelines...are intended only to improve the management of the Federal Government and are not intended to, and do not, create any rights or benefits, substantive or procedural, enforceable at law or in equity by a party against the United States, its departments, agencies, or entities, its officers, employees, or agencies, or any other person.”
REDRESS

GUIDANCE

Requirement

The Information Sharing Environment (ISE) Privacy Guidelines, at Section 8, provide that:

To the extent consistent with its legal authorities and mission requirements, each agency shall, with respect to its participation in the development and use of the ISE, put in place internal procedures to address complaints from persons regarding protected information about them that is under the agency’s control.

Purpose

This document does not create new or modify existing policy but rather provides guidance interpreting the above ISE Privacy Guidelines requirement and outlines possible methods or “best practices” to assist agencies in implementing this requirement. This guidance will be supplemented as the ISE matures and other technological recommendations are implemented.

General

As the ISE is developed, individuals may experience circumstances that lead them to question whether protected information (PI) about them might be erroneous, improperly collected, or inappropriately shared or used as part of the ISE, and they may wish to have the situation corrected. Because individuals will not always know the source of the information, complaints most likely will be lodged with the Federal agency which the complainant believes is responsible, rather than with the agency which originated the information and made it available in the ISE. Accordingly, in implementing Section 8, Federal agencies should review their existing complaint-handling procedures to determine whether they accommodate issues pertaining to PI shared in the ISE. The objective is to ensure that internal and external processes exist for handling complaints involving information originating with another agency and for assisting other agencies in receipt of complaints involving information for which an agency is the source. As needed, agencies shall establish procedures appropriate for addressing complaints arising from the sharing of PI in the ISE but only to the extent such procedures do not conflict with legal authorities and mission requirements.

---

8 Section 1(b) of the ISE Privacy Guidelines defines protected information as “information about United States citizens and lawful permanent residents that is subject to information privacy or other legal protections under the Constitution and Federal laws of the United States. For the intelligence community, protected information includes information about ‘United States persons’ as defined in Executive Order 12333. Protected information may also include other information that the U.S. Government expressly determines by Executive Order, international agreement, or other similar instrument, should be covered by these Guidelines.”
Redress has been recognized as a useful mechanism to improving data integrity by ensuring data is current, complete, and accurate. However, as noted, this guidance is intended only to assist agencies in implementing the ISE Privacy Guidelines—it neither affects any existing agency policy or Privacy Act exemptions, nor is it intended to create any rights or benefits, substantive or procedural, enforceable at law or in equity by a party against the United States, its departments, agencies, entities, officers, employees, or agencies or any other person.

Agency ISE redress procedures should address the following core elements:

**Core Elements**

1. A description of the existing procedures for addressing complaints arising under the Constitution (including nonprivacy civil rights and civil liberties), Privacy Act, or other statutes (including civil rights and civil liberties statutes).

2. A description of policies, procedures, and personnel dedicated toward addressing complaints resulting from the agency’s use of PI originating from another agency (if any).

3. A description of policies, procedures, and personnel dedicated toward assisting other agencies to address matters involving PI an agency provided through the ISE (if any).

4. A description of procedures (as needed) developed and implemented for addressing complaints regarding PI in the ISE that are not otherwise covered by existing procedures (see 2 and 3 above).

**Additional Considerations**

1. Identify record-keeping practices and objectives (i.e., improving processes).

BACKGROUND AND COMMENTARY

Section 8 of the ISE Privacy Guidelines states the following with respect to redress:

**Redress.** To the extent consistent with its legal authorities and mission requirements, each agency shall, with respect to its participation in the development and use of the ISE, put in place internal procedures to address complaints from persons regarding protected information about them that is under the agency’s control.

The persons covered by these Guidelines are described in paragraph 1(b) as follows:

**Applicability.** These Guidelines apply to information about United States citizens and lawful permanent residents that is subject to information privacy or other legal protections under the Constitution and Federal laws of the United States (“protected information”). For the intelligence community, protected information includes information about “United States persons” as defined in Executive Order 12333. Protected information may also include other information that the U.S. Government expressly determines by Executive Order, international agreement, or other similar instrument, should be covered by these Guidelines.

The ISE Privacy Guidelines require each agency participating in the ISE, consistent with its legal authorities and mission requirements, to provide “redress”; i.e., a procedure for addressing complaints relating to PI in the ISE. The ISE Privacy Guidelines contemplate that agencies will afford redress with respect to issues involving information privacy, as well as alleged infringements of civil rights, civil liberties, and other legal rights protected by law. Therefore, as appropriate, agency procedures would permit persons to use the agency’s existing complaint/review procedures or any supplementary procedures developed for the ISE to address such complaints as alleged racial, ethnic, or religious profiling or retention in the ISE of information that has been expunged or determined to have been illegally collected.

Many participating ISE agencies already have in place procedures for handling all manner of complaints, including privacy, civil rights, and civil liberties unrelated to the ISE. The redress procedures contemplated by the ISE Privacy Guidelines are limited to situations involving complaints that the agency determines implicate PI in the ISE (although not necessarily under the control of the agency receiving the complaint). The ISE policy requirement to implement

---

9 The Background and Commentary section is provided as a resource concerning the general principles applicable to each ISE Privacy Guidelines requirement addressed. It is not a binding interpretation of law, regulation, or policy.

10 H.R. 1, Title VIII, Section 803, amends Section 1062 of the IRTPA to require that named Federal agencies “(3) ensure that such department, agency, or element has adequate procedures to receive, investigate, respond to, and redress complaints from individuals who allege such department, agency, or element has violated their privacy or civil liberties.”
internal complaint-handling procedures for ISE-related issues neither alters agency rules regarding record access or other rights nor requires agencies to either acknowledge the existence of records or inform complainants of case status or resolution where no such right currently exists. As is true under existing processes, many information privacy, Privacy Act, or civil rights and civil liberties complaints identified as involving PI in the ISE will not result in the complainant being informed of measures the agency takes to investigate a complaint, rectify an alleged error, or remedy an issue.

Because individuals and entities covered by these guidelines often may not recognize that there is any relationship between the complaint and the ISE, agencies must establish, as part of their procedure to address complaints, a process that will identify those complaints that are related to PI in the ISE. These complaints generally will be received through existing agency avenues of redress (e.g., Privacy Act requests, existing agency civil rights and civil liberties processes). Once an agency determines that a complaint, which may be received as a general complaint, concerns PI originating with the agency or obtained through the ISE, the principles of ISE redress require the agency to coordinate with all involved agencies to investigate and correct (or remove) any identified information deficiencies.

Agencies must review their existing complaint policies and procedures to ensure that processes exist to identify complaints involving PI in the ISE and to bring them to the attention of the agency’s ISE Privacy Official or designee. (See Data Quality issue paper addressing the ISE Privacy Official’s responsibility for data quality.) Thus, the ISE Privacy Guidelines’ focus is on providing a process by which complaints implicating PI in the ISE are identified and addressed.

The ISE Privacy Guidelines protect the information privacy and other legal rights of United States citizens and lawful permanent residents and, for the intelligence community, United States persons. However, these categories of PI may be expanded to include other information that the United States government expressly determines by Executive Order, international agreement, or other similar instrument shall be covered by the ISE Privacy Guidelines. Indeed, many agencies share PI pursuant to international agreements that allow foreign nationals access to review procedures (e.g., the agreement with the European Union [EU] involving Passenger Name Records). Where a complaint/review process is required by international agreement, special procedures may be employed for foreign nationals (to the extent that such details are not spelled out in the agreement).
The following is a list of authorities that may assist ISE participants in developing their redress policies and procedures for PI in the ISE:

**Executive Orders**

**Policy Guidance and Standards**

Federal Bureau of Investigation (FBI), Terrorist Screening Center, Redress Procedure.
http://www.fbi.gov/terrorinfo/counterrorism/redress.htm
RESOURCES AND TOOLS

In developing their ISE redress procedures, agencies may wish to use the following checklist and consider the following specific matters:

Core Elements

1. Describe existing redress and complaint procedures:
   a. Identify all agency-internal avenues for handling complaints (i.e., for all manner of complaints cognizable under statute or regulation or policy):
      i. Civil Rights/Civil Liberties
      ii. Privacy Act
      iii. EEO
      iv. OIG
      v. Ombudsman
      vi. Other
   b. Identify all interagency complaint initiatives that your agency supports:
      i. DHS Traveler Redress Inquiry Program (TRIP)
      ii. TSC Terrorist Watchlist Redress Process (MOU)
      iii. Other

2. Describe policies, procedures, and resources for identifying and addressing PI/ISE-related complaints resulting from the agency’s use of PI originating elsewhere.

3. Describe policies, procedures, and resources for assisting other ISE agencies to address complaints arising from their use of PI originating with your agency.

4. Establish procedures (as needed) for addressing privacy or civil liberties complaints relating to PI in the ISE and not otherwise subject to existing procedures:
   a. Provide identity and contact information for agency office of the ISE Privacy Official—e.g., a mailing address (USPS or e-mail) and/or a telephone number(s) of responsible staff.
   b. Ensure that all agency complaint-handling components are familiar with the ISE and understand when a complaint received implicates PI subject to ISE redress.
      • Establish process/information to assist non-ISE-complaints staff in identifying when a complaint involves PI in the ISE.
   c. Establish appropriate liaison with ISE participants from which data will likely originate to facilitate complaint investigation processes.
      • Provide a point of contact and responsible official to ensure appropriate reciprocal support to complaint recipients.
d. Explain processes for coordinating investigation of PI/ISE-related complaints both internally and externally.

e. Develop tools required under the Privacy Act for administering the PI/ISE complaint “program,” such as:
   (i) Establish or identify an appropriate system of records to maintain complaints and related information.
   (ii) Ensure that the system of records notice associated with the redress system contains a routine use to allow disclosure of complaint and personally identifiable information to other agencies and organizations to the extent necessary to investigate and address the complaint.
   (iii) Identify records retention obligations.

f. Develop procedures for responding to identified ISE-related complaints.
   (i) Leverage existing agency procedures for establishing/verifying identity or status where appropriate.
   (ii) Develop protocol for acknowledging complaint.
      (a) May wish to articulate scope of redress available:
         ➢ Investigation of alleged errors.
         ➢ Correction of alleged errors/removal of data.
         ➢ Notification of correction to originator and downstream recipients of record.
      (b) May wish to articulate limits of redress afforded:
         ➢ No remedy for underlying injury.
         ➢ No right of action.
         ➢ Particular forms of redress (e.g., right of access to records, notice of resolution of complaint, explanation of investigatory process) may be unavailable given national security, law enforcement equities, or other security considerations relating to terrorism.

### Additional Considerations

1. Identify record-keeping objectives intended to enhance ISE processes:
   a. Record PI/ISE complaints received and disposition.
   b. Maintain unresolved PI/ISE complaints.
   c. Examine policy/process changes (if any) needed for PI/ISE review process.

2. Develop outreach/public awareness materials regarding agency PI/ISE redress framework:
   a. Explain process for identifying ISE-related complaints.
   b. Explain processes for investigating and addressing complaints, internally and externally.
   c. Explain “redress” available; i.e., data quality activities.
NOTICE MECHANISMS

GUIDANCE

Requirement

The Information Sharing Environment (ISE) Privacy Guidelines, at Section 4(b), provide the following Notice Mechanisms requirement:

b. Notice Mechanisms. Consistent with guidance and standards to be issued for the ISE, each agency shall put in place a mechanism for enabling ISE participants to determine the nature of the protected information that the agency is making available to the ISE, so that such participants can handle the information in accordance with applicable legal requirements. Specifically, such a mechanism will, to the extent reasonably feasible and consistent with the agency’s legal authorities and mission requirements, allow for ISE participants to determine whether:

(i) The information pertains to a United States citizen or lawful permanent resident;
(ii) The information is subject to specific information privacy or other similar restrictions on access, use or disclosure, and if so, the nature of such restrictions; and
(iii) There are limitations on the reliability or accuracy of the information.

Purpose

This document does not create new or modify existing policy but rather provides guidance interpreting the above ISE Privacy Guidelines requirement and outlines possible methods or “best practices” to assist agencies in implementing this requirement. This guidance will be supplemented as the ISE matures and other technological recommendations are implemented.

General

Section 4(b) of the ISE Privacy Guidelines recognizes that enabling agencies to determine important characteristics of protected information (PI) available in the ISE—such as the status of an individual; any restrictions on access, use, or disclosure of PI; and any limitations on its reliability and accuracy—will promote a trusted information sharing environment as recipient agencies are made aware of these aspects of PI and can determine whether access to, use of, and further disclosure of the data are consistent with agency missions and applicable legal requirements. Providing restrictions and limitations on information as part of a record, data set,

---

11 Section 1(b) of the ISE Privacy Guidelines defines protected information as “information about United States citizens and lawful permanent residents that is subject to information privacy or other legal protections under the Constitution and Federal laws of the United States. For the intelligence community, protected information includes information about ‘United States persons’ as defined in Executive Order 12333. Protected information may also include other information that the U.S. Government expressly determines by Executive Order, international agreement, or other similar instrument, should be covered by these Guidelines.”
or record system will also serve to mitigate potential risks arising from information sharing activities for all agencies participating in the ISE.

This ISE Privacy Guidelines Notice Mechanisms Guidance comports with the proposed marking of Controlled Unclassified Information (CUI) recommended under the framework described in the proposed Presidential Guideline 3 report, Standardized Procedures for Sensitive But Unclassified (SBU) Information (issuance pending). While the proposed CUI framework under Guideline 3 contemplates a limited set of approved “markings” reflecting handling and dissemination requirements, the elements of notice set forth above from the ISE Privacy Guidelines relating to the status of an individual and reliability and accuracy of the information are intended to reflect the nature and quality of the information itself and to be incorporated within an individual record, data set, or record system. These notice mechanisms for privacy requirements are not a handling or dissemination requirement. This guidance should be read in conjunction with the proposed CUI framework and should not be read to foreclose the possibility that notice of “specific information privacy or other similar restrictions on access, use, or disclosure” may be addressed through a CUI marking in the future.

To incorporate appropriate notice, agencies creating reports or disseminating products containing PI in the ISE may continue their customary practices in providing information about their individual records, data sets, or record systems that assists in determining whether the information pertains to an individual’s status, any restrictions on access, use, or disclosure, and any limitation on reliability or accuracy of the information. Agencies may use, among other methods, a simple cover sheet to flag such issues or, for electronic information, may use banners, legends, or full-screen notices signaling the general character of and restrictions on access, use, or disclosure of records in the data set or record system.

As may be reasonable and consistent with agencies’ legal authorities and mission requirements, agencies engaging in the ISE should consider adopting mechanisms to provide notice of each of the following core elements of information:

**Core Elements**

1. Status of record subject(s):
   a. U.S. citizen
   b. Lawful permanent resident (LPR)
c. Noncitizen or non-LPR protected by treaty or international agreement
d. Undetermined

2. Restrictions on access, use, or disclosure:
   a. Nature of restriction
   b. Source of restriction

3. Reliability and accuracy of information:
   a. Nature of the source—indicating the origin of the information
   b. Confidence—source reliability and content validity
   c. Data quality—ine consistencies or other accuracy concerns based on:
      (i) Notice received from previous recipients of the data
      (ii) Disagreements about accuracy received from the record subject or
           other person negatively impacted by the record
      (iii) Evaluation of data in context with other existing records
           (See Data Quality Guidance)
      (iv) Results of compliance reviews or external audits

Additional Considerations

1. Basic source and point-of-contact information
   a. Originating department, component, or office
   b. Agency system from which information is disseminated
   c. Date of collection/date last used to make a determination about an
      individual, if applicable
   d. Title/contact for questions about the information or access request, if
      appropriate

2. Date of last data accuracy review conducted in accordance with agency policy and
   procedure (see Data Quality Guidance)
BACKGROUND AND COMMENTARY

Background and Purpose

In the ISE, the information that is accessed or disseminated (disclosed) comes from numerous sources and often includes (1) protected information (PI), (2) information to which information privacy or other legal protections have been extended, and (3) information for which the status is undetermined or is not privacy-protected. Consequently, ISE participants may be bound by various legal requirements that govern access, use, and disclosure. The quality of the information in the ISE will also vary in reliability and accuracy. Therefore, as information is disclosed in the ISE, the ISE Privacy Guidelines require agencies to implement mechanisms to indicate to recipients whether information disclosed pertains to a U.S. citizen or lawful permanent resident; whether there are legal requirements that protect information privacy or other legal rights of the subject or restrict access, use, or disclosure of the information; and whether the source or providing agency considers the information to be of limited reliability or accuracy.

The purpose of this document is not to examine the range of notice mechanisms technology or to list all of the specific restrictions that might apply with respect to access, use, and disclosure of information in the ISE. Instead, this document focuses on the information about PI that could be included in individual records, data sets, or record systems that may be shared in the ISE.

In the ISE, information regarding PI; any specific information privacy; or other similar restrictions on access, use, or disclosure, and limitations on the reliability or accuracy of the information may be incorporated in a record, data set, or record system before it flows from its originating source or other provider to its end user.

Nature of the Information—Identify Status of Individuals

The status of data subjects may determine the degree of protection, if any, that they will receive in the ISE. Therefore, notice regarding limitations on access, use, or dissemination will necessarily begin with a determination of whether the information applies to U.S. citizens, lawful permanent residents (LPRs), or non-U.S. citizens who are not LPRs but who may, nevertheless, receive protection in the ISE. Suggested categories include:

---

12The Background and Commentary section is provided as a resource concerning the general principles applicable to each ISE Privacy Guidelines requirement addressed. This section neither establishes policy under the ISE nor is binding on any department or agency participating in the ISE. It is not a binding interpretation of law, regulation, or policy.
1. U.S. citizen\textsuperscript{13}
2. Lawful permanent resident\textsuperscript{14}
3. Non-U.S. citizen or non-LPR protected by treaty or other international agreement\textsuperscript{15}
4. Undetermined

**Limitations on Access, Use, or Disclosure—Identify Restrictions on Access, Use, or Disclosure:**

Identify any legal restrictions on access, use, or disclosure of PI and the nature of the restrictions. There are numerous statutory and regulatory limitations that pertain to different types of information that may be shared in the ISE.\textsuperscript{16}

**Limitations on Reliability and Accuracy (Validity)—Identify Confidence Limitations:**

There are existing efforts in some law enforcement and intelligence agencies at the Federal, state, local, and tribal levels to provide law enforcement information in a way that conveys to the recipient the originating agency’s level of confidence in the information; i.e., its assessment of the information’s (source) reliability and (content) validity. The U.S. Department of Justice’s (DOJ) Global Justice Information Sharing Initiative’s *Privacy, Civil Rights, and Civil Liberties Policy Templates for Justice Information Systems*\textsuperscript{17} (hereinafter “Justice PCRCL Policy Templates”) recommends that the following assessment typology be incorporated into the body of the record as appropriate to the nature of the information and the level of protection required:

\textsuperscript{13} U.S. citizenship can be obtained in one of two ways: (1) by birth, either within the territory of the United States or to U.S. citizen parents, or (2) by naturalization. [http://www.uscis.gov/portal/site/uscis/menuitem.eb1d4c2a3e5b9ac89243c6a7543f6d1a/?vgnextoid=96719c7755cb9010VgnVCM10000045f3d6a1RCRD\&vgnextchannel=96719c7755cb9010VgnVCM10000045f3d6a1RCRD](http://www.uscis.gov/portal/site/uscis/menuitem.eb1d4c2a3e5b9ac89243c6a7543f6d1a/?vgnextoid=96719c7755cb9010VgnVCM10000045f3d6a1RCRD\&vgnextchannel=96719c7755cb9010VgnVCM10000045f3d6a1RCRD). See also [United States Immigration and Nationality Act, Title 8 of the U.S. Code (8 U.S.C.)](http://www.uscis.gov/portal/site/uscis/menuitem.5af9bb9591f35e66f614176543f6d1a/?vgnextoid=0775667706f7d010VgnVCM10000048f3d6a1RCRD\&vgnextchannel=4f719c7755cb9010VgnVCM10000045f3d6a1RCRD).

\textsuperscript{14} According to United States Citizenship and Immigration Services (USCIS), “[A] lawful permanent resident is a foreign national who has been granted the privilege of permanently living and working in the United States.” [http://www.uscis.gov/portal/site/uscis/menuitem.5af9bb9591f35e66f614176543f6d1a/?vgnextoid=0775667706f7d010VgnVCM10000048f3d6a1RCRD\&vgnextchannel=4f719c7755cb9010VgnVCM10000045f3d6a1RCRD](http://www.uscis.gov/portal/site/uscis/menuitem.5af9bb9591f35e66f614176543f6d1a/?vgnextoid=0775667706f7d010VgnVCM10000048f3d6a1RCRD\&vgnextchannel=4f719c7755cb9010VgnVCM10000045f3d6a1RCRD).

\textsuperscript{15} Individuals who are not U.S. citizens or lawful permanent residents may receive certain protections in the ISE under the terms of an international agreement (e.g., the agreement with the EU involving Passenger Name Records).

1. **Nature of the Source.** Nature of the source simply identifies the origin of the information.
   a. Anonymous tip
   b. Informant
   c. Interview or written statement (subject, victim, witness, etc.)
   d. Public records (space should be provided for identifying the government system from which the information was derived because that may bear on its reliability)
   e. Private sector (notice should be given if the information was collected from a data aggregator or broker)
   f. Other (please specify)

2. **Source Reliability.** Source reliability addresses the consistency of the content validity of information obtained from a particular source over time.
   a. Reliable—the reliability of the source is trusted or has been well tested in the past
   b. Usually Reliable—the source can usually be relied upon
   c. Unreliable—the reliability of the source has been sporadic in the past
   d. Unknown—the reliability of the source cannot be judged

3. **Content Validity.** Information content deals with the accuracy or truth of the information independent of its source (i.e., even generally unreliable sources can sometimes provide reliable information).
   a. Confirmed—information has been corroborated by an investigator or another reliable source
   b. Probable—the information is consistent with past accounts
   c. Doubtful—the information is inconsistent with past accounts
   d. Cannot be judged—the information cannot be judged

This type of assessment allows investigators to determine the extent to which they may rely on the information and the extent to which verification from other sources will be required.

The ISE Data Quality Guidance provided at Divider VI, Tab C, of the Privacy and Civil Liberties Implementation Manual (PM-ISE 2007) suggests additional considerations regarding notice of information accuracy, relevancy, timeliness, and completeness; e.g., based on specific challenges to accuracy of the data received from recipient entities or record subjects or unresolved concerns arising from internal review.
Identify Basic Information

To the extent feasible and consistent with agency legal authorities and mission requirements, agencies should consider developing or expanding individual records, data sets, or record systems to include information about the provider of the data. The following elements of information would facilitate follow-up or inquiry:

1. The name of the originating department, component, or subcomponent.
2. The name of the agency system from which the information is disseminated.
3. The date the information was collected and the date it was last used to make a determination about an individual.
4. The title and contact information for the person to whom questions regarding the information should be directed.

The following is a list of authorities that may assist ISE participants in developing their notice mechanisms policies and procedures for PI in the ISE:

Policy Guidance and Directives

http://www.uscis.gov/portal/site/uscis/menuitem.5af9bb95919f35e66f614176543f6d1a/?vgnextoid=8b76194d3e88d010VgnVCM10000048f3d6a1RCRD&vgnextchannel=4f719c7755cb9010VgnVCM10000045f3d6a1RCRD (defining requirements for becoming a lawful permanent resident).
DATA QUALITY

GUIDANCE

Requirement

The Information Sharing Environment (ISE) Privacy Guidelines, at Section 5, provide the following Data Quality requirement:

a. **Accuracy.** Each agency shall adopt and implement procedures, as appropriate, to facilitate the prevention, identification, and correction of any errors in protected information with the objective of ensuring that such information is accurate and has not erroneously been shared through the ISE.

b. **Notice of Errors.** Each agency, consistent with its legal authorities and mission requirements, shall ensure that when it determines that protected information originating from another agency may be erroneous, includes incorrectly merged information, or lacks adequate context such that the rights of the individual may be affected, the potential error or deficiency will be communicated in writing to the other agency’s ISE privacy official (the ISE privacy officials are described in Section 12 below).

c. **Procedures.** Each agency, consistent with its legal authorities and mission requirements, shall adopt and implement policies and procedures with respect to the ISE requiring the agency to:

   (i) Take appropriate steps, when merging protected information about an individual from two or more sources, to ensure that the information is about the same individual;

   (ii) Investigate in a timely manner alleged errors and deficiencies and correct, delete, or refrain from using protected information found to be erroneous or deficient; and

   (iii) Retain protected information only so long as it is relevant and timely for appropriate use by the agency, and update, delete, or refrain from using protected information that is outdated or otherwise irrelevant for such use.

Purpose

This document does not create new or modify existing policy but rather provides guidance interpreting the above ISE Privacy Guidelines requirement and outlines possible methods or “best practices” to assist agencies in implementing this requirement. This guidance will be supplemented as the ISE matures and other technological recommendations are implemented.
General

Section 5 of the ISE Privacy Guidelines requires each agency participating in the ISE to adopt and implement procedures, as appropriate, regarding quality assurance measures to facilitate the prevention, identification, and correction of any errors in protected information (PI) in order to ensure the information is accurate and has not erroneously been shared through the ISE. The full value of the ISE may be realized only if PI shared in the ISE is accurate, relevant, timely, and complete to the extent the providing and receiving agencies’ missions require and any information identified as erroneous or deficient is corrected, updated, deleted, or not used, as administratively and technically feasible.

Consistent with legal authorities and mission requirements, agency policies and procedures should address the following core data quality elements for information shared through the ISE:

Core Elements

1. PI originating in the agency is as accurate, complete, and internally consistent as the agency requires for use in making determinations, given its authorities and mission.

2. PI is relevant and timely as appropriate for agency use, and when it becomes outdated or irrelevant for such agency use, it is updated, deleted, or not used in the ISE.

3. PI originating in the agency indicates to recipients any known limitations on its reliability or accuracy (see also Notice Mechanisms Guidance).

---

18 Section 1(b) of the ISE Privacy Guidelines defines protected information as “information about United States citizens and lawful permanent residents that is subject to information privacy or other legal protections under the Constitution and Federal laws of the United States. For the intelligence community, protected information includes information about ‘United States persons’ as defined in Executive Order 12333. Protected information may also include other information that the U.S. Government expressly determines by Executive Order, international agreement, or other similar instrument, should be covered by these Guidelines.”

19 Erroneous or deficient information does not include information for which the reliability or validity may not be fully established. These elements of confidence in the information are the subject of Notice Mechanisms Guidance implementing Section 4(b) of the ISE Privacy Guidelines.
4. Where feasible, written notice\(^20\) is given to the providing agency’s ISE Privacy Official of specific PI that the receiving agency has determined is erroneous, includes incorrectly merged information, or lacks adequate context such that the rights of the subject may be affected.

5. Alleged or identified errors or deficiencies in PI about which the agency is notified are investigated in a timely manner.

6. PI an agency investigation determines is erroneous or deficient for its purposes is corrected or deleted, or if not corrected or deleted, the agency refrains from sharing it through the ISE.

7. PI recipients, to the extent they can be identified, are notified of alleged or identified errors or deficiencies in the providing agency’s information that has been disseminated in the ISE, including incorrect mergers/matches/insertions of information.

8. Information the agency has matched against or consolidated from multiple sources relates to the same individual.

**Additional Considerations**

1. The agency maintains a record/accounting of data corrections/ additions provided and/or received.

2. The agency, in addition to providing written notice to the providing agency under Core Element 4 above, provides written notice to the originating (acquiring) agency where such agency is known and is not the providing agency.

\(^{20}\) Written notice could include any form of nonverbal communication (such as e-mail or formal letter) that is capable of being retained as an official agency record. It is in the agency’s discretion to determine who will be authorized to provide written notice to the providing agency and in what form.
BACKGROUND AND COMMENTARY

The core principles for protecting privacy and civil liberties in the ISE require Federal agencies, consistent with agency legal authorities and mission requirements, to “[e]stablish data quality, accuracy, and retention procedures” that reflect basic privacy protections and best practices. The principles established in Section 5, Data Quality, of the ISE Privacy Guidelines, incorporate and build upon the data quality requirements of the Privacy Act of 1974.

The ISE Privacy Guidelines contemplate that Federal agencies will comply with both the Guidelines and all applicable Privacy Act requirements for all information in the ISE. This will require agencies to review their existing data quality policies and procedures and, where necessary, develop new policies and procedures applicable to ISE information that meet each of the requirements for accuracy, notice, information merger protection, investigation of alleged errors and deficiencies, and retention of information that are set forth in Section 5.

Section 8 of the ISE Privacy Guidelines, Redress, requires a procedure for identifying complaints involving PI in the ISE and for bringing them to the attention of the ISE Privacy Official or designee. This individual should be enabled, through the agency’s Section 5 policies and procedures, to provide the redress contemplated under Section 8 and the Redress Policy Guidance, thereby furthering the agency’s interest in limiting dissemination and maintenance of information in the ISE to information that is accurate, timely, relevant, and complete.

In the Federal government, there are two primary statutes that impose data quality requirements on Federal agencies: (1) the Privacy Act of 1974, P.L. 93-579, as amended, and (2) the Information Quality Act, Section 515 of the Treasury and General Government Appropriations Act for Fiscal Year 2001, P.L. 106-554 (codified at 44 U.S.C. §§ 3504(d)(1) and 3516)).

21 The Background and Commentary section is provided as a resource concerning the general principles applicable to each ISE Privacy Guidelines requirement addressed. It is not a binding interpretation of law, regulation, or policy.

22 The Information Quality Act (IQA) requires Federal agencies subject to the Paperwork Reduction Act (44 U.S.C. § 3502(1)) to issue guidelines ensuring and maximizing the quality, objectivity, utility, and integrity of information including statistical information disseminated by the agency. The OMB Guidelines implementing the IQA (67 Federal Register 8452, February 22, 2002) define the term dissemination to mean “agency initiated or sponsored distribution of information to the public.” Public dissemination includes posting information on government Web sites and in government manuals that are distributed to the public. However, per the OMB Guidelines, “Dissemination does not include distribution limited to government employees.” Consequently, the IQA does not apply to records containing information about individuals that Federal agencies may share only internally or between agencies.
Data Quality Related Provisions of the Privacy Act of 1974

The Privacy Act can generally be characterized as an omnibus “code of fair information practices” for the collection, maintenance, use, and dissemination of information about individuals by Federal agencies. The Privacy Act’s protections apply to “individuals,” which the act defines as U.S. citizens and lawful permanent residents (LPRs).

The majority of the Privacy Act’s provisions are limited to “records” (in paper or electronic form) that are in a “system of records” maintained by a Federal agency. In order to qualify as a “record” under the Privacy Act, the item, collection, or grouping of information must contain an identifying particular assigned to the individual (name, social security number, employee number, finger- or voiceprint, photograph, etc.) and be “about” the individual (i.e., include some descriptive item of information about the individual, such as the individual’s education, medical history, employment history, home address, or even any information provided by the system name alone; e.g., “Quarantined Persons”). Furthermore, the “record” must be maintained in a “system of records,” which the Act defines as “a group of any records under the control of any agency from which information is retrieved by the name of the individual or by some identifying number, symbol, or other identifying particular assigned to the individual.”

Federal agencies that maintain systems of records must comply with the Privacy Act’s data quality requirements. For example, unless a system of records is exempt (see below), Subsection (e)(5) of the Privacy Act requires that an agency “maintain all records which are used by the agency in making any determination about any individual with such accuracy, relevance, timeliness, and completeness as is reasonably necessary to assure fairness to the individual in the determination.” Accuracy, timeliness, relevance, and completeness are all elements of data quality. In addition, Subsection (e)(1) requires that an agency “maintain in its records only such information about an individual as is relevant and necessary to accomplish a purpose of the agency required to be accomplished by statute or by Executive Order of the President.”

Subsection (d) of the Privacy Act requires agencies to allow individuals to access information pertaining to them that is maintained in a system of records and to request that the agency amend a record if the individual believes the information is not accurate, relevant, timely, or complete. If the agency refuses to amend the record in accordance with the request, administrative and

---

23 In 1972, a U.S. Department of Health, Education, and Welfare advisory committee proposed a “Code of Fair Information Practices.” These practices formed the basis for the Privacy Act of 1974, and these “Fair Information Practices” are embodied as principles in the Privacy Act, as well as in a number of subsequent codes related to information collection, security, and privacy.

24 In some circumstances, agencies may also provide certain Privacy Act protections to non-U.S. citizens and LPRs under the terms of an international agreement or as a matter of policy (see, for example, the agreement with the EU involving Passenger Name Records and DHS Privacy Policy Guidance Memorandum Number 2007-1 DHS Privacy Policy Regarding Collection, Use, Retention, and Dissemination of Information on Non-U.S. Persons, January 19, 2007).

26 5 U.S.C. § 552a(a)(5)

27 5 U.S.C. § 552a(e)(5).

judicial remedies are provided. Subsections (j) and (k), however, allow agencies to exempt certain records from specified provisions of the act, including Subsections (d), (e)(1), and (e)(5).

In enacting the Privacy Act, Congress recognized that the application of all of the act’s requirements to certain categories of records could have undesirable and often unacceptable effects upon certain agencies in the conduct of necessary public business, particularly law enforcement and national security agencies. Consequently, Congress specifically authorized agencies to exempt particular systems of records from certain provisions of the Privacy Act. Nonetheless, no system of records is automatically exempt from any provision of the act. The agency that maintains a system must determine whether the system may be exempted and then promulgate a rule subject to the requirements of general notice and public comment as required by the Administrative Procedure Act, 5 U.S.C. § 551, 553 (1994). The rule must include the specific provisions from which the system is proposed to be exempted and specific reasons why the agency considers the exemption necessary.

29From OMB Privacy Act Implementation, Guidelines and Responsibilities [hereinafter OMB Privacy Act Guidelines], 40 Federal Register 28,948, 28,972 (July 9,1975), concerning provisions to exempt certain law enforcement records:

This provision allows agency heads to exempt a system of records compiled in the course of an investigation of an alleged or suspected violation of civil laws, including violations of the Uniform Code of Military Justice and associated regulations, except to the extent that the system is more broadly exempt under the provision covering records maintained by an agency whose principal function pertains to the enforcement of criminal laws (subsection (j)(2)) . This exemption was drafted because ‘[i]ndividual access to certain law enforcement files could impair investigations, particularly those which involve complex and continuing patterns of behavior. It would alert subjects of investigations that their activities are being scrutinized, and thus allow them time to take measures to prevent detection of illegal action or escape prosecution.’ (House Report 93-1416, p. 19)

30From OMB Privacy Act Guidelines, 40 Federal Register at 28,972, concerning provisions to exempt certain national security records:

Useful guidance in the application of this provision is found in the Senate Committee report discussion of a similar provision on classified materials. ‘The potential for serious damage to the national defense or foreign policy could arise if the notice describing any information system included categories or sources of information … or provided individuals access to files maintained about them…. The Committee does not by [the passage of the Privacy Act] intend to jeopardize the collection of intelligence information related to national defense or foreign policy, or open to inspection [classified information] to persons who do not have an appropriate security clearance or need to know.’ (Senate Report 93-1183, p. 74)
The exemption provisions are permissive; that is, an agency is authorized, but not required, to exempt a system from all or any portion of selected provisions of the Privacy Act when an agency deems it to be in the best interest of the government and consistent with the act and the OMB Privacy Act Guidelines.\textsuperscript{31}

Subsection (e)(6) of the Privacy Act requires that “prior to disseminating any record about an individual to any person other than an agency, unless the dissemination is made pursuant to Subsection (b)(2) [the Freedom of Information Act (FOIA)] of this section, [the agency must] make reasonable efforts to assure that such records are accurate, complete, timely, and relevant for agency purposes.”\textsuperscript{32} While this requirement does not apply when information is being shared between Federal agencies, it is not a provision from which an agency can claim exemption. Consequently, an agency that has exempted records from Subsections (d) (access and amendment) and (e)(5) (accuracy, relevance, timeliness) of the act must nevertheless make reasonable efforts to ensure the accuracy, completeness, timeliness, and relevance of the records when it disseminates them outside the agency to authorized recipients, other than other Federal agencies and FOIA requesters.

An individual may bring a civil action against an agency under Subsection (g)(1)(C) of the Privacy Act if the agency “fails to maintain any record concerning [the] individual with such accuracy, relevance, timeliness, and completeness as is necessary to assure fairness in any determination relating to the qualifications, character, rights, or opportunities of, or benefits to the individual that may be made on the basis of such record, and consequently a determination is made which is adverse to the individual.”\textsuperscript{33}

For guidance in interpreting and applying the Privacy Act’s provisions, agencies should consult the Office of Management and Budget’s (OMB) Privacy Act guidance and the case law interpreting the act.

In addition to review under the Privacy Act, OMB Memorandum M-07-16, \textit{Safeguarding Against and Responding to the Breach of Personally Identifiable Information}, requires all Federal agencies to inventory their holdings of personally identifiable information and to undertake the following data quality review:

\begin{itemize}
  \item The OMB Privacy Act Guidelines, \textit{40 Federal Register} at 28,971, reflect the need for the exercise of agency discretion. In commenting on this provision, the House Committee noted:
    \begin{quote}
      The Committee also wishes to stress that this section is not intended to require the CIA and criminal justice agencies to withhold all their personal records from the individuals to whom they pertain. We urge those agencies to keep open whatever files are presently open and to make available in the future whatever files can be made available without clearly infringing on the ability of the agencies to fulfill their missions. (House Report 93-1416, p. 19)
    \end{quote}

33 U.S.C. § 552a(g)(1)(C).
\end{itemize}
Review Current Holdings. Agencies must now also review their current holdings of all personally identifiable information and ensure, to the maximum extent practicable, such holdings are accurate, relevant, timely, and complete, and reduce them to the minimum necessary for the proper performance of a documented agency function.

Following this initial review, agencies must develop and make public a schedule by which they will periodically update the review of their holdings. This schedule may be part of an agency’s annual review and any consolidated publication of minor changes of Privacy Act systems of records notices.

The following is a list of authorities that may assist ISE participants in developing their data quality policies and procedures for PI in the ISE:

RESOURCES AND TOOLS

In crafting any needed ISE data quality policies and procedures for protected information (PI) in the ISE, agencies may wish to adopt some of the following suggested approaches and considerations:

1. Consider whether data quality reviews conducted pursuant to other requirements are current and appropriate in the ISE context, such as:
   a. Computer Matching Agreement
   b. Privacy Impact Assessment
   c. Memorandum of Understanding
   d. OMB Memorandum M-07-16 (May 22, 2007)

2. Articulate a process to identify priority areas for data quality review, such as:
   a. PI residing in systems of records subject to the data quality requirements of the Privacy Act (i.e., records that are not exempt from the Privacy Act’s data quality requirements).
   b. PI residing in information systems subject to the data quality requirements contained in international agreements.
   c. Circumstances in which an erroneous record could result in an erroneous decision (versus circumstances permitting a range of accuracy).
   d. Circumstances in which subjective findings are critical and assessment of the author’s expertise bears on a determination regarding data quality.

3. Articulate a process to evaluate PI in context with other existing records to detect inconsistencies or other concerns about accuracy.

4. Articulate a process for evaluating the integrity of data matching and merging activities vis-à-vis the identity of the record subject.

5. Articulate a process for correcting, supplementing, or annotating erroneous or deficient PI reported to the agency ISE Privacy Official (regardless of any exemption from data quality standards that may apply).

6. Articulate a process to prevent the use or dissemination of erroneous or deficient PI.

7. Articulate a process to notify a providing or receiving agency’s ISE Privacy Official of errors, changes, clarifying or contrary information, or information alerting the recipient agency to possible limitations on the accuracy of the data, such as:
a. Including contrary or qualifying information in order to clarify the information in the record.
b. Clearly identifying opinions as such.
c. Identifying and advising recipients regarding records that are of questionable accuracy or have known limits on their accuracy (see also Notice Mechanisms Guidance).
d. Including in the record a concise statement of any disagreement submitted by a record subject, when appropriate.
e. Providing the last date on which the record was reviewed for accuracy.

8. Articulate a process to ensure timeliness of records maintained and shared, such as:
   a. Refraining from disseminating information known to be outdated.
   b. Revisiting data retention schedules to determine whether shorter retention periods will reduce the number of outdated or irrelevant records.
   c. Developing procedures for handling criminal history record information that has been sealed or expunged by court order.

9. Articulate a process to create an accounting of data quality reviews, identifying the reviewer and dates of correction/notice to providing or recipient agency ISE Privacy Officials.

37 Illinois IJIS Privacy Policy Subcommittee, supra, at p. 3.
DATA SECURITY

GUIDANCE

Requirement

The Information Sharing Environment (ISE) Privacy Guidelines, at Section 6, provide the following Data Security requirement:

Each agency shall use appropriate physical, technical, and administrative measures to safeguard protected information shared through the ISE from unauthorized access, disclosure, modification, use, or destruction.

Purpose

This document does not create new or modify existing policy but rather provides guidance interpreting the above ISE Privacy Guidelines requirement and outlines possible methods or “best practices” to assist agencies in implementing this requirement. This guidance will be supplemented as the ISE matures and other technological recommendations are implemented.

General

To ensure the viability of the ISE and its use for the purposes intended, protected information and associated information technology systems must be safeguarded from unauthorized access, disclosure, modification, use, or destruction.

The governing legal and regulatory security framework prescribes the process for determining the information security categories and associated information security controls applicable in specific operating environments. This legal and regulatory framework establishes the core elements for agency information assurance policies.

This guidance identifies the security standards that apply to Federal civilian, military, and intelligence information systems.

---

38Section 1(b) of the ISE Privacy Guidelines defines protected information as “information about United States citizens and lawful permanent residents that is subject to information privacy or other legal protections under the Constitution and Federal laws of the United States. For the intelligence community, protected information includes information about ‘United States persons’ as defined in Executive Order 12333. Protected information may also include other information that the U.S. Government expressly determines by Executive Order, international agreement, or other similar instrument, should be covered by these Guidelines.”
Core Elements

1. Non-National Security Systems
   a. Security categorization standards (low-, moderate-, high-impact)
      • *Standards for the Security Categorization of Federal Information and Information Systems* (NIST/FIPS 199)
   b. Minimum security requirements (keyed to system impact category)
      • *Minimum Security Requirements for Federal Information and Information Systems* (NIST/FIPS 200)
   c. Implementation of controls (keyed to minimum security requirements)
      • *Recommended Security Controls for Federal Information Systems* (NIST/SP 800-53)

2. National Security Systems
   a. Defense Information Assurance Certification/Accreditation Process (DIACAP)
   b. National Information Assurance Certification/Accreditation Process (NIACAP)
   c. Director of Central Intelligence Directive (CID) 6/3 (*Protecting Sensitive Compartmented Information Within Information Systems*)
   d. National Information Assurance Policy No. 11 (NSTISSP No. 11)
BACKGROUND AND COMMENTARY

Introduction:

Section 6 of the ISE Privacy Guidelines provides the following Data Security requirement:

Each agency shall use appropriate physical, technical, and administrative measures as required by law and policy to safeguard protected information in the ISE from unauthorized access, disclosure, modification, use, or destruction.

All Federal government systems involved in the ISE operate within environments that impose specific physical, technical, and administrative requirements that will be applicable to protected information (PI) shared in the ISE. Therefore, the purpose of this document is to identify the applicable computer-security requirements and suggest that participants in the ISE renew their focus and attention to this critical issue in order to safeguard PI in the ISE from unauthorized access, disclosure, modification, use, or destruction.

Federal Information and Information System Security Requirements

The Federal Information Security Management Act (FISMA) of 2002 (Title III of the E-Government Act of 2002) requires that all Federal agencies develop and implement agency-wide information security programs. Different types of systems, however, are governed by different security regimes. FISMA requires that all agencies protect Federal information and information systems in any format (electronic, paper, etc.) and follow the standards and guidelines developed by the National Institute of Standards and Technology (NIST). FISMA, 39

39 The Background and Commentary section is provided as a resource concerning the general principles applicable to each ISE Privacy Guidelines requirement addressed. It is not a binding interpretation of law, regulation, or policy.

40 Under certain circumstances, other Federal statutes may impose general security requirements on Federal agencies. These regulations and any new controls they create do not preclude agency responsibilities to implement FISMA. For example, the Privacy Act of 1974 requires that agencies that maintain information in a system of records must:

Establish appropriate administrative, technical, and physical safeguards to insure [sic] the security and confidentiality of records and to protect against any anticipated threats or hazards to their security or integrity which could result in substantial harm, embarrassment, inconvenience, or unfairness to any individual on whom information is maintained. 5 U.S.C. § 552a(e)(10)

41 “NIST is a non-regulatory Federal agency in the U.S. Commerce Department's Technology Administration. NIST's mission is to promote U.S. innovation and industrial competitiveness by advancing measurement science,
however, exempts national security systems, as defined in 44 U.S.C. § 3542(b)(2), from NIST requirements. Per National Security Directive No. 42, national security systems are governed by security policies issued by the Committee on National Security Systems and the Director of the National Security Agency. Therefore, this paper will address applicable security requirements for (1) non-national security systems and (2) national security systems.

### 1. Non-National Security Systems

FISMA required NIST to develop Federal security categorization standards for Federal information and information systems according to impact levels. Therefore, in February of 2004, NIST issued Federal Information Processing Standards (FIPS) 199, Standards for the Security Categorization of Federal Information and Information Systems. FIPS 199 requires that agencies categorize their information systems as low-impact, moderate-impact, or high-impact as a starting point for ensuring the confidentiality, integrity, and availability of information in the system.

After agencies categorize their system security needs using FIPS 199, they are required to follow the mandatory security requirements contained in FIPS Publication 200, Minimum Security Requirements for Federal Information and Information Systems. FIPS 200 provides minimum security requirements for Federal information and information systems and establishes a risk-based process for determining the security controls necessary to ensure compliance with those requirements.

### 2. National Security Systems

As mentioned previously, FISMA specifically exempts national security systems from NIST requirements. FISMA defines the term national security system at 44 U.S.C. § 3542(b)(2). NIST Special Publication 800-59, Guideline for Identifying an Information System as a National Security System (August 2003), assists agencies in identifying when they are operating a national security system.

 standards, and technology in ways that enhance economic security and improve our quality of life.”

42“Nothing in this Act (including any amendment made by this Act) shall supersede any authority of the Secretary of Defense, the Director of Central Intelligence, or other agency head, as authorized by law and as directed by the President, with regard to the operation, control, or management of national security systems, as defined by Section 3542(b)(2) of Title 44, United States Code.” See 44 U.S.C. § 3549(c)(1).
Agencies that deploy national security systems generally follow one of two different security methodologies: DoD Information Assurance Certification and Accreditation Process (DIACAP) or National Information Assurance Certification and Accreditation Process (NIACAP). With respect to certain types of intelligence information, agencies are also required to meet the security requirements contained in Director of Central Intelligence Directive (DCID) 6/3, Protecting Sensitive Compartmented Information Within Information Systems.\(^{43}\)

a. **DIACAP**

DIACAP\(^{44}\) is the U.S. Department of Defense (DoD) information assurance (IA) certification and accreditation (C&A) process. DIACAP applies to both classified and unclassified\(^{45}\) DoD information systems.\(^{46}\) DIACAP is generally used only by defense agencies,\(^{47}\) but civilian agencies sometimes apply DIACAP principles to their own C&A processes when not inconsistent with NIST guidance.

b. **NIACAP**

NIACAP is based on the National Security Telecommunications and Information System Security Instruction known as NSTISSI No. 1000.\(^{48}\) NIACAP establishes the minimum national standards for certifying and accrediting certain national security systems. It is used in some form by the U.S. Department of State (http://www.state.gov/m/irm/rls/irm/21907.htm), the U.S. Department of the Treasury, the U.S. Department of Energy, the U.S. Department of Justice, and others as the methodology for protecting their national security systems. NIACAP is not used by DoD or members of the Intelligence Community who process Sensitive Compartmentalized Information (SCI).

---

\(^{44}\)DITSCAP was DIACAP’s predecessor methodology. DIACAP superseded DITSCAP.

\(^{45}\)FISMA specifically exempts DoD unclassified systems from the NIST guidance requirements that generally apply to unclassified systems. See 44 U.S.C. § 3543(c)(1).

\(^{46}\)DoD Instruction Number 5200.40, at 2, § 2.3 (“Shall apply to the acquisition, operation and sustainment of any DoD system that collects, stores, transmits, or processes unclassified or classified information. It applies to any IT or information system life cycle, including the development of new IT systems, the incorporation of IT systems into an infrastructure, the incorporation of IT systems outside the infrastructure, the development of prototype IT systems, the reconfiguration or upgrade of existing systems, and legacy systems.”)

\(^{47}\)DITSCAP “[a]pplies to the Office of the Secretary of Defense (OSD), the Military Departments, the Chairman of the Joint Chiefs of Staff, the Combatant Commands, the Inspector General of the Department of Defense (IG, DoD), the Defense Agencies, and the DoD Field Activities (hereafter referred to collectively as “the DoD Components”), their contractors, and agents.” DoD Instruction Number 5200.40, Information Technology Security Certification and Accreditation Process (DITSCAP), at 2, December 1997.

\(^{48}\)This document can be found at [http://www.cnss.gov/Assets/pdf/nstissi_1000.pdf](http://www.cnss.gov/Assets/pdf/nstissi_1000.pdf).
c. **Central Intelligence Directive 6/3**

The Director of Central Intelligence issued Central Intelligence Directive (DCID) 6/3, *Protecting Sensitive Compartmented Information Within Information Systems*[^49] to establish uniform security guidance and requirements for ensuring adequate protection of Sensitive Compartmentalized Information (SCI) and information used in Special Access Programs (SAPs). SCI refers to a method by which certain types of classified information must be handled. It applies primarily to information regarding national security issues or programs that have not yet been publicly acknowledged. SAPs are programs that require extraordinary security requirements.[^50]

[^50]: Army Regulation 380–381, *Special Access Programs*, at [http://www.fas.org/irp/doddir/army/ar380-381-old.pdf](http://www.fas.org/irp/doddir/army/ar380-381-old.pdf), provides the following examples of SAPs: (1) a specific technology with potential for weaponization that gives the United States a significant technical lead or tactical advantage over potential adversaries; (2) sensitive technology that is especially vulnerable to foreign intelligence exploitation without special protection; (3) an emerging technology, proposed operation, or intelligence activity risking the compromise of other SAPs; (4) exposure of sensitive activities that could jeopardize the lives of U.S. citizens; (5) a capability that is so unique or sensitive that it requires protection beyond normal procedures; (6) an extremely sensitive activity requiring special protection from disclosure to prevent significant damage to national security or the reputation or interests of the United States; (7) methods used to acquire foreign technology or equipment; and (8) sensitive support to DOD and non-DOD agencies.
The following is a list of authorities that may assist ISE participants in developing their data security policies and procedures for PI in the ISE:

**Statutes**

Privacy Act of 1974, 5 U.S.C. § 552a(e)(10) (requiring that system of records owners establish appropriate administrative, technical, and physical safeguards to ensure the security and confidentiality of records).

National Information Assurance Acquisition Policy (NSTISSP No. 11).

RESOURCES AND TOOLS

The following information may assist agencies in reviewing their policy issuances and compliance directives regarding the data security requirements appropriate to their operating environments:

Definition of National Security System (NSS):

   a. Definition—In this subtitle, the term national security system means any telecommunications or information system operated by the United States government,
      (i) The function, operation, or use of which—
         (a) Involves intelligence activities;
         (b) Involves cryptologic activities related to national security;
         (c) Involves command and control of military forces;
         (d) Involves equipment that is an integral part of a weapon or weapons system; or
         (e) Subject to Subsection (b), is critical to the direct fulfillment of military or intelligence missions.
      (ii) Is protected at all times by procedures established for information that have been specifically authorized under criteria established by an Executive Order or an Act of Congress to be kept classified in the interest of national defense or foreign policy.
   b. Limitation—Subsection (b)(2)(i)(e) does not include a system that is to be used for routine administrative and business applications (including payroll, finance, logistics, and personnel management applications).

2. DIACAP
   a. Applies to unclassified, as well as to classified DoD information systems.
   b. Civilian agencies often apply DIACAP principles to certification and accreditation processes when not inconsistent with NIST guidance.

3. NIACAP
   a. Agencies following NIACAP to certify and accredit NSSs include but are not limited to:
      i. U.S. Department of State (blended with NIST guidance)
      ii. U.S. Department of the Treasury
      iii. U.S. Department of Energy
      iv. U.S. Department of Justice
b. NIACAP is not appropriate for application to systems administering Sensitive Compartmentalized Information (SCI), such as those residing within DoD or at the various Intelligence Community agencies.

4. DCID 6/3
   • Applicable to information systems administering Sensitive Compartmentalized Information (SCI) and information used in Special Access Programs (SAPS).

5. NSTISSP-11
   • Applicable to the acquisition of information technology products for all systems entering, processing, storing, displaying, or transmitting national security information.
ACCOUNTABILITY, ENFORCEMENT, AND AUDIT

GUIDANCE

Requirement

The Information Sharing Environment (ISE) Privacy Guidelines, at Section 7, provide the following Accountability, Enforcement, and Audit requirements:

a. Procedures. Each agency shall modify existing policies and procedures or adopt new ones, as appropriate, requiring the agency to:

(i) Have and enforce policies for reporting, investigating, and responding to violations of agency policies relating to protected information, including taking appropriate action when violations are found;

(ii) Provide training to personnel authorized to share protected information through the ISE regarding the agency’s requirements and policies for collection, use, and disclosure of protected information and, as appropriate, for reporting violations of agency privacy-protection policies;

(iii) Cooperate with audits and reviews by officials with responsibility for providing oversight with respect to the ISE; and

(iv) Designate each agency’s ISE privacy official to receive reports (or copies thereof if the agency already has a designated recipient of such reports) regarding alleged errors in protected information that originate from that agency.

b. Audit. Each agency shall implement adequate review and audit mechanisms to enable the agency’s ISE privacy official and other authorized officials to verify that the agency and its personnel are complying with these Guidelines in the development and use of the ISE.

Purpose

This document does not create new or modify existing policy but rather provides guidance interpreting the above ISE Privacy Guidelines requirement and outlines possible methods or “best practices” to assist agencies in implementing this requirement. This guidance will be supplemented as the ISE matures and other technological recommendations are implemented.
General

The policies, procedures, and mechanisms governing the ISE are designed to protect the privacy and other legal rights of Americans and to ensure the timely availability and utility of protected information. To ensure these ends are achieved, agencies are encouraged to integrate enhanced accountability, enforcement, and audit policies and practices for protected information (PI)\textsuperscript{51} in the ISE with existing agency compliance verification mechanisms. Where necessary, agencies should develop compliance verification mechanisms specific to their ISE activities. In either case, to ensure an adequate compliance policy/program, agencies should consider incorporating the following core elements:

Core Elements

1. Policy framework that addresses:
   a. Training of personnel authorized to handle PI in the ISE.
   b. Reporting of violations of agency privacy protection policies.
   c. Investigating identified/reported violations of agency privacy protection policies.
   d. Responding to identified/reported violations of agency privacy protection policies.
   e. Cooperating with audits and reviews by appropriate internal and external audit and oversight authorities.
   f. Measures ensuring that the agency ISE privacy official receives copies of all reports/notices regarding alleged errors in PI content that the agency has disseminated in the ISE.

2. Audit:
   Program review framework/inspection process for examining compliance with the ISE Privacy Guidelines in the following areas (ISE Privacy Guidelines section identified):
   a. Compliance with laws [Section 2] (Compliance with general and specific laws applicable to the agency)
   b. Purpose limitation (terrorism-related) [Section 3]
   c. Identification of PI [Section 4(a)]
   d. Notice mechanisms [Section 4(b)]
   e. Data quality [Section 5]
   f. Data security [Section 6]
   g. Accountability, enforcement, and audit [Section 7]

\textsuperscript{51} Section 1(b) of the ISE Privacy Guidelines defines \textit{protected information} as “information about United States citizens and lawful permanent residents that is subject to information privacy or other legal protections under the Constitution and Federal laws of the United States. For the intelligence community, protected information includes information about ‘United States persons’ as defined in Executive Order 12333. Protected information may also include other information that the U.S. Government expressly determines by Executive Order, international agreement, or other similar instrument, should be covered by these Guidelines.”
h. Redress [Section 8]
i. Execution, training, and technology [Section 9]
j. Public awareness of agency policies and Procedures [Section 10]
Purpose

The purpose of this document is to identify and discuss potential methods and tools that will enable agencies to comply with the accountability, enforcement, and audit requirements set forth in Section 7 of the ISE Privacy Guidelines. There are many existing Federal requirements and processes that agencies can use to conduct effective audit and oversight of compliance with the ISE Privacy Guidelines:

1. **Identify the Persons Assigned to Privacy and Civil Liberties Roles:**
   a. Section 12(a) of the ISE Privacy Guidelines requires that “[e]ach agency’s senior official with overall agency-wide responsibility for information privacy issues (as designated by statute or Executive Order, or as otherwise identified in response to the Office of Management and Budget (OMB) Memorandum M-05-08[53] dated February 11, 2005), shall [unless another official is better situated to perform this role] directly oversee the agency’s implementation of and compliance with these Guidelines (ISE Privacy Official).”[54]
   b. The ISE Privacy Guidelines further state that the ISE Privacy Official shall be responsible for ensuring that “(i) the agency’s policies, procedures, and systems are appropriately designed and executed in compliance with these guidelines, and (ii) changes are made as necessary.”[55]
   c. In most instances, the ISE Privacy Official’s duties will be handled by each agency’s statutory privacy officer or the person appointed as the Senior Agency Official for Privacy (SAOP) under OMB M-05-08. Some agencies, however, also

---

52 The Background and Commentary section is provided as a resource concerning the general principles applicable to each ISE Privacy Guidelines requirement addressed. It is not a binding interpretation of law, regulation, or policy.

53 OMB Memorandum 05-08 (M-05-08), Designation of Senior Agency Official for Privacy, requires that each executive department and agency appoint a Senior Agency Official for Privacy to oversee privacy development and implementation. OMB guidance specifically requires that the Official’s role “include reviewing the agency’s information privacy procedures to ensure that they are comprehensive and up-to-date, and where additional or revised procedures may be called for, working with the relevant agency offices in the consideration, adoption, and implementation of such procedures.” OMB M-05-08 also requires that this official review existing departmental and component-level privacy policies and procedures to: “ensure the agency’s full compliance with Federal laws, regulations, and policies relating to information privacy, such as the Privacy Act.”

54 ISE Privacy Guidelines, Section 12(a).

55 “The ISE Privacy Official should be familiar with the agency’s activities as they relate to the ISE, possess all necessary security clearances, and be granted the authority and resources, as appropriate, to identify and address privacy and other legal issues arising out of the agency’s participation in the ISE. Such authority should be exercised in coordination with the agency’s [senior ISE official].” ISE Privacy Guidelines, Section 12(a).
have separate components (e.g., the U.S. Department of Homeland Security [DHS] Office for Civil Rights and Civil Liberties) that handle civil rights and civil liberties issues (e.g., racial profiling) that are beyond the scope of the duties of statutory and OMB-required privacy officials. In addition to appointing an ISE Privacy Official, these agencies may want to consider appointing an ISE point person from civil rights and civil liberties offices where those functions are separate from the SAOP or the statutory privacy officer duties.

2. **Leverage Existing Agency Training Programs:**
   a. OMB M-05-08 privacy officials (who have assumed the role of ISE Privacy Official in most agencies) are also required to “ensure the agency’s employees and contractors receive appropriate training and education regarding the information privacy laws, regulations, policies, and procedures governing the agency’s handling of personal information.”
   b. Agencies generally provide specialized training with respect to one or more of the following: Privacy Act, Freedom of Information Act, E-Government Act, the handling of Sensitive but Unclassified (proposed as Controlled Unclassified Information [CUI]) and classified information, and/or computer security requirements.
   c. These existing training procedures could be enhanced, where necessary, to do the following:
      i. Ensure employee awareness of proper access, use, and disclosure of PI in the ISE.
      ii. Provide training for personnel in agency policies for reporting noncompliance with agency-developed ISE policies and procedures.
      iii. Ensure that employees are aware of penalties for misuse of information in the ISE.
      iv. Use existing or develop modified agency policies for reporting violations of agency ISE privacy and other civil liberties protection policies to designated authorities within the agency.

3. **Leverage Existing Internal Agency Processes, Policies and Procedures, and Oversight Resources:**
   a. Processes. Existing privacy and other review processes and resources could be leveraged as part of ISE oversight, such as:
      i. Information sharing review boards or councils.
      ii. Privacy Impact Assessment processes.
      iii. Civil rights and civil liberties office review (where separate from the M-05-08 or Privacy Officer functions).
iv. Data integrity boards.

v. National Security Systems participating in the ISE can leverage the security controls, safeguards, standards, and countermeasures being defined by both the Committee on National Security Systems (CNSS) and the Director of National Intelligence (DNI) Certification and Accreditation (C&A) Transformation initiatives. These initiatives embrace the National Institute of Standards and Technology (NIST) Risk Management Framework (RMF) as outlined in Special Publication 800.53.

b. Policies and Procedures. Existing policies and procedures regarding the handling, sharing, and use of sensitive information may provide for oversight, audit, and accountability for PI, but if they do not, they should be amended to provide needed policies and procedures. Where necessary and as appropriate, these amendments could provide for the following with respect to information used and shared in the ISE:

i. Maintenance of records that are available for reasonable audit and inspection by appropriate officials or entities.\(^{56}\)

ii. “[I]nspection and audit in such a manner so as to protect the confidentiality and sensitivity of participating agency criminal intelligence information.”\(^{57}\)

iii. Encouragement of active agency employee participation in oversight, enforcement, auditing, and compliance.

iv. Periodic reviews of the content of PI disseminated and received in the ISE in order to ensure compliance with the ISE Privacy Guidelines.

v. Random auditing of audit trails and other information maintained regarding the agency’s use and dissemination of PI in the ISE.\(^{58}\)

c. Oversight Resources. Agency Inspectors General—In addition to ISE privacy officials (who will generally have oversight but not auditing functions), most of

---

\(^{56}\) Agency-specific authorities and mission may determine the information to be captured in transaction logs; i.e., the operations, recipients, or communications about which the agency will maintain auditable records. For example, U.S. Department of Justice-funded systems maintaining “criminal intelligence information” must maintain records indicating “who has been given information, the reason for release of the information, and the date of each dissemination.” See 28 CFR § 23.20(g).

\(^{57}\) See U.S Department of Justice, 28 CFR § 23.20(n), which states that:

A participating agency of an interjurisdictional intelligence system must maintain in its agency files information which documents each submission to the system and supports compliance with project entry criteria. Participating agency files supporting system submissions must be made available for reasonable audit and inspection by project representatives. Project representatives will conduct participating agency inspection and audit in such a manner so as to protect the confidentiality and sensitivity of participating agency intelligence records.

the Federal participants in the ISE have their own Inspector General’s Office. The Inspectors General conduct and supervise audits and investigations relating to the programs and operations of the organizations for which they are responsible. They also recommend policies for activities designed to promote economy, efficiency, and effectiveness in the administration of the programs they oversee.\textsuperscript{59}

i. Inspectors General can help to ensure that their agencies comply with the ISE Privacy Guidelines.

ii. Investigations of suspected violations should “focus principally on systemic measures to avoid future violations.”\textsuperscript{60}

4. **Use Existing Tools Available for Implementing Audit and Review Mechanisms to Ensure Accountability, Enforcement, and Audit**, such as strong audit trails.\textsuperscript{61} As emphasized in the Markle Foundation report, strong audit trails (or logs) are needed to ensure protection of privacy and civil liberties in the ISE.\textsuperscript{62} An audit trail is “a record showing who has accessed an IT system and what operations the user has performed during a given period.”\textsuperscript{63} The audit trail, primarily established for security purposes, allows the project [agency] to track the file, maintain compliance, and notify a recipient if it turns out there is invalid information in a file.\textsuperscript{64}

\begin{itemize}
  \item \textsuperscript{59} 5 U.S.C. § 1 \textit{et seq.} \url{http://www4.law.cornell.edu/uscode/html/uscode05a/usc_sup_05_5_10_sq2.html}
  \item \textsuperscript{60}  \textit{Protecting America’s Freedom in the Information Age: A Report of the Markle Foundation Task Force}, at p. 33. \url{http://www.markle.org/downloadable_assets/nstf_part_1.pdf}
  \item \textsuperscript{61}  OMB M-07-16, May 22, 2007, Attachment 1 C, provides the following “Log and Verify” security requirement to prevent and identify breaches of sensitive Federal information: “Log all computer-readable data extracts from databases holding sensitive information and verify each extract, including whether sensitive data has been erased within 90 days or its use is still required.”
  \item \textsuperscript{62}  “Consistent with a vigorous defense against terrorism, these guidelines envision tools that create audit trails of parties who carry out searches, that anonymize and minimize information to the greatest extent possible, and that prevent both the intentional and unintentional dissemination of irrelevant information to unauthorized persons or entities.” \textit{Protecting America’s Freedom in the Information Age: A Report of the Markle Foundation Task Force}, at p. 33. \url{http://www.markle.org/downloadable_assets/nstf_part_1.pdf}
  \item \textsuperscript{64}  Institute for Intergovernmental Research,  \textit{Frequently Asked Questions Regarding 28 CFR Part 23}, FAQ Number 20. \url{http://www.iir.com/28cfr/FAQ.htm#q20}
\end{itemize}
5. **Consider Using Emerging Tools and Technologies:**

There are many emerging technologies to assist agencies in tracking the ISE in order to ensure accountability, provide enforcement, and enhance auditing capabilities. Technologies that ISE participants may consider include, but are not limited to:

- Permissioning systems
- Hashing
- Data anonymization
- Immutable Audit logs
- Authentication

These tools and technologies may be considered when conducting system development and in the development or modification of agency policies designed to ensure compliance with the ISE Privacy Guidelines.

The following is a list of authorities that may assist ISE participants in developing their accountability, enforcement, and audit policies and procedures for PI in the ISE:

**Statutes**

[http://www4.law.cornell.edu/uscode/html/uscode05a/usc_sup_05_5_10_sq2.html](http://www4.law.cornell.edu/uscode/html/uscode05a/usc_sup_05_5_10_sq2.html)

**Regulations**

28 CFR § 23.20 (requiring that projects maintaining criminal intelligence information ensure that administrative, technical, and physical safeguards (including audit trails) are adopted to ensure against unauthorized access and against intentional or unintentional damage).

**Policy Guidance and Standards**

OMB Memorandum M-05-08 (February 11, 2005), *Designation of Senior Agency Officials for Privacy*, [http://whitehouse.gov/omb/memoranda/fy2005/m05-08.pdf](http://whitehouse.gov/omb/memoranda/fy2005/m05-08.pdf) (requiring that every Federal agency appoint a Senior Agency Official for Privacy to oversee privacy development, implementation, and oversight).

---

65 Markle Foundation, *Implementing a Trusted Information Sharing Environment, Using Immutable Logs to Increase Security, Trust, and Accountability* (2006). “Immutable logs are tamper resistant logs of user activity in the information sharing environment. Audit of immutable logs would allow authorized officials to trace the origin of a piece of information, who has accessed it, under what circumstances, pursuant to what authority, and how it actually has been used, thus providing a mechanism to oversee or measure compliance with privacy and security rules. As a mechanism for oversight and review of system usage, immutable logs are a key component of accountability.” *Id.* at p, 70.

66 ISE Privacy Guidelines, Section 9(c), Technology.
Commentators

RESOURCES AND TOOLS

In developing a program review framework, agencies may find it expedient to add oversight of ISE-specific processes involving protected information (PI) in the ISE to the portfolios of agency offices/officials already responsible for maintaining and handling personally identifiable information (PII). ISE-specific processes that may be merged into existing PII handling functions include:

1. Access, use, and disclosure of PI.
2. Training regarding the access, use, and disclosure of PI.
3. Maintenance of records/logs regarding access to/disclosure of/receipt of PI.
4. Review of compliance with PI handling policies and practices.
5. Investigation of reported/identified violations of PI handling practices.
6. Procurement/development of information technology for administering PI.
7. Audit, inspection, and investigation of agency programs.

The Office of the Director of National Intelligence has undertaken studies of existing and emerging privacy-enhancing technologies and will make the results available to agencies when completed.
Page intentionally left blank.
I. Background and Applicability

In this section, agencies may describe or reference introductory information about their mission, relationship to the ISE, and purpose for establishing this policy. Agencies may also articulate the anticipated benefits of successfully having implemented this policy.

II. Compliance With Laws

In this section, agencies may consider including a statement regarding compliance with the Constitution and all applicable laws and Executive Orders relating to protected information.

In addition, agencies may describe their rules assessment process, including any legal restrictions applicable to protected information. Agencies subject to constraints on seeking and obtaining certain kinds of information may wish to represent that protected information has been lawfully obtained and shared.

III. Purpose Specification

In this section, agencies may consider including a description of internal policies and procedures that ensure that the agency’s access to and use of protected information available through the ISE is consistent with the authorized purpose of the ISE.

IV. Identification of Protected Information to Be Shared Through the ISE

In this section, agencies may consider identifying data holdings that contain protected information to be shared in the ISE and describing the mechanisms, as feasible, to ensure protected information has been reviewed to meet the ISE Privacy Guidelines requirements.

In addition, agencies may consider including their notice mechanisms for enabling ISE participants to determine the nature of the information so the information can be handled appropriately.

- Agencies should reference the Appendix D—Key Issues Guidance on Notice Mechanisms to ensure the core elements are included in this section.

V. Data Quality

In this section, agencies may consider referencing or reproducing their policies and procedures to facilitate the prevention, identification, and correction of any errors in protected information so that information shared in the ISE is accurate and has not erroneously been shared through the ISE.

In addition, agencies may consider including the procedure for reporting errors when it is determined that information shared in the ISE originating from another agency contains erroneous information, including information incorrectly merged and information that lacks adequate context such that the rights of individual may be affected.

Also, agencies may consider referencing or reproducing policies and procedures that address:
- Criteria for merging protected information about an individual from two or more sources;
• How alleged errors and deficiencies of protected information will be timely investigated and corrected, deleted, or “quarantined” from use; and
• How information will be retained only so long as it is relevant and timely for appropriate use by the agency, including procedures to update, delete, or “quarantine” protected information that is outdated or irrelevant.

Agencies should reference Appendix D—Key Issues Guidance on Data Quality to ensure the core elements are included in this section.

VI. Data Security

In this section, agencies may consider reproducing or describing the physical, technical, and administrative measures they will use to safeguard protected information shared through the ISE.

Agencies should reference Appendix D—Key Issues Guidance on Data Security to ensure the core elements are included in this section.

VII. Accountability, Enforcement, and Audit

In this section, agencies may reference or describe internal policies and procedures that discuss:

• Reporting, investigating, and responding to violations of agency policy;
• The training of personnel authorized to share protected information through the ISE; and
• Plans for audits and reviews with respect to the ISE.

Agencies should reference Appendix D—Key Issues Guidance on Accountability, Enforcement, and Audit to ensure the core elements are included in this section.

VIII. Redress

In this section, agencies may reference or describe internal policies and procedures to address complaints from persons regarding protected information about them that is under agency control.

Agencies should reference Appendix D—Key Issues Guidance on Redress to ensure the core elements are included in this section.

IX. Execution, Training, and Technology

In this section, agencies may reference or describe internal policies and procedures for training, business process changes, and system designs intended to ensure that ISE privacy protections are implemented appropriately.

X. Awareness

In this section, agencies may reference or describe internal policies and procedures regarding anticipated steps for facilitating public awareness of activities to implement the ISE Privacy Guidelines.
XI. Non-Federal Entities

In this section, agencies may reference or describe policies and procedures for determining whether non-federal recipients of protected information have privacy protections “at least as comprehensive” as those specified in the ISE Privacy Guidelines. Agencies should focus on non-federal entities with which they have sharing arrangements, other than the fusion centers, because there is a mechanism in place to make that determination.

XII. Governance

In this section, an agency may identify the designated ISE Privacy Official responsible for ensuring the agency’s compliance with the ISE Privacy Guidelines. In addition, an agency may consider including a description of any governance structure that is in place to handle ISE-related issues.

XIII. General Provisions

In this section, agencies may consider referencing or including any general provisions necessary for the successful implementation of the ISE Privacy Guidelines as well as definitions related to the ISE.
Page is intentionally left blank.
Steps for Assessing Federal Agency Systems of Records—Definitional Scope of the ISE Privacy Guidelines

This paper is designed to guide agencies through the process of applying the Information Sharing Environment (ISE) Privacy Guidelines to agency systems (“systems” is used herein to refer to information systems, databases, and data sets, as appropriate) containing protected information within the scope of the ISE, i.e., terrorism-related information.

Background

The suggested approach relies on the definitions of “terrorism information, including weapons of mass destruction (TI),” “homeland security (HS) information,” and “law enforcement information related to terrorism (LE/T)”67 (hereafter collectively referred to as terrorism-related information or TRI). Additionally, it recognizes the purpose and focus of the ISE Privacy Guidelines and their specific process requirements. The approach, described below, also acknowledges the ISE goal of facilitating, coordinating, and expediting access to protected information.

While the definitions in Guideline 2, Guideline 5, and the 9/11 Commission Act of 2007 clearly delineate the types of information covered both within the ISE and subject to the ISE Privacy Guidelines, additional guidance has been developed on how ISE Privacy Officials can apply these definitions to their agency’s systems and sharing arrangements.

Agencies should understand that the ISE Privacy Guidelines apply to existing information sharing arrangements and systems as well as new information sharing arrangements and systems.

Approach

The Privacy and Civil Liberties Implementation Guide for the Information Sharing Environment (Implementation Guide) provides a recommended process when applying the ISE Privacy Guidelines to agency ISE privacy protection policies and information sharing arrangements and systems. However, prior to implementing the ISE Privacy Guidelines, privacy officials should identify their agency’s information arrangements and systems and then assess the applicability of the systems under the ISE Privacy Guidelines (i.e., identify the type of information collected, stored, and shared within these systems). This initial step will assist agencies in effectively and efficiently applying the ISE Privacy Guidelines to covered information sharing arrangements and systems.

To assist in identifying systems that are subject to the ISE, three overarching system categories have been identified for agencies to utilize when initially assessing their systems. TRI is terrorism-related information as defined by the ISE Privacy Guidelines.

**Category I**
- Systems that exclusively contain TRI
- Initially identified on "Green Pages"
- In ISE if system contains PI and is shared outside the agency

**Category II**
- Not designed to contain only TRI but may contain some TRI
- Information is in the ISE if it is TRI, contains PI, and is shared outside agency
- Non-TRI, if severable, is not subject to the ISE

**Category III**
- Does not contain any TRI
- Administrative, regulatory information
- Could become TRI if connection or link is made to TRI through the investigative/analytical process and becomes Catagory I or Catagory II system PI.
The first and third categories are relatively clear, and initial ISE Privacy Guidelines implementation should proceed on the basis that Category I systems are subject to the ISE Privacy Guidelines and that Category III systems are not covered by the ISE Privacy Guidelines. Requests for information from a Category III system should be handled on a case-by-case basis.

For purposes of applying the ISE Privacy Guidelines to Category II systems, a decision must first be made as to whether or not data meets the ISE parameters. The ISE Privacy Guidelines require that each agency identify its data holdings that contain protected information to be shared. In making determinations about Category II systems, privacy officials should address what, if any, system information is TRI, contains protected information (PI) that will be shared and, if shared, with whom it will be shared.

Follow these steps:

**Step 1**
- Evaluate agency systems to determine what Category the system falls under.

**Step 2**
- Starting with Category I systems (Green Pages), apply ISE Privacy Protection Policy to PI if system information will be shared outside the agency.
- Assess privacy and civil liberties protections.

**Step 3**
- For Category II systems, identify information that is TRI.
- Does it contain protected information?
- Will it be shared outside the agency?
- Assess privacy and civil liberties protections.

**Step 4**
- Develop ISE privacy protection policies and procedures needed to fill gaps and meet ISE Privacy Guidelines requirements.

**Step 5**
- For Category I and Category II systems that contain terrorism-related information that is PI and will be shared with other agencies, apply agency ISE Privacy Protection Policy.

ISE Privacy Guidelines Definitions

Information Sharing Environment (ISE)—The Information Sharing Environment (ISE) is an approach to the sharing of terrorism and homeland security information that is being implemented through a combination of policies, procedures, and technologies designed to facilitate access to critical information by all relevant entities. The ISE serves the dual imperatives of enhanced information sharing to combat terrorism and protecting the information privacy and other legal rights of Americans in the course of increased information access and collaboration across and among levels of government and elements of the private sector. The ISE is being developed pursuant to the Intelligence Reform and Terrorism Prevention Act of 2004, as amended by the Implementing Recommendations of the 9/11 Commission Act of 2007 (IRTPA, Section 1016) and Executive Order 13388, entitled “Further Strengthening the Sharing of Terrorism Information to Protect Americans.”

ISE Privacy Official—The ISE Privacy Official is the official responsible for directly overseeing the agency’s implementation of and compliance with the ISE Privacy Guidelines. The agency’s senior official with overall agency-wide responsibility for information privacy issues (as designated by statute or executive order or as otherwise identified in response to the Office of Management and Budget (OMB) Memorandum M-05-08 dated February 11, 2005) will serve as the ISE Privacy Official, unless the head of the agency determines that a different official would be better situated to perform this role. See Section 12(a) of the ISE Privacy Guidelines.

ISE Privacy Guidelines Committee—The ISE Privacy Guidelines Committee is a standing committee established by the PM-ISE and is composed of each Information Sharing Council agency’s ISE Privacy Official. The Committee provides ongoing guidance on the implementation of the ISE Privacy Guidelines, so that, among other things, agencies follow consistent interpretations of applicable legal requirements, avoid duplication of effort, share best practices, and have a forum for resolving issues on an interagency basis. See Section 12(b) of the ISE Privacy Guidelines.

PM-ISE—PM-ISE stands for the Program Manager for the Information Sharing Environment. This position was established by IRTPA Section 1016(t) and is further described within this document.

Protected Information—Protected Information is information about U.S. citizens and lawful permanent residents that is subject to information privacy or other legal protections under the U.S. Constitution and federal laws of the United States. Protected information may also include other information that the U.S. government expressly determines (by Executive Order, international agreement, or other similar instrument) should be covered by these Guidelines. For the Intelligence Community, protected information includes information about United States persons as defined in Executive Order 12333, which provides that a U.S. person is “a United States citizen, an alien known by the intelligence agency concerned to be a permanent resident alien, an unincorporated association substantially composed of United States citizens or permanent resident aliens, or a corporation incorporated in the United States, except for a corporation directed and controlled by a foreign government or governments.” (See Section 1 of the ISE Privacy Guidelines.) The definition of protected information may also include legal protections that are not strictly related to privacy. For example, information relating to the exercise of rights under the First Amendment may be subject to constitutional protections. And for the
Intelligence Community, information about U.S. corporations or associations that does not reveal personally identifiable information may nonetheless be subject to protection under Executive Order 12333. However, it is anticipated that in most cases, protections will focus on personally identifiable information about U.S. citizens and lawful permanent residents.

Terrorism Information—Terrorism Information is defined in IRTPA Section 1016 (codified at 6 USC 485) as all information, whether collected, produced, or distributed by intelligence, law enforcement, military, homeland security, or other activities relating to:

- The existence, organization, capabilities, plans, intentions, vulnerabilities, means of financial or material support, or activities of foreign or international terrorist groups or individuals or of domestic groups or individuals involved in transnational terrorism;
- Threats posed by such groups or individuals to the United States, United States persons, or United States interests, or to those of other nations;
- Communications of or by such groups or individuals; or
- Groups of individuals reasonably believed to be assisting or associated with such groups or individuals.

The definition includes weapons of mass destruction information.

Homeland Security Information—Homeland Security Information, as derived from the Homeland Security Act of 2002, Public Law 107-296, Section 892(f)(1) (codified at 6 USC 482(f)(1)) is defined as any information possessed by a state, local, tribal, or federal agency that:

- Relates to a threat of terrorist activity;
- Relates to the ability to prevent, interdict, or disrupt terrorist activity;
- Would improve the identification or investigation of a suspected terrorist or terrorist organization; or
- Would improve the response to a terrorist act.

Law Enforcement Information—Law Enforcement Information is defined as any information obtained by or of interest to a law enforcement agency or official that is both:

- Related to terrorism or the security of our homeland, and
- Relevant to a law enforcement mission, including but not limited to:
  - Information pertaining to an actual or potential criminal, civil, or administrative investigation or a foreign intelligence, counterintelligence, or counterterrorism investigation;
  - Assessment of or response to criminal threats and vulnerabilities;
  - The existence, organization, capabilities, plans, intention, vulnerabilities, means, method, or activities of individuals or groups involved or suspected of involvement in criminal or unlawful conduct or assisting or associated with criminal or unlawful conduct;
  - The existence, identification, detection, prevention, interdiction, or disruption of, or response to criminal acts and violations of the law;
  - Identification, apprehension, prosecution, release, detention, adjudication, supervision, or rehabilitation of accused persons or criminal offenders; and
  - Victim/witness assistance.

Weapons of Mass Destruction Information—Weapons of Mass Destruction Information is defined in IRTPA Section 1016 (codified at 6 USC 485) as information that could reasonably be expected to assist in the development, proliferation, or use of a weapon of mass destruction (including a chemical,
biological, radiological, or nuclear weapon) that could be used by a terrorist or terrorist organization against the United States, including information about the location of a stockpile of nuclear materials that could be exploited for use in such a weapon that could be used by a terrorist or terrorist organization against the United States.

General Questions About the Information Sharing Environment

- What is the Information Sharing Environment (ISE)?
- What is the purpose of establishing the ISE?
- Is the ISE a single database, system, or repository?
- What information will be shared through the ISE?
- What is the position of Program Manager (PM) for the ISE (PM-ISE), and what are its duties?
• Who is the PM-ISE?
• What government agency houses the Office of the PM-ISE?
• What is the ISE Implementation Plan (ISE IP)?
• What is the governance structure for the ISE?
• Where can I find more information about the ISE?

General Questions About the ISE Privacy Guidelines

• What are the ISE Privacy Guidelines?
• To whom do the ISE Privacy Guidelines apply?
• What information is covered by the ISE Privacy Guidelines?
• Apart from privacy, what other legal rights are embraced by the concept of “protected information”?
• What might be the civil rights and civil liberties considerations that apply in the ISE?
• What CR/CL issues might arise for ISE participants?
• What CR/CL issues might arise in the ISE with regard to information collected based solely on an individual’s race, religion, ethnicity, or national origin?
• What CR/CL issues might arise in the ISE with regard to First Amendment-related issues?
• What CR/CL issues might arise in the ISE with regard to Fourth Amendment-related issues?
• What CR/CL issues might arise in the ISE with regard to Fifth and Fourteenth Amendments-related issues?
• Do the ISE Privacy Guidelines override existing laws, such as the Privacy Act?
• How do the ISE Privacy Guidelines protect privacy and other legal rights?
• What is the legal basis for the ISE Privacy Guidelines?
• What is the process for achieving compliance with the ISE Privacy Guidelines?
• How do the ISE Privacy Guidelines relate to the “Fair Information Principles,” the Privacy Act, and other privacy rules?
• What are the specific privacy rules that an ISE user must follow in accessing the ISE?

• How were the ISE Privacy Guidelines developed?

• What was the role of the original Privacy and Civil Liberties Oversight Board?

Federal Agencies

• What is our first step for complying with the ISE Privacy Guidelines?

• How will we resolve issues that cut across federal agencies, such as questions about the application of the Privacy Act or other federal legal requirements that affect more than one agency?

• Who has been designated to chair the ISE Privacy Guidelines Committee?

• Will we receive additional guidance and support for implementing the ISE Privacy Guidelines?

• Can our agency’s existing privacy policy comply with the ISE Privacy Guidelines?

• If, as part of the rules assessment process called for in Section 2 of the ISE Privacy Guidelines, my agency finds that a change in rules would be desirable, what should it do?

• How should my agency deal with the legal exemptions that may apply to certain agency activities?

• What data holdings must be identified and assessed for ISE access?

State, Local, and Tribal (SLT) Agencies

• Can nonfederal agencies participate in the ISE?

• Are nonfederal entities required to comply with the ISE Privacy Guidelines?

• How is the federal government helping state, local, and tribal authorities to share information?

• Were state, local, and tribal government officials included in the planning of the ISE?

• How do state, local, and tribal governments obtain access to protected information in the ISE?

• What information currently collected and maintained by my SLT agency is protected by the ISE Privacy Guidelines?
• **How does an SLT agency determine what protected information will be shared through the ISE?**

• **Is our SLT agency-approved privacy policy sufficient for ISE Privacy Guidelines compliance?**

• **Does compliance with 28 CFR Part 23 enable us to participate in the ISE?**

• **Does participation in a statewide fusion center meet the requirements to participate in the ISE?**

• **Will SLT agencies that currently share information with federal agencies be able to continue sharing information in light of the ISE Privacy Guidelines?**

**Other Nonfederal Entities**

• **Apart from state, local, and tribal governments, what other nonfederal entities will be participating in the ISE?**

• **Are private sector entities involved in the planning of the ISE?**

• **What are the guidelines for sharing with private sector entities?**

• **What are the guidelines for sharing with foreign partners?**

• **Do the ISE Privacy Guidelines cover personally identifiable information about non-U.S. persons that is made available by foreign partners?**

**Definitions**

**Information Sharing Environment (ISE)**—The Information Sharing Environment (ISE) is an approach to the sharing of information related to terrorism that is being implemented through a combination of policies, procedures, and technologies designed to facilitate the sharing of critical information by all relevant entities. The ISE serves the dual imperatives of enhanced information sharing to combat terrorism and protecting the information privacy and other legal rights of Americans in the course of increased information access and collaboration. The ISE is being developed by bringing together, aligning, and building upon existing information sharing policies and business processes and technologies (systems), and by promoting a culture of information sharing through greater collaboration. It is being developed pursuant to Section 1016 of the Intelligence Reform and Terrorism Prevention Act of 2004, as amended by the Implementing Recommendations of the 9/11 Commission Act of 2007 (IRTPA) and Executive Order 13388, titled "Further Strengthening the Sharing of Terrorism Information to Protect Americans."

**IRTPA**—IRTPA stands for the Intelligence Reform and Terrorism Prevention Act of 2004, as amended by the Implementing Recommendations of the 9/11 Commission Act of 2007, Public
Law 108-458, as amended by Public Law 110-53. The ISE is covered by Section 1016 of IRTPA, codified at 6 USC 485.

**ISE Privacy Official**—The ISE Privacy Official is the official responsible for directly overseeing the agency’s implementation of and compliance with the ISE Privacy Guidelines. The agency’s senior official with overall agencywide responsibility for information privacy issues (as designated by statute or Executive Order or as otherwise identified in response to the Office of Management and Budget (OMB) Memorandum M-05-08 dated February 11, 2005) will serve as the ISE Privacy Official, unless the head of the agency determines that a different official would be better situated to perform this role. See Section 12(a) of the ISE Privacy Guidelines.

**ISE Privacy Guidelines Committee**—The ISE Privacy Guidelines Committee is a standing committee established by the PM-ISE composed of each Information Sharing Council agency’s ISE Privacy Official. The Committee provides ongoing guidance on the implementation of the ISE Privacy Guidelines, so that, among other things, agencies follow consistent interpretations of applicable legal requirements, avoid duplication of effort, share best practices, and have a forum for resolving issues on an interagency basis. See Section 12(b) of the ISE Privacy Guidelines.

**PM-ISE**—PM-ISE stands for the Program Manager for the Information Sharing Environment. This position was established by IRTPA Section 1016(f) and is further described within this document.

**Protected Information**—Protected Information is information about U.S. citizens and lawful permanent residents that is subject to information privacy or other legal protections under the U.S. Constitution and federal laws of the United States. Protected information may also include other information that the U.S. government expressly determines (by Executive Order, international agreement, or other similar instrument) should be covered by these Guidelines. For the intelligence community, protected information includes information about United States persons as defined in Executive Order 12333, which provides that a U.S. person is “a United States citizen, an alien known by the intelligence agency concerned to be a permanent resident alien, an unincorporated association substantially composed of United States citizens or permanent resident aliens, or a corporation incorporated in the United States, except for a corporation directed and controlled by a foreign government or governments.” See Section 1 of the ISE Privacy Guidelines. The definition of protected information may also include legal protections that are not strictly related to privacy. For example, information relating to the exercise of rights under the First Amendment may be subject to constitutional protections. And for the intelligence community, information about U.S. corporations or associations that does not reveal personally identifiable information may nonetheless be subject to protection under Executive Order 12333. However, it is anticipated that, in most cases, protections will focus on personally identifiable information about U.S. citizens and lawful permanent residents.

**Terrorism Information**—Terrorism Information is defined in IRTPA Section 1016 (codified at 6 USC 485) as all information, whether collected, produced, or distributed by intelligence, law enforcement, military, homeland security, or other activities relating to:

- The existence, organization, capabilities, plans, intentions, vulnerabilities, means of financial or material support, or activities of foreign or international terrorist groups or individuals, or of domestic groups or individuals involved in transnational terrorism;
- Threats posed by such groups or individuals to the United States, United States persons, or United States interests, or to those of other nations; or
- Communications of or by such groups or individuals; or
• Groups of individuals reasonably believed to be assisting or associated with such groups or individuals.
The definition includes weapons of mass destruction information.

**Homeland Security Information**—Homeland Security Information, as derived from the Homeland Security Act of 2002, Public Law 107-296, Section 892(f)(1) (codified at 6 USC 482(f)(1)), is defined as any information possessed by a state, local, tribal, or federal agency that:
• Relates to a threat of terrorist activity;
• Relates to the ability to prevent, interdict, or disrupt terrorist activity;
• Would improve the identification or investigation of a suspected terrorist or terrorist organization; or
• Would improve the response to a terrorist act.

**Law Enforcement Information**—Law Enforcement Information is defined as any information obtained by or of interest to a law enforcement agency or official that is both:
• Related to terrorism or the security of our homeland, and
• Relevant to a law enforcement mission, including but not limited to:
  • Information pertaining to an actual or potential criminal, civil, or administrative investigation or a foreign intelligence, counterintelligence, or counterterrorism investigation;
  • An assessment of or response to criminal threats and vulnerabilities;
  • The existence, organization, capabilities, plans, intention, vulnerabilities, means, method, or activities of individuals or groups involved or suspected of involvement in criminal or unlawful conduct or assisting or associated with criminal or unlawful conduct;
  • The existence, identification, detection, prevention, interdiction, or disruption of or response to criminal acts and violations of the law;
  • Identification, apprehension, prosecution, release, detention, adjudication, supervision, or rehabilitation of accused persons or criminal offenders; and
  • Victim/witness assistance.

**Weapons of Mass Destruction Information**—Weapons of Mass Destruction Information is defined in IRTPA Section 1016 (codified at 6 USC 485) as information that could reasonably be expected to assist in the development, proliferation, or use of a weapon of mass destruction (including a chemical, biological, radiological, or nuclear weapon) that could be used by a terrorist or terrorist organization against the United States, including information about the location of a stockpile of nuclear materials that could be exploited for use in such a weapon that could be used by a terrorist or terrorist organization against the United States.

**Civil Rights**—The term *civil rights* refers to those rights and privileges of citizenship and equal protection that the state is constitutionally bound to guarantee all citizens regardless of race, religion, sex, or other characteristics unrelated to the worth of the individual. Protection of civil rights imposes an affirmative obligation upon government to promote equal protection under the law. These civil rights to personal liberty are guaranteed to all United States citizens by the Thirteenth and Fourteenth Amendments and by acts of Congress. Generally, the term *civil rights* involves positive (or affirmative) government action to protect against infringement.

**Civil Liberties**—The term *civil liberties* refers to fundamental individual rights such as freedom of speech, press, or religion; due process of law; and other limitations on the power of the
government to restrain or dictate the actions of individuals. They are the freedoms that are guaranteed by the Bill of Rights—the first ten Amendments—to the Constitution of the United States. Civil liberties offer protection to individuals from improper government action and arbitrary governmental interference.
Information Sharing Environment Privacy Guidelines

Frequently Asked Questions

General Questions About the Information Sharing Environment

What is the Information Sharing Environment (ISE)?
The Information Sharing Environment (ISE) is an approach to the sharing of information related to terrorism that is being implemented through a combination of policies, procedures, and technologies designed to facilitate the sharing of critical information by all relevant entities. The ISE serves the dual imperatives of enhanced information sharing to combat terrorism and protecting the information privacy and other legal rights of Americans in the course of increased information access and collaboration. The ISE is being developed by bringing together, aligning, and building upon existing information sharing policies and business processes and technologies (systems), and by promoting a culture of information sharing through greater collaboration. It is being developed pursuant to Section 1016 of the Intelligence Reform and Terrorism Prevention Act of 2004, as amended by the Implementing Recommendations of the 9/11 Commission Act of 2007 (IRTPA) and Executive Order 13388, titled “Further Strengthening the Sharing of Terrorism Information to Protect Americans.”

What is the purpose of establishing the ISE?
The ISE will create the conditions by which information can be accessed across agency and jurisdictional boundaries and between the federal government and its state, local, and tribal agency, private sector, and foreign partners in a timely, efficient, and frictionless manner while protecting the information privacy and other legal rights of Americans.

Historically, the sharing of terrorism-related information has taken place within multiple sharing environments and within individual communities of interest, including the intelligence, law enforcement, defense, homeland security, and foreign affairs communities. Each of these communities of interest developed its own legal and operational information sharing framework to accomplish specific mission requirements. As a result, the information sharing environment that existed on 9/11 was not as integrated, interconnected, or robust as the nation required. The purpose of the ISE is to facilitate the sharing and integration of terrorism-related information between and among the agencies and entities comprising the traditional information sharing environments and communities of interest without diminishing individuals’ privacy rights or civil liberties.

Is the ISE a single database, system, or repository?
No. The ISE will not be a massive new information system. Rather, it will provide a new way to access, use, and transmit terrorism-related information through existing systems of the participating agencies. While the ISE will use technology to the maximum extent possible to enhance information sharing, it will not result in the construction of a single interconnected computer system or repository containing all terrorism information.

What information will be shared through the ISE?
The ISE will facilitate the sharing of terrorism information (which includes weapons of mass destruction information), homeland security information, and law enforcement information.
What is the position of Program Manager (PM) for the ISE (PM-ISE), and what are its duties?

IRTPA Section 1016 requires the President to designate an individual to serve as the Program Manager (PM) for the Information Sharing Environment (PM-ISE). The PM-ISE’s duties include:

- Planning, overseeing the implementation of, and managing the ISE.
- Assisting in the development of policies to foster the development and proper operation of the ISE.
- Issuing governmentwide procedures, guidelines, instructions, and functional standards, as appropriate, for the management, development, and proper operation of the ISE.
- Identifying and resolving information sharing disputes between federal departments, agencies, and components.
- Assisting, monitoring, and assessing the implementation of the ISE by federal departments and agencies to ensure adequate progress, technological consistency, and policy compliance and regularly reporting the findings to the U.S. Congress.

The PM-ISE will build upon current information sharing efforts across the U.S. government, facilitating change and acting as a catalyst for improving terrorism-related information sharing among ISE communities by working with them to remove barriers and improve information access.

Who is the PM-ISE?

On March 15, 2006, the President designated Ambassador Thomas E. McNamara to serve as the PM-ISE. Ambassador McNamara possesses extensive background in national security matters, political-military affairs, counterterrorism, and counternarcotics.

The Ambassador is a career diplomat whose postings overseas include Colombia, Russia, Congo, and France. In the 1980s, he was a Deputy Assistant Secretary of State, National Security Council (NSC) Director, and Ambassador to Colombia. On his return from Colombia in 1991, he served President George H. W. Bush as Special Assistant for National Security Affairs before returning to the State Department as Ambassador-at-Large for Counter Terrorism and Assistant Secretary of State for Political-Military Affairs. In 1998, he was appointed the Special Negotiator for Panama. Upon his retirement from government service in 1998, he became President and CEO of the Americas Society and the Council of the Americas in New York. Following the attacks of September 11, 2001, Ambassador McNamara was asked to return to the State Department and served as the Senior Advisor for Counter Terrorism and Homeland Security to the Secretary and Deputy Secretary until 2004. Most recently, in addition to serving as the PM-ISE, the Ambassador has been an adjunct professor in the Elliott School of International Affairs at The George Washington University in Washington, DC.

What government agency houses the Office of the PM-ISE?

In June 2005, the President directed that the Office of the PM-ISE be located in the Office of the Director of National Intelligence (ODNI).
What is the ISE Implementation Plan (ISE IP)?
The Information Sharing Environment (ISE) Implementation Plan (ISE IP) (November 2006) is a three-year plan that implements the 11 requirements set forth in IRTPA Section 1016 (e) and by the President in his December 2005 Memorandum titled "Guidelines and Requirements in Support of the Information Sharing Environment." The ISE IP describes the actions that the federal government intends to carry out over a three-year period in coordination with state, local, and tribal agencies; private sector entities; and foreign partners.

A copy of the ISE Implementation Plan can be found at www.ise.gov. Chapter 9 addresses protections for information privacy and civil liberties in implementing the ISE.

What is the governance structure for the ISE?
The ISE has a three-part governance structure:

1. Program Manager (PM) for the ISE (PM-ISE)
2. Information Sharing Council (ISC)
3. Information Sharing Policy Coordination Committee (ISPCC)

The function of the Program Manager is described in a separate frequently asked question.

The Information Sharing Council is an interagency forum, established by IRTPA Section 1016 and Executive Order 13388, to advise the President and the Program Manager and to provide for coordination among the Federal agencies participating in the ISE. Chairied by the PM, the ISC is a means for the PM to assess progress among ISE communities. The ISC has established two subcommittees to address local, state, and tribal agency and private sector issues. These subcommittees are cochaired by the U.S. Department of Homeland Security (DHS) and the U.S. Department of Justice (DOJ).

The Information Sharing Policy Coordination Committee was established in June 2006 by the President to address major information sharing policy issues, including the resolution of PM-raised issues, and to provide policy analysis and recommendations for consideration by the more senior committees of the Homeland Security Council (HSC) and National Security Council (NSC). The Program Manager is also a member of ISPCC.

The White House Privacy and Civil Liberties Oversight Board was established to provide advice and counsel on the development and implementation of policy to the President or to the head of any executive department or agency. IRTPA Section 1016 required consultation with the PCLOB in protecting the information privacy rights, civil rights, and other legal rights of Americans with regard to ISE development and use. The PM and ISC worked closely with the PCLOB to ensure the protection of privacy and civil liberties throughout initial ISE development and management. This Board’s statutory term expired on January 30, 2008.

Recently, a restructured Privacy and Civil Liberties Oversight Board (PCLOB) was established by the Implementing Recommendations of the 9/11 Commission Act of 2007 (IRTPA, Section 1061) to help ensure the protection of privacy and civil liberties and ensure that liberty concerns are appropriately considered in efforts to protect the nation against terrorism.

Where can I find more information about the ISE?
More information can be found at www.ise.gov.
General Questions About the ISE Privacy Guidelines

What are the ISE Privacy Guidelines?
In his December 16, 2005, Memorandum to the Heads of Executive Departments and Agencies on “Guidelines and Requirements in Support of the Information Sharing Environment,” the President directed that the Attorney General and the Director of National Intelligence:

- Conduct a review of current executive department and agency information sharing policies and procedures regarding the protection of information privacy and other legal rights of Americans; and
- Develop Guidelines designed to be implemented by executive departments and agencies to ensure that the information privacy and other legal rights of Americans are protected in the development and use of the ISE, including the acquisition, access, use, and storage of personally identifiable information.

In November 2006, the President approved and the Program Manager issued the Guidelines to Ensure that the Information Privacy and Other Legal Rights of Americans are Protected in the Development and Use of the Information Sharing Environment (ISE Privacy Guidelines). The Guidelines present principles for federal departments and agencies to follow to ensure that the information privacy rights and other legal rights of Americans are protected as personally identifiable terrorism-related information is acquired, accessed, used, and stored in the ISE. Simply stated, the ISE Privacy Guidelines establish a framework for sharing such information in the ISE in a manner that protects privacy and other legal rights. The framework balances the dual imperatives of sharing information and protecting privacy by establishing uniform procedures to implement required protections, in particular legal and mission environments. In addition, the framework establishes an ISE privacy governance structure for deconfliction, compliance, and continuous development of privacy guidance.

To whom do the ISE Privacy Guidelines apply?
The ISE Privacy Guidelines apply by their terms to federal agencies in their development and use of the ISE. The Guidelines require each agency to develop a written ISE privacy protection policy that sets forth the mechanisms for implementing the Guidelines. The Guidelines may serve as a model for other entities that enter the ISE arena as terrorism-related information sharing partners.

What information is covered by the ISE Privacy Guidelines?
The ISE Privacy Guidelines apply to protected information.

Apart from privacy, what other legal rights are embraced by the concept of “protected information?”
Information in the ISE may enjoy legal protections that are not strictly related to privacy. For example, information relating to the exercise of civil liberties protected by the Bill of Rights may be subject to constitutional protections. In addition, civil rights laws establish protections for individuals that may need to be considered as information is shared in the ISE. For the Intelligence Community, information about U.S. corporations or associations may be subject to protection under Executive Order 12333. Finally, the term “protected information” may also include other information that the U.S. government expressly determines by Executive Order, international agreement, or other similar instrument should be protected. However, it is anticipated that, in most cases, protections will focus on the privacy of personally identifiable information about U.S. citizens and lawful permanent residents.
What might be the civil rights and civil liberties considerations that apply in the ISE?
As an ISE participant, your agency’s information collection, use, and sharing activities may implicate individuals’ civil rights and civil liberties (CR/CL). Our freedoms are essential to our way of life as Americans. As agency staff go about their duties, they should keep in mind the legal and cultural importance of civil liberties in American life. When a question arises, seek guidance from existing policies and procedures and, if a topic is not covered, raise the issue with a supervisor or agency legal counsel.

Generally, the term “civil rights” refers to the duty of government or certain private actors, such as businesses or landlords, to respect and protect individual rights. In contrast, “civil liberties” typically involve restrictions on government that have the effect of respecting individuals’ freedom to do certain things. See the Definitions of terms for detailed definitions of these terms.

What CR/CL issues might arise for ISE participants?
The most likely areas where such issues might arise are:

- Acquisition of information—e.g., information from an illegal search or otherwise collected in an illegal or improper manner;
- Agency retention or use of information for unlawful or improper purposes—e.g., collection of First Amendment information that is not linked to criminal or national security activity;
- Dissemination of information through the ISE—if information acquired in the ISE is not properly vetted (reviewed for accuracy, completeness, timeliness, and relevancy) or protected and its proper use controlled, then sharing this information with ISE partners may affect the CR/CLs of individuals identified in that information or later subjected to enforcement action based on the information. A good example is information that is later determined to be inaccurate, incomplete, untimely, or irrelevant. The wider the dissemination of this information, the greater the potential harm or disruption to the life of the affected individual—for instance, if that information is used in obtaining a warrant to search an individual’s home or to arrest the individual.

With the national focus on the rapid sharing of terrorism-related information, an area of special vulnerability to CR/CL concerns is the information collected on individuals or groups associating with or assisting suspected terrorists or terrorist organizations.

Other areas of significant CR/CL concern include information collected based solely upon an individual’s race, religion, ethnicity, or national origin; First Amendment issues; Fourth Amendment issues; and due process considerations. These issues are addressed in the next four FAQs, and detailed information on these and other CR/CL issues of concern to ISE participants is provided in the Civil Rights and Civil Liberties Protections “Key Issues Guidance” located on the ISE Privacy Protections page of the PM-ISE Web site at www.ise.gov.

What CR/CL issues might arise in the ISE with regard to information collected based solely on an individual’s race, religion, ethnicity, or national origin?
Civil rights protections may need to be considered as intelligence and investigative information is shared in the ISE. An example in the ISE context is the sharing of information that was collected based solely upon an individual’s race, religion, ethnicity, or national origin. Problems can be avoided by developing policies and procedures that ensure that information is not collected solely on this basis (e.g., by ensuring that there is a valid mission purpose in the collection). If this type of information has already been collected, sound policies and procedures will ensure that this type of information is tagged and is not shared with other agencies in the
ISE. Note: information regarding an individual’s race or ethnicity may always be collected when it is a fact associated with identification of the individual or the individual's involvement in a crime or suspicious activities—for example, where the physical description of a bank robbery suspect includes mention of his apparent race or ethnicity. The use of race or ethnicity is subject to heightened scrutiny where it is used as a factor in law enforcement decision making and where actions are predicated on the assumption that individuals of a particular race or ethnicity are more likely to be involved in criminal activity. Reliance on stereotypes is always forbidden.

What CR/CL issues might arise in the ISE with regard to First Amendment-related issues?68
Although these issues usually arise in direct contact situations, sharing of certain types of information may raise First Amendment concerns unless an agency can show that the information was collected for legitimate law enforcement or national security interests. Examples include:

- The sharing of identifying information on antiwar protestors at a lawful rally could raise concerns.
- Collecting and sharing the membership lists of religious or political organizations where that information is exposed to the public and results in regulatory restrictions or public derision such that the group is harmed (e.g., a drop in membership).
- Use of information from video recordings of a public meeting.

If the material was collected for a legitimate law enforcement or national security purpose, additional civil liberties concerns may arise if an individual is misidentified as being associated with a terrorist or terrorist group and the information is used to his or her detriment. Agency policies should address issues such as (1) whether information will include notice of known limitations related to the collection, and (2) how confirmed misidentifications will be purged from the system.

What CR/CL issues might arise in the ISE with regard to Fourth Amendment-related issues?
Concerns here arise when an agency shares materially inaccurate or misleading information that results in the seizure of the misidentified individual or search of his or her property. If the information was initially acquired in violation of the individual’s Fourth Amendment rights, then a possible later order of expungement could apply to the ISE. An expungement order may result from a court suppression hearing or an agency complaint process. These concerns can be addressed through robust data quality measures and notice to information sharing partners.

What CR/CL issues might arise in the ISE with regard to Fifth and Fourteenth Amendments-related issues?
Due process considerations may arise where erroneous information about an individual is shared and leads to the denial of the individual’s entitlements, benefits, status, privileges, or other rights granted by statute. For example, a background check that relies upon this erroneous information results in the individual being denied a job. If the individual was not given the opportunity to challenge the facts underlying the adverse action, this may raise due process concerns.

---

68 The First Amendment prohibits Congress from passing laws that prohibit the free exercise of religion or abridge freedom of speech, freedom of the press, the right of peaceful assembly, or the right to petition the government for redress of grievances. The courts have extended this to include official acts of government officials. Absent a valid law enforcement or mission-related purpose, any government act infringing on these freedoms is prohibited.
Do the ISE Privacy Guidelines override existing laws, such as the Privacy Act?
No. The ISE Privacy Guidelines do not and cannot override existing laws. To the contrary, they require compliance with applicable laws.

How do the ISE Privacy Guidelines protect privacy and other legal rights?
The ISE Privacy Guidelines build on a set of core principles that executive agencies and departments will follow. These principles require specific, uniform action across these entities and reflect basic privacy protections and best practices, requiring agencies to (among other things) identify any protected information to be shared; enable other agencies to determine the nature of the information (e.g., whether it contains information about U.S. persons); assess and document applicable legal and policy rules and restrictions; put in place notice and accountability, enforcement, and audit mechanisms; implement data quality and data security measures; provide redress, as appropriate; and identify an ISE Privacy Official with overall agencywide responsibility for information privacy issues and who will directly oversee the agency’s implementation of and compliance with the ISE Privacy Guidelines.

What is the legal basis for the ISE Privacy Guidelines?
Section 1016(d) of the IRTPA calls for the issuance of guidelines to protect privacy and civil liberties in the development and use of the Information Sharing Environment (ISE). Section 1 of Executive Order 13388, “Further Strengthening the Sharing of Terrorism Information to Protect Americans,” provides that “[t]o the maximum extent consistent with applicable law, agencies shall…give the highest priority to…the interchange of terrorism information among agencies…[and shall] protect the freedom, information privacy, and other legal rights of Americans in the conduct of [such] activities….” The Guidelines implement the requirements under the IRTPA and Executive Order 13388 to protect information privacy rights and provide other legal protections to Americans in the development and use of the ISE.

What is the process for achieving compliance with the ISE Privacy Guidelines?
Because the authorities, policies, and missions of federal departments and agencies differ, the ISE Privacy Guidelines prescribe a process, rather than an end-state, with which each federal ISE participant must comply. This approach requires each department and agency, as bounded by the laws/policies/regulations applicable to it, to:

- Identify and assess laws, Executive Orders, policies, and procedures that apply to protected information that it will make available for ISE dissemination or access.
- Develop policy, as needed, to fill gaps in agency privacy policies and procedures for sharing information in the ISE.
- Document the agency’s ISE privacy-related policies and procedures in a written ISE privacy protection policy.
- Identify data holdings that contain protected information that will be shared through the ISE.
- Assess whether the agency’s ISE privacy protection policy has been applied to protected information to be shared through the ISE and, if not, apply the policy to the information.
- Establish notice mechanisms that allow ISE participants to identify the nature of the protected information so it can be handled in accordance with applicable legal requirements.
- Implement data quality procedures (accuracy, correction methods, retention).
- Use appropriate security measures to safeguard protected information.
Hold personnel accountable, provide training, and enable reviews and audits to verify compliance.
Establish appropriate redress procedures to address complaints from persons regarding information under department or agency control.
Implement guidelines via training, business process changes, and system design.
Facilitate public awareness of agency Privacy Guidelines implementation.

The head of each federal agency participating in the ISE has appointed an ISE privacy official responsible to oversee development and implementation of a compliant privacy policy and accountable for compliance with internal policy in the conduct of terrorism information sharing.

How do the ISE Privacy Guidelines relate to the Fair Information Principles, the Privacy Act, and other privacy rules?
The ISE Privacy Guidelines incorporate, to the extent relevant and applicable, privacy principles such as the Fair Information Principles and other privacy best practices. It is important to note that there are many sets of privacy and related rules that apply to different agencies, activities, and data throughout the federal government; a nonexhaustive 2006 compilation of existing rule sets identified 109 sets of rules. These rules provide specific, substantive privacy protections, and agencies must continue to comply with them. Given the diversity and importance of these rules, the drafters of the Guidelines determined that it was neither legally feasible nor desirable to override those rules and protections through the issuance of a “superset” of substantive privacy rules for all agencies, all activities, and all types of data. Instead, the Guidelines require agencies to assess, document, and enforce the rules applicable to the protected information that they seek to access or make available through the ISE and to take other uniform steps to ensure that appropriate safeguards are put in place to guide the development and use of the ISE. This approach enables agencies to adopt tailored protections while preserving statutory privacy and other legal safeguards.

What are the specific privacy rules that an ISE user must follow in accessing the ISE?
The ISE is not a single computer system or database that users access per se. It is a coordinated, centrally led approach to enhancing the sharing of terrorism-related information. An agency’s participation in the ISE may, therefore, take different forms. As an agency determines what information it can make available to others and what information it will access, it will be required to assess applicable privacy rules and put in place safeguards appropriate to the type of information and sharing involved.

How were the ISE Privacy Guidelines developed?
The ISE Privacy Guidelines were developed by an interagency working group consisting of federal government privacy officials and subject-matter experts. The drafting process was cochaired by the Office of the Director of National Intelligence’s Civil Liberties Protection Officer and the Chief of the U.S. Department of Justice’s Privacy and Civil Liberties Office and included privacy representatives from the members of the Information Sharing Council. For guidance, the group relied on the Fair Information Principles and operating principles contained within the Code of Federal Regulations (CFR), Title 28 (28 CFR), Judicial Administration, Chapter 1—U.S. Department of Justice, Part 23 (28 CFR Part 23). In addition, the group utilized publications by the Markle Foundation, the Center for Democracy and Technology, the Data Privacy and Integrity Advisory Committee of the U.S. Department of Homeland Security (DHS), and the Bureau of Justice Assistance (BJA).
What was the role of the original Privacy and Civil Liberties Oversight Board?
As required by Sections 1016 and 1061 of the IRTPA, the guidelines were developed in consultation with the White House Privacy and Civil Liberties Oversight Board. The Board was consulted as the guidelines were being developed and again during the interagency coordination process.

Federal Agencies

What is our first step for complying with the ISE Privacy Guidelines?
Each agency has already taken the first step by designating an ISE Privacy Official. This milestone was achieved on December 29, 2006.

How will we resolve issues that cut across federal agencies, such as questions about the application of the Privacy Act or about other federal legal requirements that affect more than one agency?
As called for by the ISE Privacy Guidelines, the establishment of an ISE Privacy Guidelines Committee (PGC) was announced by the Program Manager in November 2006. The committee’s membership includes the ISE Privacy Officials designated by each of the Federal agencies that are members of the Information Sharing Council. The committee seeks to ensure consistency and standardization in the implementation of the Privacy Guidelines, as well as serve as a forum to share best practices and resolve interagency issues. If an issue cannot be resolved by the PGC, the Program Manager will address the issue through the established ISE governance process. The PGC is not intended to replace legal or policy guidance mechanisms established by law or Executive Order or as part of the ISE and will, as appropriate, work through or in consultation with such other mechanisms.

Who has been designated to chair the ISE Privacy Guidelines Committee?
Pursuant to the PM-ISE’s designation, the cochairs of the ISE Privacy Guidelines Committee are Alexander W. Joel and Kenneth P. Mortensen. Alex Joel is the Civil Liberties Protection Officer for the Office of the Director of National Intelligence. Ken Mortensen is the Acting Chief of the Privacy and Civil Liberties Office of the U.S. Department of Justice. Alex Joel previously cochaired the interagency working group that drafted the ISE Privacy Guidelines, and Ken Mortensen served as a member of that group, representing the U.S. Department of Homeland Security.

Will we receive additional guidance and support for implementing the ISE Privacy Guidelines?
The ISE Privacy Guidelines Committee (PGC) has played a major role in providing ongoing guidance and support to federal agencies as they implement the Guidelines. In addition, the PM-ISE has funded an implementation support effort via the Bureau of Justice Assistance, Office of Justice Programs, U.S. Department of Justice. This effort is assisting the Program Manager and the PGC in providing guidance, information, and tools to ISE participants to support their implementation activities. For example, on September 10, 2007, the Program Manager provided the Privacy and Civil Liberties Implementation Guide for the ISE (Implementation Guide) to federal agencies. The Implementation Guide assists federal agencies in their efforts to ensure that the ISE is established and used in a manner that protects the information privacy and other legal rights of Americans. The Implementation Guide describes the processes for ISE participants to follow when integrating privacy and civil liberties safeguards into their information sharing efforts, including an assessment of whether current activities comply with the ISE Privacy Guidelines.
The Implementation Guide was developed through a collaborative interagency process by the PGC with the concurrence of the Information Sharing Council and is a further demonstration of the Administration's serious and continued commitment to protect the freedom, information privacy, and other legal rights of Americans in the development and use of the ISE. The ISE PGC is also assisting nonfederal ISE participants to develop and implement similar privacy protections.

Additional information can be found at www.ise.gov.

Can our agency's existing privacy policy comply with the ISE Privacy Guidelines?
Yes, the ISE Privacy Guidelines are designed as a set of core principles to be followed by federal departments and agencies. They require specific, uniform actions and the establishment of a governance structure to develop guidance and foster compliance. Agencies should identify and assess their existing privacy policies and procedures to ensure that they comply with all Privacy Guidelines requirements. The agency’s ISE privacy official has a leadership role in determining whether the agency’s privacy policies and procedures are fully compliant and, if not, establishing new or modified policies and procedures that protect information privacy and other legal rights.

If, as part of the rules assessment process called for in Section 2 of the ISE Privacy Guidelines, my agency finds that a change in its rules would be desirable, what should it do?
The ISE Privacy Guidelines anticipate that as part of its rules assessment, an agency may identify gaps in protections or may find bureaucratic restrictions that do not directly relate to legal requirements. Section 2(c) of the Guidelines sets forth a process for addressing such situations.

How should my agency deal with the legal exemptions that may apply to certain agency activities?
The ISE Privacy Guidelines recognize that certain agencies may enjoy exemptions and exceptions to various privacy protections or other legal requirements. These exemptions reflect public policy determinations made under our system of government. The Guidelines do not override applicable laws or exemptions. However, agencies are expected to review such exemptions as part of the rules assessment process, including evaluating whether the rationale underlying the exemption remains valid in the ISE context or whether any changes to established practice are needed. Agencies may effect such changes in practice pursuant to the process set forth in Section 2(c) of the Guidelines.

What data holdings must be identified and assessed for ISE access?
Agencies are required to identify and assess only those data holdings that contain protected information to be shared through the Information Sharing Environment.

State, Local, and Tribal (SLT) Agencies

Can nonfederal entities participate in the ISE?
Nonfederal entities can participate in ISE information sharing, including state, local, and tribal governments and private sector entities.
Are nonfederal entities required to comply with the ISE Privacy Guidelines?
The ISE Privacy Guidelines apply only to federal agencies and, therefore, do not directly impose obligations on nonfederal entities. However, Section 11 of the ISE Privacy Guidelines requires federal agencies to work with the PM-ISE and with nonfederal entities seeking to access protected information through the ISE to ensure that such nonfederal entities develop and implement “appropriate policies and procedures that provide protections that are at least as comprehensive as those contained in these Guidelines.”

How is the federal government helping state, local, and tribal authorities to share information?
State and regional fusion centers are a critical part of how state, local, and tribal authorities share information. Since 2001, the U.S. Department of Homeland Security (DHS) has provided funding via grant programs to support their establishment and the development of a baseline level of capability. The U.S. Department of Justice (DOJ) and DHS have developed extensive training and technical assistance programs to support the establishment and operation of these centers.

In addition, DOJ supports the Global Justice Information Sharing Initiative (Global), which serves as a Federal Advisory Committee (Global Advisory Committee [GAC]), advising the U.S. Attorney General on justice information sharing and integration initiatives. Global facilitates the broad scale, efficient exchange of justice and public safety information and promotes standards-based electronic information exchange to provide the justice community with timely, accurate, complete, and accessible information in a secure and trusted environment.

The GAC represents more than 30 independent organizations, spanning the spectrum of law enforcement, judicial, correctional, and related bodies. Its work is informed by a Criminal Intelligence Coordinating Council (CICC). Composed of members from law enforcement agencies at all levels of government, the CICC was originally established in 2004 to provide advice in connection with the implementation and refinement of the National Criminal Intelligence Sharing Plan (NCISP). Members of the CICC serve as advocates for local law enforcement and support their efforts to develop and share intelligence and information for the purpose of promoting public safety and securing our nation. The work of the GAC and the CICC has had a direct impact on the work of more than 1.2 million justice professionals.

Global initiatives include the development of technology standards, such as the Global Justice XML Data Model (Global JXDM); written products on data sharing issues, such as the NCISP; privacy policy development; and many others. Dissemination of information is via the Global Web site, www.it.ojp.gov/index.jsp.

Were state, local, and tribal government officials included in the planning of the ISE?
Yes. There was extensive consultation with and input from state, local, and tribal officials. This interaction included multiple meetings of the Information Sharing Council’s State, Local, and Tribal Subcommittee and participation in a number of meetings with key officials and stakeholder groups. State, local, and tribal officials were involved in the drafting of the ISE Implementation Plan Report.

How do state, local, and tribal governments obtain access to protected information in the ISE?
It is anticipated that the main focus of information sharing by federal agencies with state, local, and tribal governments will be via the network of state and regional fusion centers. The PM-ISE will establish a process for ensuring that such fusion centers develop and implement
appropriate policies and procedures for sharing protected federal information and intelligence with state, local, or tribal governments and private sector entities. Federal agencies will continue to disseminate time-sensitive information and other mission-specific information directly to their existing partners as appropriate. However, these direct communications will be coordinated both at the federal level and with the relevant state or regional fusion center. Additional information can be found at www.ise.gov.

**What information currently collected and maintained by my SLT agency is protected by the ISE Privacy Guidelines?**

As currently configured, the ISE Privacy Guidelines apply only to protected information. For nonintelligence agencies, protected information is defined as information about U.S. citizens and lawful permanent residents (LPRs) that is subject to information privacy or other legal protections under the U.S. Constitution and federal laws of the United States. For the Intelligence Community, protected information includes information about “United States Persons” as defined in Executive Order 12333. It may also include other information that the U.S. government expressly determines by Executive Order, international agreement, or similar instrument should be protected in the ISE. The Guidelines limit the sharing of protected information through the ISE to terrorism information, homeland security information, and law enforcement information.

**How does an SLT agency determine what protected information will be shared through the ISE?**

The ISE Privacy Guidelines establish a two-part process an agency should undertake to determine what protected information will be shared through the Information Sharing Environment:

1. By applying the definition of protected information to information identified as terrorism-related, the agency will determine whether particular data qualifies for ISE sharing.
2. By applying applicable law and policy, the agency then will determine whether the information can and will be shared through the ISE.

Once these determinations have been made, the specific ISE privacy protections (notice, data quality, security, etc.) must be applied to the data in order for it to be shared through the ISE.

**Is our SLT agency-approved privacy policy sufficient for ISE Privacy Guidelines compliance?**

The ISE Privacy Guidelines have been developed as a set of core principles for protecting information privacy. Agencies should review their existing privacy policies and procedures to ensure that they embrace these core principles and that they are at least as comprehensive as the Guidelines.

State, local, and tribal government agencies should strive to ensure that their information protection policies and procedures are at least as comprehensive as the ISE Privacy Guidelines. This effort will likely be implemented through processes established by the PM-ISE in conjunction with other federal agencies and state and regional fusion center representatives.

**Does compliance with 28 CFR Part 23 enable us to participate in the ISE?**

The Fair Information Principles and the operating principles contained within 28 CFR Part 23 were developed for different purposes than the requirements in the ISE Privacy Guidelines. Title 28 CFR Part 23 applies only to the collection, storage, and dissemination of criminal
intelligence information. The Guidelines apply to a broader universe of data. However, if an agency followed a process to become 28 CFR Part 23-compliant that is consistent with the core principles of the Guidelines and has developed procedures that are at least as comprehensive as those required by the Guidelines for all personally identifiable information held by the agency, the agency may be able to participate in the ISE.

**Does participation in a statewide fusion center meet the requirements to participate in the ISE?**
The PM-ISE, in concert with the U.S. Department of Justice and the U.S. Department of Homeland Security, will establish a process by which entities represented at fusion centers may conform their policies and processes to those required by the ISE Privacy Guidelines for participation in the ISE.

**Will SLT agencies that currently share information with federal agencies be able to continue sharing information in light of the ISE Privacy Guidelines?**
State, local, and tribal agencies that share a variety of information with federal agencies will be able to continue to share such information provided, of course, that such sharing is permitted by applicable laws and policies. With respect to ISE-protected information subject to sharing, all such agencies must diligently and promptly work toward developing and implementing policies and procedures that provide protections that are at least as comprehensive as those contained in the ISE Privacy Guidelines.

**Other Nonfederal Entities**

Apart from state, local, and tribal governments, what other nonfederal entities will be participating in the ISE?
IRTPA Section 1016 anticipates sharing by federal departments and agencies with state, local, and tribal governments, private sector entities, and foreign partners and allies.

Are private sector entities involved in the planning of the ISE?
Yes. Efforts to establish the ISE are being coordinated with information sharing activities delineated in the *National Infrastructure Protection Plan* as well as other efforts already under way by the U.S. Department of Homeland Security, the FBI, the Department of Defense, the Office of the Director of National Intelligence, and other federal entities.

What are the guidelines for sharing with private sector entities?
The ISE Privacy Guidelines establish that federal agencies and the PM-ISE will work with nonfederal entities, including private sector entities, to ensure that they develop and implement information protection policies and procedures that are at least as comprehensive as those contained in the Guidelines. To achieve this result, the PM-ISE is working with the private sector subcommittee of the Information Sharing Council and with other mechanisms established for public/private collaboration, such as those established by the U.S. Department of Homeland Security.

What are the guidelines for sharing with foreign partners?
The ISE Privacy Guidelines do not establish a framework for sharing protected information with foreign partners. Such sharing is addressed in the Guideline 4 Report—*Facilitate Information Sharing Between Executive Departments and Agencies and Foreign Partners*. In consultation with the Information Sharing Council, the PM-ISE’s role under IRTPA is to assist in developing policies and issue governmentwide procedures, guidelines, instructions, and functional standards that “(vii) address and facilitate, as appropriate, information sharing between Federal
departments and agencies with foreign partners and allies; and (viii) ensure the protection of privacy and civil liberties." (IRTPA, Section 1016 (f)(2)(B)).

Do the ISE Privacy Guidelines cover personally identifiable information about non-U.S. persons that is made available by foreign partners?
The ISE Privacy Guidelines apply to protected information. The definition of this term explicitly provides that protected information may also include other information that the U.S. government expressly determines by Executive Order, international agreement, or other similar instrument should be covered by the ISE Privacy Guidelines. Thus, personally identifiable information about non-U.S. persons would be covered by the Guidelines, if such an instrument were to so provide. This provides the U.S. government with the option, acting through appropriate channels, to extend ISE privacy protections to such information.

CIVIL RIGHTS AND CIVIL LIBERTIES PROTECTION

GUIDANCE

Requirement

The Information Sharing Environment (ISE) Privacy Guidelines, at Section 1(b), state that they “apply to information about United States citizens and lawful permanent residents that is subject to information privacy or other legal protections under the Constitution and Federal laws of the United States (‘protected information’).” (Emphasis added.) Section 2 of the ISE Privacy Guidelines, entitled “Compliance with Laws,” states as follows:

a. **General.** In the development and use of the ISE, all agencies shall, without exception, comply with the Constitution and all applicable laws and Executive Orders relating to protected information.

b. **Rules Assessment.** Each agency shall implement an ongoing process for identifying and assessing the laws, Executive Orders, policies, and procedures that apply to the protected information that it will make available or access through the ISE. Each agency shall identify, document, and comply with any legal restrictions applicable to such information. Each agency shall adopt internal policies and procedures requiring it to:

   (i) Only seek or retain protected information that it is legally permissible for the agency to seek or retain under the laws, regulations, policies, and executive orders applicable to the agency; and

   (ii) Ensure that the protected information that the agency makes available through the ISE has been lawfully obtained by the agency and may be lawfully made available through the ISE.

Purpose

This document does not create new or modify existing policy but, rather, provides guidance interpreting the above ISE Privacy Guidelines requirements and outlines possible methods or “best practices” to assist agencies in implementing this requirement. This guidance will be supplemented as the ISE matures and other technological recommendations are implemented.

General

As envisioned by the Intelligence Reform and Terrorism Prevention Act and stated in Homeland Security Presidential Directives 6 and 11, it is “the policy of the United States Government to share terrorism information to the full extent permitted by law” to support a wide range of prevention and disruption activities across the federal, state, local, territorial, tribal, foreign government, and private sector spectrum in a manner consistent with the provisions of the Constitution and applicable laws, including those protecting the rights of all Americans. The
Drafters of the ISE Privacy Guidelines recognized the importance of ensuring that ISE participants protect civil rights and civil liberties (CR/CL) (as well as privacy rights) in the ISE by developing appropriate policies and procedures. This Guidance paper is designed to serve as a vehicle to assist agencies in identifying the range of potential CR/CL issues that may arise in the ISE, provide recommendations to ISE participants regarding the manner in which they may address these issues through the development of ISE CR/CL policies and procedures, and discuss the legal basis for the recommendations. This will be especially important in developing a common understanding among the various parties that are expected to be ISE participants now and into the future.

By definition, the ISE is an approach that facilitates the sharing of terrorism-related information and does not prescribe rules or standards for the initial collection (acquisition) of protected information. However, any information shared in the ISE must have been lawfully collected by the acquiring agency. Nevertheless, the manner and the purpose for which information is collected, retained, and used by ISE participants may impact individual civil rights and civil liberties. Therefore, when developing policies and procedures governing ISE operation, participating agencies should ensure that civil rights and civil liberties are protected.

This Guidance is not meant to cover every possible CR/CL issue that may arise in the ISE. ISE participants are required to produce a written ISE privacy protection policy and are strongly encouraged to have policies and procedures that protect civil rights and civil liberties, consistent with mission requirements and tailored to the agency. Because there are some issues that will be common to many ISE participants, possible approaches to those issues are addressed in this Guidance.

This Guidance will not address individual states’ CR/CL laws and state constitutional limitations (which in many cases may impose different and sometimes higher standards than federal laws and the U.S. Constitution). In developing their policies and procedures for sharing information in the ISE, state, local, and tribal entities should consult their respective legal counsels or privacy and civil liberties officers to ensure consideration of such limitations when sharing, receiving, and using protected information.

Core Elements

Agency civil rights and civil liberties staff should address the following core elements in each agency’s ISE privacy protection policy:

a. A description of the existing agency legal and policy framework for the protection of CR/CL.

b. A description of policies, procedures, and personnel dedicated to identifying and addressing CR/CL issues pertaining to information acquisition, access, retention, production, use, management, and sharing.
c. A description of policies and procedures (as needed) developed and implemented for protecting CR/CL in the ISE that are not otherwise covered by existing policies and procedures.

**Additional Considerations**

a. Identify record-keeping practices and objectives that will ensure protection of CR/CL in the ISE.

b. Identify training needs for agency staff to protect CR/CL in the ISE.
BACKGROUND AND COMMENTARY

Background and Purpose

This Background and Commentary will consider how ISE participants’ information collection and subsequent use and sharing activities may implicate a person’s civil rights and civil liberties (CR/CL). This analysis will begin with definitions of the key terms civil rights and civil liberties and explore what steps may be needed to protect federal statutory and constitutional rights while simultaneously enhancing information sharing to combat terrorism. It will also provide guidance on and examples of common CR/CL issues that might be encountered by both federal and state, local, and tribal (SLT) ISE participants.

Understanding the Terms—Civil Rights and Civil Liberties

Although the full scope of the terms civil rights and civil liberties is subject to debate, participants in the U.S. Department of Justice’s Global Justice Information Sharing Initiative have defined the term civil liberties as follows:

The term civil liberties refers to fundamental individual rights such as freedom of speech, press, or religion; due process of law; and other limitations on the power of the government to restrain or dictate the actions of individuals. They are the freedoms that are guaranteed by the Bill of Rights—the first ten Amendments—to the Constitution of the United States. Civil liberties offer protection to individuals from improper government action and arbitrary governmental interference. 

For purposes of this paper, the term civil liberties also includes any rights and privileges not specifically delegated to the federal government by the people. This includes common law rights and “unenumerated rights” derived from a general presumption of freedom of individual action (i.e., action that is permissible unless expressly prohibited by law). Influential framer of the Constitution, Alexander Hamilton, believed these rights did not need to be expressly protected by the Bill of Rights because they were so self-evident that they did not need to be addressed in detail. The general concept of individual liberty and the limitations on the federal government’s powers that were expressly stated in the Constitution (“enumerated powers”) were recognized in the Ninth Amendment, which provides that the people retain rights beyond those specifically protected by the Constitution. When evaluating the impact of the ISE on civil liberties, it is important to keep in mind the legal and cultural importance of civil liberties in American life.

The Background and Commentary section is provided as a resource concerning the general principles applicable to each ISE Privacy Guidelines requirement addressed. This section neither establishes policy under the ISE nor is binding on any department or agency participating in the ISE. It is not a binding interpretation of law, regulation, or policy.

For purposes of this paper:

The term *civil rights* refers to those rights and privileges of citizenship and equal protection that the state is constitutionally bound to guarantee all citizens regardless of race, religion, sex, or other characteristics unrelated to the worth of the individual. Protection of civil rights imposes an affirmative obligation upon government to promote equal protection under the law. These civil rights to personal liberty are guaranteed to all United States citizens by the Thirteenth and Fourteenth Amendments and by acts of Congress. Generally, the term *civil rights* involves positive (or affirmative) government action to protect against infringement, while the term *civil liberties* involves restrictions on government.\(^{72}\)

**How Civil Rights and Civil Liberties Issues Might Arise in the ISE**

As noted above, CR/CL issues commonly arise in the acquisition of information (e.g., illegal search) and in its retention or use for unlawful or improper purposes (e.g., collection of First Amendment information that is not linked to criminal or national security activity). However, dissemination of information through the ISE is also a potential source of CR/CL violations as described below. Agencies should be mindful of these risks and seek to limit potential adverse consequences caused by the sharing of such information. Agencies should also be aware they may be subject to court order or agency policy requiring them to expunge or redact illegally or improperly acquired or retained information.

If information acquired in the ISE is not properly vetted and protected and its proper use controlled, then its dissemination to ISE partners may affect the CR/CL of individuals identified in that information. Information shared in the ISE includes terrorism information, homeland security information, and law enforcement information ("terrorism-related information").\(^{73}\) Given the national imperative to share terrorism-related information quickly and broadly, there may be times when such information is later determined to be inaccurate, incomplete, untimely, or irrelevant. As a result, its dissemination may contribute to an agency’s action that violates CR/CL and, the wider the distribution, the greater the risk of harm. Individuals identified or misidentified in the information may be subject to adverse action from a government agency or private sector entity, which disrupts their lives.

To examine in more detail how ISE sharing may implicate CR/CL, it may be helpful at this point to describe the primary liberties at issue under the constitutional provisions that preserve them.

\(^{72}\) This is a modified version of the definition contained in the *National Criminal Intelligence Sharing Plan* (NCISP), pp. 5–6.  
\(^{73}\) Definitions for these terms can be found in the *Privacy and Civil Liberties Implementation Guide for the Information Sharing Environment* (September 2007).
First Amendment

The First Amendment prohibits Congress from passing any law that prohibits the free exercise of religion or abridges freedom of speech, freedom of the press, the right of the people to assemble peaceably, or the right to petition the government for redress of grievances. The Supreme Court and the inferior courts have made it clear that this prohibition extends beyond legislation and includes the official acts of government officials, including the acts of agencies participating in the ISE. Although the courts have approved restrictions that limit the exercise of these rights as to time, manner, and place, any government act that has the effect of infringing any of these freedoms, absent a valid law enforcement or other mission-related purpose, is prohibited.

Allegations of First Amendment violations usually arise from direct contact between persons exercising those rights and law enforcement or regulatory authorities. However, sharing information through the ISE concerning the exercise of First Amendment rights could give rise to such a claim as well. If, for example, information is collected by an ISE participating agency identifying persons who participate in an antiwar protest group that appears to pose no threat to the national security, the mere act of sharing that information in the ISE, absent a legitimate law enforcement or national security purpose, may violate the First Amendment rights of those protestors. As another example, an agency collects a membership list of a religious or political organization that poses no national security or criminal threat. If the agency shares that information, the affected organization could reasonably claim that its First Amendment rights had been violated where the public disclosure of the information results in public derision or leads to regulatory restrictions that result in a significant drop in membership.

The foregoing is not intended to suggest that each dissemination in these examples was unlawful or unjustified. It does suggest, however, that because First Amendment violations can occur as a result of sharing information, ISE participating agencies should have explicit policies that prohibit the sharing of information in the ISE based solely on the exercise of rights guaranteed by the First Amendment and should require clear documentation of a valid mission purpose whenever information affecting these rights is shared in the ISE.74

Fourth Amendment

As a general rule, courts have held that dissemination of information from one federal agency to another does not implicate rights under the Fourth Amendment because the dissemination itself is neither a “search” nor a “seizure.”75 There are, however, two significant potential ramifications resulting from the sharing of protected information in the ISE that could affect an individual’s rights under the Fourth Amendment. ISE participants should be aware of these issues when formulating information sharing policies and procedures.

74 Subsection (e)(7) of the Privacy Act of 1974 is an example of a federal law that expressly limits the maintenance of records regarding the exercise of First Amendment rights, providing that: “Each agency that maintains a system of records shall…(7) maintain no record describing how any individual exercises rights guaranteed by the First Amendment unless expressly authorized by statute or by the individual about whom the record is maintained or unless pertinent to and within the scope of an authorized law enforcement activity.…”

First, sharing information about an individual that is subsequently determined to be materially inaccurate or misleading may indirectly implicate that individual’s Fourth Amendment rights if he or she is seized or his or her property is searched as a consequence of the erroneous information. This could occur, for example, when an individual is detained based on erroneous information or misidentification (e.g., at an airport or pulled over by a police officer on the public highways). For this reason, agencies that share information should make reasonable efforts to ensure that the information is accurate, complete, timely, and relevant prior to dissemination.\(^{76}\) In those instances where it is later determined that the information is erroneous, agencies that share information should employ timely notice and corrective procedures.

Second, if it is determined that information that has been shared was acquired in violation of an individual’s rights under the Fourth Amendment, the information may become the subject of an expungement order which, depending on the jurisdiction of the court issuing the order and the contents of the order, could apply broadly throughout the ISE (as discussed above). Such a determination could result from a suppression hearing in a criminal trial or an agency’s internal response to a complaint from the affected party. Information may also be determined to be erroneous or deficient, either from the time collected or due to changing factual circumstances. In any case, the aggrieved party may obtain an order to have the information expunged from agency records, and therefore, agencies may be under a legal or policy-driven obligation to provide notice of this consequence to other agencies with which the information has been shared. Agencies are encouraged to have in place robust data quality measures to facilitate compliance with court orders and to correct data errors when detected.

**Fifth and Fourteenth Amendments—Due Process**

The due process rights conferred by the Fifth and Fourteenth Amendments could be implicated if erroneous information about an individual is shared in the ISE and, as a result, leads to the denial of that individual’s entitlements, benefits, status, privileges, or rights granted by statute. This result may occur wherever a background check or other investigation is conducted prior to granting some benefit to the individual. Due process concerns may arise when the individual is not allowed to challenge the facts underlying the adverse action. This may occur when an individual is denied the freedom to travel or when the individual loses or is denied employment by an employer who receives and then acts upon the erroneous information. The process that is due such an individual may include the right to access information that may be used to his or her detriment and the right to request correction of that information if the individual believes the information is not accurate, relevant, timely, or complete. (See Footnote 11.) In those situations where information access is not available, an after-the-fact redress process, as discussed in the following section, may be necessary (See ISE Privacy Guideline, Section 8, and Redress Guidance, Privacy and Civil Liberties Implementation Manual, Key Issues Guidance at 76).

---

\(^{76}\) Subsection (e)(6) of the Privacy Act of 1974 requires that “Each agency that maintains a system of records shall ...(6) prior to disseminating any record about an individual to any person other than an agency, unless the dissemination is made pursuant to subsection (b)(2) [FOIA] of this section, make reasonable efforts to assure that such records are accurate, complete, timely, and relevant for agency purposes...” It is significant that this is one Privacy Act provision from which an agency may not exempt a system of records.
Due process issues involving the ISE may also arise when end users, relying on information shared in the ISE, deny individual rights. Federal agencies sharing information that could be used to deny constitutional rights should not rely on access and correction procedures as the only protective mechanism for minimizing the risk that action may be taken against persons based on inaccurate information. Redress should be part of the solution as a matter of policy—this is consistent with other rights, protections, and strategies that reduce agency liability. This is particularly true in the ISE, where many ISE participants are not subject to certain federal statutory disclosure requirements. Some information, for instance, may be classified or otherwise exempt from disclosure and individuals’ access to information about them, and correspondingly, their ability to contest the agency action will be severely limited.

If the quality of information shared in the ISE is not accurate or reliable, there is a risk that some individuals will mount broad challenges to security measures and information sharing activities. This may have a negative operational impact on ISE participants and end users. ISE participants are, therefore, encouraged to consider policies and procedures that define what reasonable efforts are appropriate to ensure that acquired information shared with other ISE participants is accurate, complete, timely, and relevant and to adopt redress procedures as discussed above.

Fourteenth Amendment—Equal Protection Under the Law

The Fourteenth Amendment provides that “No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws.” Under the Equal Protection Clause, it has been held that U.S. government employees and agencies are prohibited from engaging in invidious discrimination against individuals on the basis of race, ethnicity, national origin, or religious affiliation. This is further reflected and implemented for federal law enforcement in the U.S. Department of Justice’s Guidance Regarding the Use of Race by Federal Law Enforcement Agencies (DOJ Guidance). The standard articulated in the DOJ Guidance (and one that has a well-established basis in case law) is that investigative and intelligence information collection activities must not be based solely on race, ethnicity, national origin, or religious affiliation. In the ISE context, sharing information about an individual solely because he or she is of a certain race, ethnicity, or national origin or practices a certain religion would violate that individual’s constitutional right to equal protection. For this reason, agencies should consider adopting robust policies to ensure that information about individuals is collected for valid mission purposes (i.e., not solely due to those factors). Moreover, if it is later discovered that information was collected and subsequently retained solely on that basis, that it is not disseminated to other agencies in the ISE, and that if it has been disseminated, the originator should make reasonable efforts to ensure that recipients of the information are notified of the improper collection and delete or refrain from using the information. Given the complexity of equal protection law, agency personnel should seek legal guidance when questions relating to race, ethnicity, national origin, or religious affiliation, or related practices arise.

Investigations involving national security, race, ethnicity, national origin, or religious affiliation often provide links to individuals who pose terrorist threats. ISE participating agencies are urged
to develop policies to ensure that information shared with other ISE participants that draws such a connection is well-founded and based on reasonable inferences.

Other Individual Rights Issues

Unenumerated Rights

As noted above, the concept of civil liberties is much broader than those freedoms specifically enumerated in the Constitution. It includes the general presumption of freedom of action and the commonly recognized rights protected by federal statutory law, common law, and state law. Civil liberties may include a right to travel, to seek and retain employment, privacy, nondiscrimination in housing, and many other rights and freedoms that people take for granted. Even when the inconvenience or constraint imposed on a person’s activities does not amount to an infringement of constitutional rights, the sharing of inappropriate or inaccurate information in the ISE can have a consequential effect on an individual’s unenumerated rights. For instance, when erroneous information is shared and subsequently relied on by end users, an individual’s ability to travel or conduct lawful business may be impaired. Agencies participating in the ISE are urged to consider the potential unintended consequences on innocent individuals and to develop policies that minimize those consequences.

Statutory Rights—Personal Information Held by Third Parties

Certain types of information are lawfully retained by third parties and are regulated by statutory schemes that prohibit unauthorized disclosure. These include financial records subject to the Right to Financial Privacy Act, 12 U.S.C. § 3401; credit information subject to the Fair Credit Reporting Act, 15 U.S.C. § 1681; tax information subject to the Internal Revenue Code, 26 U.S.C. § 6300; telephone and Internet service records subject to the Electronic Communications Privacy Act, 18 U.S.C. § 2701; school records subject to the Family Educational Rights and Privacy Act, 20 U.S.C. § 1232g; and medical records subject to federal regulations issued pursuant to the Health Insurance Portability and Accountability Act, 45 C.F.R. Parts 160, 164. Although the Supreme Court has made it clear that there is no reasonable expectation of privacy in information disclosed to third parties, federal law restricts the U.S. government’s and some other governmental and private entities’ access to, and use and disclosure of such information. ISE participating agencies are encouraged to develop policies that treat this information as sensitive and to protect it from unlawful disclosure. Practices commonly used to safeguard sensitive information include physically or electronically securing sensitive information, limiting physical access to such information to those with a need to know the information, sound personnel security practices, and audit capability and implementation.

Building In Corrective Measures That Apply Specifically to Civil Rights and Civil Liberties

Data Quality

One of the most important steps that should be taken by participants in the ISE to protect civil rights and civil liberties is the implementation of robust data quality policies and practices. Data quality matters because erroneous data can negatively affect individuals who are subsequently investigated, stopped, or seized by law enforcement agencies acting in reliance on flawed data. Section 5 of the ISE Privacy Guidelines establishes three requirements to ensure data quality. First, federal agency ISE participants must implement policies and procedures designed to ensure the accuracy of data prior to sharing it in the ISE. Second, when protected information is identified that may be erroneous, the agency must inform the originating agency of the potential error. Third, participants must, consistent with legal authorities and mission requirements, adopt policies and procedures that protect individuals’ personally identifiable information. These include (1) steps to ensure that data-merging operations do not incorrectly merge one individual’s data into another person’s information, (2) procedures for timely investigation and correction of alleged errors and deficiencies, and (3) retaining protected information only so long as it is relevant and timely. In this instance, civil liberties interests are squarely aligned with operational interests because improving the integrity and quality of data relied upon by end users will ultimately improve their operational effectiveness.

Redress

ISE participants are required to provide some form of redress, in a manner that is compatible with legal authorities and mission requirements, to persons whose CR/CL may have been affected in the ISE. As the term is used in the ISE Privacy Guidelines, redress requires that each ISE participant develop and implement procedures to address complaints regarding protected information shared in the ISE. This includes not only complaints related to privacy rights (one of many civil liberties) but also complaints involving other CR/CL protected by the U.S. Constitution or other law. Potential requests for redress regarding important CR/CL issues might include complaints related to the failure to remove information from the ISE that has been expunged by a court of law or is determined to have been collected in violation of law or the U.S. (or a state) Constitution. It may at times also include requests for redress when erroneous information results in impairment of an individual’s ability to travel or conduct business. To the extent that a redress complaint is related to a terrorist watchlist issue, the Memorandum of Understanding on Terrorist Watchlist Redress Procedures (executed September 2007) would apply for those agencies that are signatories to that memorandum of understanding. Redress Guidance for information privacy and CR/CL issues has been developed by the ISE Privacy Guidelines Committee.78

78 ISE Redress Guidance is provided in Key Issues Guidance of the Privacy and Civil Liberties Implementation Manual (PM-ISE, 2007).
Expungement

If administrative measures such as redress do not prove satisfactory, a complainant may take his or her case to court, and the agency may find itself in receipt of a judicial order to expunge the records in question. Most states allow individuals who have not been convicted of a crime to have arrest records expunged under certain conditions. Some states also permit offenders to apply for expungement (a.k.a. erasure, destruction, sealing, setting aside, expunction, and purging) of certain criminal offense records after the expiration of a specific amount of time following the completion of their sentences. Grants of clemency and pardons may have similar effects on the individual’s criminal or arrest records.

Federal agencies may honor state court orders for expungement (and vice versa). For example, it is the practice of the FBI’s Criminal Justice Information Services Center (the entity that operates the National Crime Information Center [NCIC]) to honor state court orders or other authorized requests to expunge records. If, however, an ISE participant receives arrest record information from a state (and incorporates it in a terrorism-related information database) and a court in that state later expunges the record, ISE participants should have procedures in place for determining how federal agency recipients of the information will be notified of the order, ensure the expungement of the information from its records and, in turn, notify any other ISE participants with which it has shared the information.

Under federal law, there is a statutory remedy (18 U.S.C. § 3607(c)) for expungement of the disposition records of an individual found guilty of an offense under Section 404 of the Controlled Substances Act, 21 U.S.C. § 844. Although this is the only federal statute that expressly addresses expungement, federal judges exercising their equitable powers often grant this relief to individuals who have been arrested and later found to be innocent of any crime, provided they can also show that they have suffered significant adverse consequences because of the criminal record. In most jurisdictions, expungement is not limited to situations in which a constitutional violation or arrest was the result of unlawful action. See United States v. Paul Van Wagner, 746 F. Supp. 619 (E.D. Va. 1990). It is appropriate any time “the dangers of unwarranted adverse consequences to the individual outweigh the public interest in maintenance of the records.” (Diamond v. United States, 649 F.2d 496, 499 (7th Cir. 1981)). In order to ensure compliance with a federal court order expunging information shared in the ISE, agency information dissemination would need to be tracked (via manual log or an electronic audit trail, metatagging, or similar mechanism) in order to ensure compliance with the expungement order.

79 The Privacy Act of 1974, 5 U.S.C. § 552a, provides in Subsection (d) for individuals to have access to records about them contained in a system of records and to request amendment (correction) of such records that are not accurate, relevant, timely, or complete.

State, Local, and Tribal Laws and Regulations

It is important for state, local, and tribal governments to recognize that their own laws and regulations may impose higher standards regarding the protection of privacy and other civil rights and civil liberties than current federal law. It may be useful within the ISE to share
information on best state practices that are consistent with federal law and which advance federal CR/CL interests concurrently.

Case Law on Dissemination of Personal Information

The following briefly summarizes constitutional and statutory treatment of civil claims arising from the dissemination of personal information by government agencies. This summary is intended to serve as a tool to assist agencies in identifying the types of civil liberties issues that may arise in the Information Sharing Environment (ISE). Its only purpose is to stimulate ideas regarding these issues and is not intended to be an in-depth coverage of the relevant subject areas or the case law.

The Privacy Act of 1974, at 5 U.S.C. § 552a (e)(6), prohibits the dissemination outside of the federal government of inaccurate or misleading information to any person and provides no authority for an agency to exempt itself from this prohibition. While adverse characterization of a group in agency records is not actionable absent a showing of harm, some courts have found that federal law enforcement agencies have a duty to take reasonable steps to ensure the accuracy of records they disseminate. See New Alliance Party v. FBI, 858 F. Supp. 425 (S.D.N.Y. 1994) (describing national political party as a “cult”). For example, in a case decided before the Privacy Act of 1974 became law, the court in Tarlton v. Saxbe, 507 F.2d 1116 (D.C. Cir. 1974) found that the FBI’s failure to exercise a reasonable standard of care with respect to the accuracy of its records may implicate due process rights.

Similarly, dissemination of adverse information to local law enforcement or to the media that harms a group’s reputation and interferes with its ability to recruit new members or raise funds may violate the group members’ rights to speech, assembly, and to petition the government under the First Amendment. See Philadelphia Yearly Meeting of the Religious Society of Friends v. Tate, 519 F.2d 1335 (3d Cir. 1975); Socialist Workers Party v. Attorney General, 642 F. Supp. 1357 (S.D.N.Y. 1986); and Alliance to End Repression v. City of Chicago, 407 F. Supp. 115 (N.D. Ill. 1975). In addition, dissemination of an employee’s personal information concerning the exercise of First Amendment rights to his employer that leads to termination may be actionable. See Clark v. Library of Congress, 750 F.2d 89, 94 (D.C. Cir. 1984) (protecting government employees’ right to lawfully associate without the “potential for subtle coercion of the individual to abandon his controversial beliefs or associations”); Paton v. La Prade, 524 F.2d 862, 869–71 (3d Cir. 1975) (in case involving a First Amendment challenge to the collection and maintenance of records, court denied motion for summary judgment on mere potential that investigative record—in which student was cleared of wrongdoing—would lead to difficulty landing a job). Likewise, dissemination by U.S. Department of Defense investigators of records...

80 Subsection (e)(6) of the Privacy Act of 1974, 5 U.S.C. § 552a, expressly requires that: “Each agency that maintains a system of records shall...[(6)] prior to disseminating any record about an individual to any person other than an agency, unless the dissemination is made pursuant to subsection (b)(2) [FOIA] of this section, [the agency must] make reasonable efforts to assure that such records are accurate, complete, timely, and relevant for agency purposes....”
showing political activity by employees to their employers at an overseas military base was found to violate the employees’ First Amendment rights. (*Berlin Democratic Club v. Rumsfeld*, 410 F. Supp. 144 (D.C. Cir. 1976)).

Finally, in *Hobson v. Wilson*, 737 F.2d 1 (D.C. Cir. 1984), the Circuit Court for the District of Columbia found expungement to be a proper remedy for ensuring First Amendment protection when personal information was collected and maintained in FBI records in violation of the Privacy Act of 1974, notwithstanding the FBI’s argument that it needed to retain the records for present and future litigation defense purposes. In *Doe v. Webster*, 606 F.2d 1226 (D.C. Cir. 1979), to remove the mere possibility of inappropriate dissemination, the court directed the FBI to physically remove the record of a juvenile offender for an offense that a court had set aside under the Federal Youth Corrections Act and to respond in the negative to any and all inquiries concerning the set-aside conviction.

This case law summary will be updated, as necessary, to inform agencies of developments that may affect information sharing in the ISE.

**Template for Civil Liberties Policy Development**

This document is under development by the DHS Office of Civil Rights and Civil Liberties and will be included as a resource for agencies participating in the ISE when it is completed.
