### 1.2 - Permissible Values

The permissible values for this simple type are defined in the Controlled Value Enumeration: CVEnumISM25X.xml

**Table 1 - CVEnumISM25X Values**

CVEnumISM25X Values	
Value	Documentation
AEA	When using a source document that contains portions of Restricted Data (RD) or Formerly Restricted Data (FRD) where the RD/FRD source document(s) do not have declassification instructions, the derivatively classified document shall not contain a declassification date or event on the Declassify On line. The following shall be annotated on the Declassify On line: "Not Applicable or (N/A) to RD/FRD portions" and "See source list for NSI portions" separated by a period. The source list must include the declassification instruction for each of the source documents classified under E.O. 13526 and shall not appear in the classification authority block
NATO	Since NATO information is not to be declassified or downgraded without the prior consent of NATO, the "Declassify on" line of documents that commingle information classified by NATO and U.S. classified NSI, will read "N/A to NATO portions. See source list for NSI portions." The NSI source list will appear beneath the classification authority block in a manner that clearly identifies it as separate and distinct.
NATO-AEA	Handles special case of BOTH NATO and AEA as a single exemption.
